**REGULAR SESSION**

|      |                                                                                                                       |                          |
|------|-----------------------------------------------------------------------------------------------------------------------|--------------------------|
| 6:15 | 6. Roll Call                                                                                                          |                          |
|      | 7. Agenda Changes & Conflicts                                                                                         |                          |
|      | 8. Council Announcements                                                                                              |                          |
|      | 9. Citizens Appearing Before Council (for items not on the Agenda-comments limited to 3 minutes) and Council Response |                          |
|      | 10. Consent Agenda                                                                                                    | Discussion and/or Action |
|      | A. January 16, 2025 Council Minutes                                                                                   |                          |
|      | B. Planning and Zoning Commission Reappointments                                                                      |                          |
|      | C. Award Request for Proposal 2024-26P Fire Station Bay Exhaust Removal System                                        |                          |
|      | D. Award Request for Proposal 2024-27P Wulfsohn Road Asphalt and Concrete Project                                     |                          |
|      | E. Award Request for Proposal 2024-29P Coach Miller Drive and 14th Street Design                                      |                          |
|      | F. Award Request for Proposal 2024-30P Citywide Street Striping                                                       |                          |

- G. Intergovernmental Agreement with Garfield County Regarding the April 1, 2024 Municipal Election
- H. Second Amendment to Memorandum of Understanding with Habitat for Humanity
- I. Ordinance 2025-02; Changing the Name of the Street Tax Fund. Second Reading

#### **ACTIONS AND/OR PRESENTATIONS**

- |                                                                            |                          |
|----------------------------------------------------------------------------|--------------------------|
| 11. Youth Tobacco Use                                                      | Information/Discussion   |
| 12. Ordinance 2025-05; Budget Amendment #2 (One Reading)                   | Discussion and/or Action |
| 13. Planning File 21-24; Roaring Fork Transportation Authority 1041 Review | Discussion and/or Action |
| 14. South Bridge Update                                                    | Information/Discussion   |
| 15. Fire Evacuation Presentation                                           | Information/Discussion   |
| 16. Ordinance 2025-04; Model Traffic Code Cell Phones                      | Discussion and/or Action |
| 17. Financial Advisory Board (FAB) Grant Direction                         | Discussion and/or Action |
| 18. Council Comments                                                       |                          |
| 19. Report from City Administration                                        |                          |
| A. City Manager                                                            |                          |
| B. City Attorney                                                           |                          |
| C. Correspondence Incoming/Outgoing                                        |                          |
| 20. City Council Social Event Location                                     |                          |
| 21. Adjournment                                                            |                          |

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Resident Trash Removal Possibilities

**Action Requested:** Staff will present a couple of ideas to provide residents an option to dispose of large items conveniently, similar to the Spring Clean-up project we've done in the past.

**Department:** Public Works

**Presented By:** Matthew Langhorst

**Strategic Goals:** Protect and Preserve our Quality of Life  
Ensure Public Safety

**Background Info:** Staff believes that Council has received a significant number of requests to reinstate spring clean-up. This is a discussion about what we think is possible and its timing.

**Issues:** NA

**Fiscal Impact:** Unknown at this time

**Legal Review:** NA

**Staff Recommendation:** NA

|                              |                                                                                                                                                                                                                                             |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Agenda Item:</b>          | Council Onboarding                                                                                                                                                                                                                          |
| <b>Action Requested:</b>     | None at this time.                                                                                                                                                                                                                          |
| <b>Department:</b>           | City Administration                                                                                                                                                                                                                         |
| <b>Presented By:</b>         | Steve Boyd, Karl Hanlon                                                                                                                                                                                                                     |
| <b>Strategic Goals:</b>      | Provide Efficient and Responsive City Government                                                                                                                                                                                            |
| <b>Background Info:</b>      | Staff has been in the process of developing and improving the onboarding and operational activities of City departments to promote efficiency and effectiveness. We have a drafted an initial version of a handbook for City Council.       |
| <b>Issues:</b>               | With three new City Councilors being sworn in after the April election we wanted to ask the incumbent Council for an assist in pulling together a document that will help them acclimate to Council roles and responsibilities more easily. |
| <b>Fiscal Impact:</b>        | NA                                                                                                                                                                                                                                          |
| <b>Legal Review:</b>         | Legal partnered with administration to develop the onboarding procedures.                                                                                                                                                                   |
| <b>Staff Recommendation:</b> | NA                                                                                                                                                                                                                                          |

## **Authority, Conduct, and Action at Meetings**

### **City Charter**

The City Charter establishes the City of government structure, powers, and responsibilities. The Charter and changes to it are voted on by the registered voters of the City. The adoption of a charter is provided for in the State Constitution and charter cities are often referred to as “home-rule municipalities.” The City of Glenwood Springs operates under a Council/Manager form of government. Under the Council/Manager form of government the City Manager is responsible for the day-to-day administration of the City's operations, while the City Council is the policy-making body.

View the [City of Glenwood Springs Charter](#) through our Municipal Code Library.

### **Municipal Code**

A municipal code is a collection of laws, ordinances, and regulations that govern a municipality. The municipal code addresses a variety of local issues from tax implementation, utilities and land use. All changes to the Code must be made by ordinance. The passage of an ordinance requires two readings at two different meetings. The first reading of an ordinance is also a public hearing where the public may comment on any proposed ordinance. The City of Glenwood Springs Municipal Code includes ordinances enacted by City Council.

View the [Glenwood Springs Municipal Code](#) through our Municipal Code Library.

### **Scope of Authority**

The scope of authority and role of City Council is limited by both the Charter and the Municipal Code. Section 3.1 of the Charter provides:

*All powers of the City not otherwise limited or conferred upon others by this Charter shall be vested in a Council consisting of seven members. It shall have the power to enact and provide for the enforcement of all ordinances necessary to protect life, health, and property; to declare, prevent and summarily abate and remove nuisances; to preserve and enforce good government, general welfare, order, and security of the City and the inhabitants thereof, to enforce ordinances and regulations by ordaining fines and sentencing as established in Section 13.12 of this Charter; to provide for the granting of probation and the conditional suspension of sentences by the Municipal Court; and to delegate to boards and commissions, within limitations of the Constitution and this Charter, such functions, powers, and authority of the City as it deems proper and advisable. No enumeration of particular powers granted to the Council shall be construed to*

*impair any general grant of power herein contained or granted by the Constitution, nor to limit any such grant to powers of the same class or classes as those so enumerated.*

The Charter goes on to provide for the selection of Mayor, terms of office, qualifications, meeting timing, and compensation. These are further refined in the Municipal Code Articles 020.010 and 020.030.

In Charter Section 3.10 the relationship of the Council and the administration is defined. It provides:

*Except for the purpose of inquiry, the Council and its members shall deal with the administrative functions of the City solely through the City Manager and neither the Council nor any member thereof shall give orders to any of the subordinates of the City Manager.*

In the absence of an action taken by City Council delegating such authority, no individual member has the authority to act on behalf of the City, including directing staff, the City Manager, City Attorney or Municipal Judge, or to bind the City in any way. There are occasions where City Council delegates authority to a member of Council to act on its behalf, such as a member appointed to the Board of Directors of RFTA to act on behalf of Council. All employee matters except those positions appointed by City Council (City Manager, City Attorney, and Municipal Judge) are assigned to and the responsibility of the City Manager.

### **Conflicts of Interest**

Conflicts of interest are often as much about perception as they are about actual defined conflicts. The perception of impropriety can and often is as damaging to the credibility of City Council decisions as an actual conflict. When in doubt about a conflict-of-interest issue, it is always better to discuss the matter either with the City Attorney or with another Council member. Oftentimes disclosure of a potential conflict on the record will insulate a proceeding from challenge later. This is especially true for quasi-judicial proceedings.

The Municipal Code provides extensive guidance on this issue. View the Municipal Code [Article 020.040 - Conflicts of Interest](#) for detailed information.

### **Types of Actions by Council.**

Council actions can be separated into three categories: 1) administrative, such as approving contracts, hiring appointed officials, and setting utility rates; 2) legislative, such as adopting municipal code revisions or comprehensive plan amendments; and, 3) quasi-judicial, such as approving a zoning change affecting a single piece of property, a variance, a special use permit or a liquor license. With some exceptions, when Council is acting in its administrative or legislative role information gathering and debate can be more informal. When Council is acting

in it's a quasi-judicial role, process and procedures to ensure substantive and procedural due process are critical.

### ***Legislative actions***

Legislative actions primarily involve the adoption of ordinances which amend the code or set policy for the City. All ordinances require two readings and are effective 10 days after publication on second reading except for emergency ordinances which are effective upon passage on second reading. Legislative acts are subject to referendum when the matter is referred to the voters by either the Council or via petition. Legislation can also be initiated by petition. All ordinances require a public hearing, and the Charter lays out that the public hearing occur on first reading. If there are no substantive changes most ordinances are approved on second reading on the consent agenda.

### ***Quasi-judicial actions***

Quasi-judicial actions have three characteristics. They involve a state or local law that: (1) requires notice be given before the action is taken; (2) requires a hearing be conducted before the action is taken; and (3) requires that the application of specific criteria be applied to the individual facts of the matter before them.

When acting in a quasi-judicial role, Council is charged with being an impartial decision-maker. In order to ensure impartiality all decisions must be made only on information in the record (typically presented at the hearing or contained in written materials such as the application and staff report).

The City has adopted the following procedure for quasi-judicial hearings that is used by Council and any other board or commission with quasi-judicial authority:

1. Presentation by staff followed by questions (not comments) from the reviewing body.
2. Presentation by the applicant followed by questions (not comments) from the reviewing body.
3. Public comment.
4. Response, if any, from the applicant to public comment.
5. Comments or additional questions for staff and occasionally the applicant.
6. Motion followed by discussion.
7. Vote.

Although the process is important to the proper exercise of a quasi-judicial role, it is equally important to maintain the appearance of impartiality. Colorado law contains a presumption that quasi-judicial hearings are conducted impartially. This presumption, however, can be overcome with evidence of actual bias, conflicts of interest, personal or private interest, prejudgment, or ex

parte contacts. The appearance of impartiality of the Council can be affected by the actions of individual councilors. To maintain the impartiality of quasi-judicial hearings, Council members must attempt to avoid encountering pre-hearing information and, if contact is unavoidable, evaluate whether recusal is needed. When in doubt regarding an issue Councilors should contact the City Attorney.

## **Open Records and Open Meetings**

As a public official, you should assume that all correspondence, including email and text, is subject to the Open Records Act requiring public disclosure of those documents. In other words, do not commit anything to writing that you do not want the public to read or the newspaper to publish. There are exceptions to this, including some types of work product and material that is attorney-client communication.

The Open Meetings Act requires public notice of all meetings attended by more than two (2) elected officials. This includes not only in-person meetings but email communications and discussions involving more than two (2) councilors as well as conference calls. As a result, keeping the City Clerk informed regarding event attendance is important to avoid statutory violations.

## **Prohibited Gifts**

In November 2006, the Colorado electorate adopted Amendment 41 adding a new Article XXIX to the Colorado State Constitution. That Article created gift limitations for state and local government officials and employees. One section of Amendment 41 exempted home rule municipalities from the application of the new Article XXIX if the municipality had other provisions in place (charter, ordinance, resolution) to address those matters. City Council adopted Ordinance No. 8, Series 2007 adding Article 010.060 that defines what constitutes a prohibited gift to city officials (defined to include a Councilmember, Board or Commission member, and employee).

The rule states that any gift is prohibited if it could improperly influence the official to depart from faithful and impartial discharge of the official's duties or if its primary purpose is to reward an official's action. The Municipal Code provides extensive guidance on this issue. View the Municipal Code [Article 010.060 - Prohibited Gifts to City Officials](#) for detailed information.

## **Conduct and Procedures for Meetings**

All regular meetings, special meetings, work sessions, and conference sessions of the City Council are noticed public meetings and open to the public. The City Council may conduct an executive session under limited exceptions.

## **Regular Meetings**

Regular Meetings are held in Council Chambers at City Hall on the first and third Thursdays of each month unless otherwise designated. Meetings convene at 6:15 p.m. and per the Municipal Code must adjourn no later than 11:00 p.m. unless a later time is agreed upon by a unanimous vote of all Council Members present at said meeting. In the event one or more agenda items have not been called before 11:00 p.m. and unanimous approval for extension of the meeting has not been obtained, such items shall be automatically continued to the next regular City Council meeting or a special meeting called per the Charter.

## **Special Meetings**

Special meetings of the Council shall be called by the City Clerk on the written request of the Mayor, or any two members of the Council, on at least twenty-four hours' written notice to each member of the Council. A special meeting may be held on shorter notice if all members of the Council are present or have waived notice thereof in writing.

## **Work Sessions**

Work sessions may be held at such time and place as a majority of the members may determine. At a work session, no formal vote shall be taken on any matter under discussion, nor shall any member enter a commitment with respect to a vote to be taken subsequently in a formal meeting. To encourage the interchange of ideas at work sessions, it shall be a standing policy that individual members are not quoted on ideas that they propose. Minutes of these proceedings are not required.

## **Conference Sessions**

The Mayor or the City Manager may call the Council together for a conference session at any time deemed necessary. Each conference session shall be devoted exclusively to matters regarding which the interchange of information preliminary to public action is deemed to be essential. Conference sessions may be held prior to regular or special meetings at such time and place as a majority of the members may determine. No formal vote shall be taken during a conference session on any matter under discussion, nor shall a Council member enter a commitment with another respecting a vote to be taken subsequently in a formal meeting. To encourage the interchange of ideas at conference sessions, it shall be a standing policy that individual members are not quoted on ideas that they propose. Minutes of these proceedings are not required.

## **Executive Sessions**

Executive sessions may be conducted only during a regular or special meeting of City Council; in accordance with Open Meetings Act, no final policy decision, resolution, rule, regulation,

formal action, or any action approving a contract, or calling for the payment of money shall be adopted or approved at any executive session. Executive sessions are only for consideration of the following:

- Consideration of employment matters related to the City Manager, City Attorney, or Municipal Judge.
- Legal matters that are attorney-client privileged.
- Discussions with the Chief of Police, District Attorney, or their appointed representatives on matters relating to security.
- To determine the City's position relative to issues that may be subject to negotiation, to receive reports on negotiation progress and status, to develop strategy, and to instruct the City's negotiators.

### **Agendas for Council Meetings**

The Municipal Code provides that the City Clerk and City Manager are responsible for setting and assembling the agenda and providing packets to the Council no later than noon on the Tuesday preceding the Thursday of each regular meeting of the City Council. In practice Council packets go out electronically the Friday preceding the next Council meeting. Matters to be considered at special meetings shall be only those as stated in the notice for the meeting.

*Agendas are organized as follows:*

#### **WORK SESSION**

| TIME | ITEM                           | ACTION |
|------|--------------------------------|--------|
| 1.   | <i>Subject of Work Session</i> |        |

#### **REGULAR SESSION**

2. Roll Call
3. Agenda Changes & Conflicts
4. Council Announcements
5. Citizens Appearing Before Council (for items not on the Agenda- comments limited to 3 minutes)
6. *Council Reaction to Citizen Comments*
7. *Consent Agenda*

*All matters under consent are considered to be routine and will be enacted by one motion and vote. The titles will not be read aloud. There will be no separate discussion on these items unless a Councilmember or Audience Member so requests.*

#### **ACTIONS AND/OR PRESENTATIONS**

8. [Any Action items or Presentations]

9. Council Comments
10. Report from City Administration
  - A. City Manager
  - B. City Attorney
  - C. Correspondence Incoming/Outgoing
11. Council Social Event Location
12. Adjournment

## **Presiding Officer**

The Mayor is the presiding officer at the City Council meetings. In their absence, the Mayor Pro Tem takes the chair of City Council. In the absence of the Mayor and Mayor Pro Tem, the City Clerk shall call the Council to order, and a temporary chairman is elected by the members of the Council present. Upon arrival of the Mayor at the meeting, the Mayor Pro Tem, if then presiding, shall relinquish the chair upon the conclusion of the business immediately before the Council. If a temporary chairman is presiding, they shall relinquish the chair upon the conclusion of the business immediately before the Council to the Mayor or Mayor Pro Tem upon the arrival of either.

## **Conduct of City Council Meetings**

### ***Public Comment for items not on the agenda.***

Council accepts public comment for items not on the agenda in writing or in person at a City Council meeting. Public comment is limited to 3 minutes. Comments should be directed to the Council not the audience. Council generally does not directly engage with public commentators but may provide reactions or comments under the “Reactions to Public Comment” agenda item.

### ***Public Comment on items on the agenda.***

Council generally accepts comments on any item on the agenda. Public comment is required for public hearings which primarily includes ordinances and land use matters. Public comment is limited to three minutes unless the Presiding Officer sets a greater limit. Comments must be directed to the Council and must address the item being considered. In person, in writing, and online comments are accepted for specific agenda items.

Meetings generally utilize a simplified Robert’s Rules of Order to govern debate, motion and decisions on matters except for quasi-judicial public hearings which utilize the procedures outlined above.

### ***Voting by the Council.***

- The City Clerk shall call the vote.

- All voting upon ordinances, resolutions, and motions shall be in conformity with the Charter.
- Except as otherwise provided in the Charter or in this Code, a motion shall be deemed carried if a quorum is present and a majority of those voting vote "yea."
- No affirmative action may be taken upon a tie vote; and, in the event the matter being voted upon action of Council, including but not limited to, liquor licenses and items pursuant to Title 070, a tie vote shall be considered to be a denial of the matter.
- In the event a Council member abstains the Charter provides that their vote is recorded as a "yea."
- Council Members not entitled to vote on a motion because of personal or private interest shall be deemed present for purposes of determining whether there is a quorum present.

### ***Types of motions***

- Main Motion: Introduce a new item.
- Subsidiary Motion: Change or affect how to handle a main motion (vote on this before the main motion).
- Privileged Motion: Urgent or important matter unrelated to pending business.
- Incidental Motion: Questions procedure of other motions (must consider before the other motion).
- Motion to Table: Kills a motion.
- Motion to Postpone: Delays a vote (can reopen debate on the main motion).

***Robert's Rules of Order Cheat Sheet***

| <b>Action</b>                                         | <b>What to Say</b>                                           | <b>Interrupt Speaker?</b> | <b>Need a Second?</b> | <b>Can be Debated?</b> | <b>Can be Amended?</b> | <b>Votes Needed?</b> |
|-------------------------------------------------------|--------------------------------------------------------------|---------------------------|-----------------------|------------------------|------------------------|----------------------|
| <b>Introduce main motion</b>                          | "I move to..."                                               | <b>No</b>                 | Yes                   | Yes                    | Yes                    | Majority             |
| <b>Amend a motion</b>                                 | "I move to amend the motion by..." (Add and/or strike words) | <b>No</b>                 | Yes                   | Yes                    | Yes                    | Majority             |
| <b>Move item to committee</b>                         | "I move that we refer the matter to committee."              | <b>No</b>                 | Yes                   | Yes                    | <b>No</b>              | Majority             |
| <b>Postpone item</b>                                  | "I move to postpone the matter until..."                     | <b>No</b>                 | Yes                   | Yes                    | <b>No</b>              | Majority             |
| <b>End debate</b>                                     | "I move the previous question."                              | <b>No</b>                 | Yes                   | Yes                    | <b>No</b>              | Majority             |
| <b>Object to procedure</b>                            | "Point of order."                                            | Yes                       | <b>No</b>             | <b>No</b>              | <b>No</b>              | Chair decision       |
| <b>Recess the meeting</b>                             | "I move that we recess until..."                             | <b>No</b>                 | Yes                   | <b>No</b>              | <b>No</b>              | Majority             |
| <b>Adjourn the meeting</b>                            | "I move to adjourn the meeting."                             | <b>No</b>                 | Yes                   | <b>No</b>              | <b>No</b>              | Majority             |
| <b>Request information</b>                            | "Point of information."                                      | Yes                       | <b>No</b>             | <b>No</b>              | <b>No</b>              | No vote              |
| <b>Overrule the chair's ruling</b>                    | "I move to overrule the chair's ruling."                     | Yes                       | Yes                   | Yes                    | <b>No</b>              | Majority             |
| <b>Extend the allotted time</b>                       | "I move to extend the time by _____ minutes."                | <b>No</b>                 | Yes                   | <b>No</b>              | Yes                    | 2/3 Vote             |
| <b>Enforce rules or point out incorrect procedure</b> | "Point of order."                                            | Yes                       | <b>No</b>             | <b>No</b>              | <b>No</b>              | No vote              |
| <b>Table a motion</b>                                 | "I move to table..."                                         | <b>No</b>                 | Yes                   | <b>No</b>              | <b>No</b>              | Majority             |

## **Council Norms and Expectations.**

### **Attendance.**

Section 3.5 of the Charter states that a Councilmember's office becomes vacant when they are recalled, become incapacitated, resigns or misses three consecutive meetings or moves out of the City. *Charter Sec. 3.5*. Council members typically advise the Mayor, City Manager and the City Clerk if they are going to be absent from a meeting. Keeping everyone informed is critical to ensure that there is a quorum for meetings. The Council did adopt a remote participation policy during COVID which remains in place to allow Council members to participate under limited circumstances if they will be absent or are sick. Except in instances where a quorum cannot be met any other way Council members should not feel obligated to attend when they are vacationing, away for work, or under the weather. While not required by the Charter or Municipal Code Council members are expected to attend work sessions. Often work sessions are critical for Council members to receive information, ask questions and dive more deeply into issues before formal consideration at a future Council meeting. Examples of this are looking at rate studies, drafts of planning documents and reviewing projects.

### **Communication with Staff.**

1. Questions to City staff should be directed through the appropriate senior City staff. Questions should be directed to the City Manager or senior staff.
2. The City Manager should be copied on any request or communication to Department Heads. Council members should not set up meetings with department staff directly but work through Department Heads who will attend any meetings with council members. When in doubt about what staff contact is appropriate, council members should ask the City Manager.
3. All Council members should have the same information with which to make decisions.
4. Council members, including the Mayor, should not get involved in administrative functions. Avoid any staff contacts that may be construed as trying to shape staff recommendations. Council members shall refrain from coercing staff in making recommendations to the Council as a whole.
5. Do not attend staff meetings unless requested by senior staff. Even if the Council member does not say anything, the Council member's presence may imply support, show partiality, intimidate staff or hamper staff's ability to do their job objectively. Additionally, in such circumstances, individual council members are receiving information prior to the rest of the Council.

6. If a council member wishes to attend a meeting related to City business, as a representative of the City (negotiating session, staff committee meeting etc.), the council member shall obtain approval of the Council prior to the meeting with the understanding that the council member will report back to the Council regarding the meeting. The report shall be given at a regular meeting of the Council held in open session. Council members attending meetings of boards, committees or commissions on which they serve do not need to obtain prior approval of the Council.
7. Depend upon the staff to respond to citizen concerns and complaints. It is the role of council members to pass on concerns and complaints on behalf of their constituents. It is not appropriate to pressure staff to solve a problem in a particular way. Refer citizen complaints to the appropriate senior staff or City Manager. Staff is responsible for making sure the council member knows how the complaint was resolved.

### **Communication with the press and public.**

It is primarily the responsibility of the Mayor to communicate with the press on specific issues before Council, decisions by Council and other requests the press may have of the Council. The Council has adopted a communication policy which is available here [\[insert link\]](#).

Communication with constituents is the responsibility of individual Council members consistent with the communication policy.

### **Decorum during meetings.**

It is the goal of Council to fairly and openly debate and decide issues before it. In order to do that the presiding officer is responsible for recognizing members who wish to speak, both calling attention to and if necessary, cutting off members who are engaged in personal attacks of the public, staff or other Council members and to maintain an orderly meeting. The presiding officer may additionally call a recess, or in extreme circumstances adjourn a meeting if in the presiding officers' judgment, it is necessary to maintain a safe and courteous environment for the public, staff, or the Council.

### **Security.**

Staff will brief Council separately on security issues.

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Micro Transit

**Action Requested:** None.

**Department:** Engineering

**Presented By:** Ryan Gordon, Lee Barger

**Strategic Goals:** Preserve and Improve Infrastructure

**Background Info:** The City will be beginning an 8-month pilot program for city-wide On-demand transit service provided by the Downtowner starting in April 2025. This service will be called Ride Roaring Fork - Glenwood Springs and will be accessible under a valley-wide common mobile application known as Ride Roaring Fork. As a pilot program, it will be introduced as a fare-free service for six months, at which point we will have the data to develop a fee structure that would be favorable towards customers connecting to or from the Ride Glenwood local and RFTA regional routes, and other identified routes that make sense to incentivize. Staff understands the challenges of finding a sustainable funding source for this service, so we are using this pilot to provide staff with ample origin/destination/ridership data to be provided by the Downtowner service.

The service will start with 4-5 vehicles including Wheelchair Accessible Vehicles. Times/days of service will be similar to the Downtowner service in Carbondale. Staff is in discussions with the Downtowner and will provide finer details at a later work session as we get closer to launch. The Downtowner is currently operating in Aspen, Basalt and Carbondale, and is made possible from a three-year start-up grant from Roaring Fork Transportation Authority (RFTA).

**Issues:** N/A

**Fiscal Impact:** N/A

**Legal Review:** N/A

**Staff Recommendation:** N/A

# **DOWNTOWNER PILOT PROGRAM**

## **Town of Carbondale**

**February 6, 2025**

**Jared Barnes, AICP**  
Planning Director

**Lauren Gister**  
Town Manager

511 Colorado Avenue, Carbondale, CO 81623  
(970) 963-2733 Fax: (970) 963-9140

# PILOT PROGRAM CONTRACT

- **6-month pilot program: July – December 2024**
- **FLMM Funding Partnership – RFTA/Town**
  - **\$18K set up costs (100% Town)**
  - **\$60K/month operating (50/50 split)**
  - **Pilot Total - \$378K; Town - \$198K + incidentals**
- **Service Hours: M-F, 7AM-10PM; Sa-Su, 9AM-10PM**
- **2 vehicles in service, 1 spare vehicle**
- **Average wait time: 20 minutes**
- **Average trip time: 15 minutes**

# PILOT PROGRAM STATS

- **Steady monthly growth**
  - **July**
    - 1,128 rides
    - 278 unique acnts
    - 5 min avg wait time
    - 7% shared rides
    - 2.3 psngrs/rev hr
  - **December**
    - 5,406 rides
    - 734 unique acnts
    - 11 min avg wait time
    - 43% shared rides
    - 9.4 psngrs/rev hr
- **479% growth in rides**
- **264% growth in accounts**

# GROWING PAINS

- **Ridership growth has created some operational pinch points:**
  - **Long waits (30-50min) during peak travel times (3-7pm)**
  - **Tough to plan trips (wait time could be 5-45 min)**
- **School service**
  - **Town prohibited trips from schools, but lots of travel from students throughout the day from the closest point (Carbondale Fire District Admin Building)**
- **Information about service**
  - **Map of service area is confusing**
  - **Town website/app doesn't include policies**

# LESSONS LEARNED

- **Initial set up**
  - **Required significant local staff resources**
    - **Bilingual translation**
    - **Outreach/Awareness**
  - **Appropriate vehicle size**
- **Determine service priorities and goals before starting service**
  - **Helps to develop check point on requested changes**
- **Determine fare-free or fare-collected**
  - **Could be hard to charge for something that was free**
- **Long-term funding considerations after 3-year FLMM grant**

# LESSONS LEARNED

- **School Service – getting stuck in school traffic which delays other trips**
- **Monthly Reporting – important data (e.g. Age, Drop-off/Pick-up locations, cost/rider).**
- **Policy Decisions**
  - **Pets**
  - **ADA and mobility-limited accessibility**
  - **Child seats**
  - **Sporting Equipment**

## **Carbondale Ridership Report**

### **December 2024**

#### **General Stats**

**Rides:** 5,406  
**Passengers (unlinked passenger trips):** 7,625  
**Vehicle revenue hours:** 814  
**Total vehicle hours:** 872  
**Vehicle revenue miles:** 9,131  
**Total vehicle miles:** 9,260  
**Passenger miles:** 8,491  
**Unique rider accounts:** 734  
**Passengers per revenue hour:** 9.4  
**Percent of rides shared:** 43%  
**Average wait time:** 11 minutes  
**Average ride distance:** 1.2 miles  
**Average experience rating:** 4.9 out of 5  
**Wheelchair rides:** 48  
**No shows:** 138

#### **Wait Time Distribution**

**0 - 10 min:** 56%  
**10 - 20 min:** 31%  
**20 - 30 min:** 10%  
**30+ min:** 3%

## All-Time Ridership

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Housing Priorities and Regulatory Standards

**Action Requested:** Discussion of regulatory standards

**Department:** Economic and Community Development

**Presented By:** Hannah Klausman

**Strategic Goals:** Provide Efficient and Responsive City Government

**Background Info:** Regulatory Standards, Development Code and Engineering Standards, Process  
Staff has received feedback from Council and the public that the regulatory standards and processes for approval surrounding smaller projects warrants review.

Staff has attached several process guidelines to illustrate common administrative and public hearing processes from the Planning Department.

Title 070 of the Municipal Code details the requirements and allowances for all development in Glenwood Springs, from Single Family Homes to multi-storied apartment complexes and commercial facilities. The main categories of Development Standards include:

**ARTICLE 070.040 - DEVELOPMENT STANDARDS**

**070.040.020 - Sensitive Area Protection.**

Intended to protect and enhance the natural features and ensure that land subject to natural hazards such as flooding, falling rock, landslides, mud flows, or snowslides is not approved for development without safeguards to help protect life, health, and property.

**070.040.030 - Site Development and Improvement Standards.**

This Section is intended to ensure that a developer shall install appropriate infrastructure, preserve vegetation; stabilize soil, reserve and dedicate any easements for drainage purposes, pedestrian easements, and parkland; and ensure the completion of installation of curbs, gutters, street paving, and other improvements and to ensure that dedications are made.

**070.040.040 - Common Open Space.**

Common open spaces are set aside for the use and enjoyment of a development's residents, employees, or users. The percentage of required open space is determined by zone district.

**070.040.050 - Landscaping, Screening, and Fencing.** The purpose of this Section is to ensure that landscaping, screening, and fencing is provided to protect and enhance the visual appeal of Glenwood Springs; improve air quality; buffer neighboring land uses; mitigate the environmental and visual impacts of surface parking areas; protect residential and commercial property values; and extend water supply and water infrastructure by enhancing efficiency and eliminating outdoor water waste.

**070.040.060 - Off-Street Parking and Loading.** The purpose of this Section is to ensure that safe and convenient parking areas are provided to respond to transportation and access demands of various land uses throughout the City, mitigate traffic congestion, avoid and mitigate the adverse visual impact of large concentrations of exposed parking, reduce stormwater runoff and heat island effect from large expanses of pavement, and improve water quality, provide necessary access for service and emergency vehicles; and provide for safe and convenient interaction between vehicles and pedestrians.

**070.040.070 - Access and Circulation.**The purpose of this Section is to support the creation of a highly connected transportation system within the City in order to provide choices for drivers, bicyclists, and pedestrians; increase effectiveness of local service delivery and reduce emergency service times; create connectivity, reduce vehicle miles of travel; improve air quality; mitigate the traffic impacts of new development; and avoid the creation of large, isolated tracts without routes for through traffic or pedestrian and bicycle connections.

**070.040.080 - Residential Site and Building Design.**This Section is intended to promote high quality development and construction, protect the character of established neighborhoods, encourage a variety of housing choices and affordability levels, provide visual interest in exterior design, enhance streetscapes, and protect property values.

**070.040.090 - Nonresidential and Mixed-Use Site and Building Design.**This Section is intended to promote high-quality building design and is intended to promote visual interest, ensure compatibility between residential and adjacent commercial uses, mitigate large bulk of large buildings, promote multi-modal access, enhance property values and encourage further investment.

**070.040.100 - Exterior Lighting.***Purpose.* The purpose of this Section is to provide for exterior lighting that enhances safety, preserves the City's nighttime character, and improves the ability to view the nighttime sky from within the City. This Section is intended to decrease light pollution, increase energy efficiency, and promote high quality lighting design as it relates to the built environment.

**070.040.110 - Signs.**The purpose of this Section is to minimize incompatibility between signs and their surroundings, provide for signs within reasonable limitations, consistent with the goals and objectives of the community, to retain the special character and economic advantages that rest largely on the quality of the community's appearance; eliminate hazards caused by the size and placement of signs, and protect the right to free speech.

#### **ARTICLE 070.045 - COMMUNITY HOUSING STANDARDS AND GUIDELINES—ADMINISTRATION**

The purpose and intent of the regulations set forth in this article is to increase affordable housing choices for year-round residents and to preserve a balance between second homeowners and locals.

#### **Engineering Standards**

Additionally, projects are required to adhere to the Engineering Standards available at [www.cogs.us/Engineering-standards](http://www.cogs.us/Engineering-standards), which include requirements for submittal of detailed technical reports such as drainage plans, grading plans, geohazard reports, traffic reports, and stamped engineered drawings of some site components such as retaining walls and water detention facilities. These aspects of a project proposal are not known until the technical reports are completed often leading to discovering issues with the property such as being in a geohazard area requiring mitigation, steep slope grades that aren't feasible for site elements, and inadequate square footage to fit desired project components.

Staff has also included the Construction Management Plan checklist that is utilized during the building permit process as an attachment to this report.

#### **Issues:**

**Fiscal Impact:** Regulations have impacts on the cost of construction. Those costs vary.

**Legal Review:** N/A

**Staff Recommendation:** Staff defers to Council to discuss areas that are deemed appropriate to review for changes to regulation or process standards.

## **Minor Subdivision Application Guide & Checklist**

Economic & Community Development Department  
101 W. 8<sup>th</sup> Street  
Glenwood Springs, CO 81601  
(970) 384-6411

### **PURPOSE**

The Minor Subdivision review is an administrative process used to evaluate proposed subdivisions that will create few lots or involve minimal adjustments to approved final plats. The Minor Subdivision procedure also provides an administrative process to correct plat errors and to adjust property boundaries.

### **GENERAL OVERVIEW**

The Minor Subdivision review applies to:

- Properties within an approved preliminary plat;
- Subdivisions creating 3 or fewer lots or 10 or fewer condominium units within a single plat; and
- Condominiumizations within an existing building that do not include land dedication.

The following types of projects can be processed as minor subdivisions:

1. Consolidation of two or more lots into a single lot on a single, previously recorded final plat;
2. Boundary or lot line adjustment to an approved final plat; or
3. Correction of errors on an approved final plat.

**Land dedication.** Any subdivision or adjustment that involves dedication to the City of right-of-way, other public tracts, or public improvements shall be reviewed by City Council for acceptance or denial of the dedication.

**Condominiumizing an existing building.** If you are condominiumizing an existing building, the Community Development Director may require that you bring the property into compliance with the Municipal Code and ordinances as necessary to safeguard public health, safety and welfare.

### **REVIEW PROCESS**

All Minor Subdivision applications are reviewed and decided upon by the Community Development Director and shall follow the procedures outlined below. The Director will consider whether the minor subdivision -

- a. Is consistent with the Comprehensive Plan;
- b. Is consistent with the intent of the underlying zoning district;

- c. Complies with applicable dimensional, development, and design standards in the Code;
- d. Does not affect a recorded easement without approval from the easement holder;
- e. Will not result in adverse impacts to surrounding property; and
- f. Will not limit the City's ability to effectively provide facilities or services.

1. **Pre-application Conference.** Contact one of the planners in the Community Development Department prior to submitting your Minor Subdivision application. We will discuss the administrative review procedures, application requirements, decision timelines, and the City's goals, policies, and development standards as they relate to your proposed project.

At least 10 days prior to your scheduled conference, please submit one electronic copy of the following items:

- a. A completed Planning Application. The application is available [here](#), or on the City's website at [www.cogs.us](http://www.cogs.us). It is in "Forms, Permits & Applications" on the Community Development Department page.
- b. A written description of the proposed project.
- c. Conceptual drawings showing the location, layout, and primary elements of the proposal.
- d. Proposed uses, location of uses, and densities.

If your project involves more than one administratively reviewed development action for the same property, your applications can be processed concurrently. Community Development Department planners will discuss the concurrent review process and application requirements with you during your pre-application conference

2. **Prepare Your Application.** During the pre-application conference you will receive a checklist of information that we will need to process your request. This information constitutes your application and may include any, or all the information found on page 5 of this guide.

City staff will evaluate your application based on how well it demonstrates compliance with the Municipal Code, and the City's goals, policies, and plans. You may review the Municipal Code on the City's website at [www.cogs.us](http://www.cogs.us). Other approved plans also can be found on the City's website under the individual department pages. Community Development staff will help guide you to plans and policies that may be applicable to your project.

3. **Submit Your Application.** Submit an electronic copy of your completed application to the Community Development Department on or before the 8-week application deadline. Within 5 business days of your submission, Community Development Department staff will review your application to determine whether it is complete. If it is incomplete, we will

contact you with a list of the information needed to complete your application. You are encouraged to submit your application well in advance of the application deadline to allow you time to supply any missing information. Submissions after the deadline will delay your review and decision.

- 4. Provide Additional Copies.** After Community Development Department staff deems it complete, you will be asked to supply a final, complete electronic set of your application materials as well as paper copies for distribution to the City's reviewing departments and outside agencies. The number of paper copies can vary depending upon the scope of your application. The paper format of your submission may vary. If your application includes any full-sized plan sheets, we may request submission on 11" x 17" or 24" x 36" size paper.
- 5. Development Review Committee Referral and Review.** Prior to rendering a decision on your project, your application may be referred to the Development Review Committee which consists of various City departments, City boards and commissions, and outside agencies such as the Colorado Department of Transportation, and gas and telephone companies. Community Development Department staff relies on these agencies to review your application and comment on any issues or concerns that they may have relating to your project. In some instances, review committee comments may cause you to redesign your project.
- 6. City Department/Applicant Development Review Committee Meeting.** If your application is referred to the Development Review Committee, you will meet with the committee to review and discuss their comments about your project. In some cases, the committee may request revisions or additional information. You will need to submit your revised materials or additional materials prior to receiving a decision on your project. Staff will distribute your additional information to the committee and will generally allow 2 weeks for their further review and comment.
- 7. Staff Review & Report.** Community Development Department staff will prepare a summary report for the Community Development Director that analyzes how your project meets the Municipal Code, the City's goals, policies, plans, standards and any other pertinent information. The report will include a staff recommendation of approval or denial. If staff recommends approval, usually there also will be a list of recommended conditions. You will receive a copy of this report, usually via email. Make sure that you read the report and review the listed conditions, if there are any.
- 8. Post-approval.** After you have satisfied all applicable conditions of your project's approval, Community Development Department staff will ask that you provide two copies of your final plat on 24 x 36-inch Mylar paper for recording with the Garfield County Clerk & Recorder.

## Administrative Adjustment

### **OVERVIEW**

An Administrative Adjustment allows the Community Development Director, Planning and Zoning Commission and/or City Council to review and approve minor modifications or deviations from the dimensional or numeric standards of Title 070-the Development Code. The process is intended to provide greater flexibility when necessary, without requiring a formal zoning amendment or variance. Administrative adjustment can be considered for the following Code standards:

| Allowable Administrative Adjustments                                                                                 |                                                             |
|----------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| Code Standard                                                                                                        | Allowable Administrative Adjustment<br>(maximum percentage) |
| <b>Site Standards</b>                                                                                                |                                                             |
| Lot area, minimum                                                                                                    | 15                                                          |
| Lot coverage, maximum                                                                                                | 15                                                          |
| Block length, maximum                                                                                                | 15                                                          |
| <b>Lot Dimensional Standards</b>                                                                                     |                                                             |
| Front setback, minimum                                                                                               | 15                                                          |
| Side setback, minimum                                                                                                | 15                                                          |
| Rear setback, minimum                                                                                                | 15                                                          |
| Encroachment into setback pursuant to Table 020.20, Authorized Exceptions to Setback Standards, maximum              | 15                                                          |
| <b>Building Standards</b>                                                                                            |                                                             |
| Building height, maximum<br>(excludes wireless communication facilities)                                             | 15                                                          |
| Accessory building height, maximum<br>(excludes wireless communication facilities)                                   | 15                                                          |
| Separation between buildings, minimum                                                                                | 15                                                          |
| Projection into height requirement pursuant Table 020.21, Authorized Exceptions to Maximum Height Standards, maximum | 15                                                          |
| <b>Development Standards</b>                                                                                         |                                                             |
| Number of required parking spaces, maximum or minimum                                                                | 15                                                          |
| Lighting height, maximum                                                                                             | 15                                                          |
| Sign height, maximum                                                                                                 | 15                                                          |
| Fence or wall height, maximum                                                                                        | 15 (one foot maximum)                                       |
| Minimum landscaping requirements                                                                                     | 15                                                          |

The Administrative Adjustment process cannot be applied to proposed modifications or deviations that result in the following:

1. An increase in the overall project density;
2. A change in permitted uses or mix of uses;
3. A deviation from the Use-specific Standards in 070.030.030 of the Municipal Code;
4. A deviation from Sensitive Area Protection Standards in 070.040.020 of the Municipal Code;
5. A deviation from building or fire codes;

6. A deviation from the City's Engineering Standards;
7. Requirements for public roadways, utilities, or other public infrastructure or facilities; or
8. A change to a development standard where that same standard was already modified through a separate administrative adjustment or variance.

#### **REVIEW CRITERIA**

The Community Development Director, Planning and Zoning Commission, and/or City Council will evaluate your application based on whether and to what extent your adjustment:

1. Will not result in incompatible development;
2. Will not result in adverse impacts unless adequately mitigated; and
3. Is of a technical nature and is required to-
  - a. Compensate for an unusual site condition;
  - b. Eliminate a minor inadvertent failure to comply with a Code standard; or
  - c. Protect a sensitive resource, natural feature, or community asset.

#### **INSTRUCTIONS**

1. Complete the questionnaire on pages 13-14 after you have had your pre-application conference. Use one questionnaire for each adjustment you are requesting. Once completed, submit the Administrative Adjustment questionnaire(s) along with the other items on your checklist. Use separate sheets if necessary.
2. It is important to remember that the decision to approve or deny an adjustment is a discretionary action based on how well you address the review criteria. This is your opportunity to describe in detail the reason why you need to deviate from the Municipal Code.

## **Special Use Permit Application Guide & Checklist**

Economic & Community Development Department  
101 W. 8<sup>th</sup> Street  
Glenwood Springs, CO 81601  
(970) 384-6411

### **PURPOSE**

Special use permit review procedures allow the City to evaluate proposed development and land uses that have unique or widely varying operating characteristics or unusual features. The review process is intended to ensure compatibility with surrounding areas and that adequate mitigation is provided for anticipated impacts.

### **REVIEW PROCESS**

All Special Use Permits require an application and public hearing before the Planning and Zoning Commission. In reviewing a proposed special use permit application, the Planning Commission considers whether:

- a. The use will be compatible with the surrounding area;
- b. The impacts of the use on surrounding areas have been adequately minimized;
- c. The use will be consistent with the general purpose and intent of this Code;
- d. The use will comply with all applicable standards of this Code;
- e. The use is in conformance with the Comprehensive Plan and other City plans and policies; and
- f. The use minimizes adverse impacts to the health, safety, and welfare of the inhabitants of the surrounding areas and the city.

Additional criteria for specific uses are listed in Section 070.030.030. Note: for uses involving marijuana establishments refer to the Marijuana Special Review Use Application Guide and Checklist.

- 1. Pre-application Conference.** Contact one of the planners in the Community Development Department prior to submitting your Special Use Permit application. We will discuss the review procedures, application requirements, application deadlines, and the City's goals, policies, and development standards as they relate to your proposed project.

At least 10 days prior to your scheduled conference, please submit one electronic copy of the following items:

- a. A completed Planning Application. The application is available [here](#), or on the City's website at [www.cogs.us](http://www.cogs.us). It is in "Forms, Permits & Applications" on the Community Development Department page.

- b. A written description of the proposed project.
- c. Conceptual drawings showing the location, layout, and primary elements of the proposal.
- d. Proposed uses, location of uses, and densities.

If your project involves more than one development action for the same property, your applications can be reviewed concurrently. For example, if your proposed project involves a Site/Architectural Plan Review, variances, and special use permit, you could have them processed and decided concurrently. Community Development Department planners will discuss the concurrent review process and application requirements with you during your pre-application conference.

- 2. Prepare Your Application.** During the pre-application conference you will receive a checklist of information that we will need to process your request. This information constitutes your application and may include any, or all the information found on page 7 of this guide.

Please be aware that city staff and the Planning and Zoning Commission will evaluate your application based on how well it demonstrates compliance with the Municipal Code, Special Review performance standards, and the City's goals, policies, and plans, as well as the Engineering Standards if your project involves grading/excavation or building construction.

You may review the Municipal Code on the City's website at [www.cogs.us](http://www.cogs.us). The Engineering Standards are located [here](#), or on the Engineering home page. Other approved plans also can be found on the City's website under the individual department pages. Community Development staff will help guide you to plans and policies that may be applicable to your project.

- 3. Submit Your Application.** Submit an electronic copy of your completed application to the Community Development Department at least 8 weeks prior to the date that you want your item heard before the Planning and Zoning Commission. Within 5 business days of your submission, Community Development Department staff will review your application to determine whether it is complete. If it is incomplete, we will contact you with a list of the information needed to complete your application. You are encouraged to submit your application well in advance of the deadline to allow you time to supply any missing information. Submissions of missing information after the deadline will result in your application being delayed to a future Planning and Zoning Commission agenda.
- 4. Provide Additional Copies.** After Community Development Department staff deems it complete, you will be asked to supply a final, complete electronic set of your application materials as well as paper copies for distribution to the City's reviewing departments and outside agencies. The number of paper copies can vary depending upon the scope of your

application. The paper format of your submission may vary. If your application includes any full-sized plan sheets, we may request submission on 11" x 17" or 24" x 36" size paper.

- 5. Complete Public Notices.** Your application requires that you formally notify the public of the time, date and purpose of your hearing before the Planning and Zoning Commission. You are required to post your property with a placard, submit a legal notice for publication in the local newspaper, and mail your notice to property owners within 300 feet of the outside boundary of your development parcel. Staff will review these requirements and will provide you with a packet of information that includes the deadlines for completing each form of public notice. This is a time-sensitive process. Deficient public noticing may delay your hearing.
- 6. Agency Referral and Review.** During the 8-week period between your application submittal and your hearing, staff will distribute copies of your application to our "reviewing agencies" which consists of various City departments, City boards and commissions, and outside agencies such as the Colorado Department of Transportation, and gas and telephone companies. Community Development Department staff relies on these agencies to review your application and comment on any issues or concerns that they may have relating to your project. You will receive copies of agency comments and will have an opportunity to respond, if need be. In some instances, agency comments may cause you to redesign your project. Staff will include these comments in the packet of information that is distributed to the Planning and Zoning Commission.
- 7. City Department/Applicant Development Review Committee Meeting.** Generally, three weeks prior to your public hearing you will meet with City Departments, and planning staff to review and discuss their preliminary comments about your project. Following this meeting, you may be required to revise your plans to respond to specific requests or suggestions made by staff. If significant, substantive changes are necessary you will be required to submit a new application in which case your hearing will be postponed
- 8. Staff Review & Report.** Toward the end of the 8-week review of your application materials, Community Development Department staff will prepare a report for the Planning and Zoning Commission meeting that analyzes how your project meets the Municipal Code, the City's goals, policies, and plans, and any other pertinent information. The report will include a staff recommendation of approval, denial, or continuance of your application. If staff recommends approval, usually there also will be a list of recommended conditions. Staff will complete the report no later than the Friday afternoon prior to the hearing. You will receive a copy, usually via email. Make sure that you read the report and review the listed conditions, if there are any. Staff will also distribute the report, a complete copy of your application, and agency comments to the Planning and Zoning Commission for its review.
- 9. Requesting a Continuance.** If, after reading the staff report, you wish to continue your application to the next month's Planning and Zoning Commission meeting to correct

deficiencies or clear up issues in the application, you will need to submit a letter to Community Development Department staff requesting continuance of your hearing. If you do this, you will not need to appear at the meeting or redo your public noticing, and no comments will be made by the City or public regarding your application at the hearing.

**10. Planning and Zoning Commission Hearing.** Staff will provide you with a copy of the meeting agenda no later than the Friday before your hearing. Applications are scheduled on the agenda based on the order in which they are received. You or your representative are required to attend your public hearing.

**11. Post-approval-Special Use Permit Issuance.** After you have satisfied any applicable conditions of your project's approval, Community Development Department staff will work with the City's Legal Department to prepare your Special Use Permit. You will receive the draft permit for your review and signature after which your staff planner will collect the required city signatures. Once the document is fully executed, you will receive a copy for your records.

**12. Post-approval Plan Modifications.** Please make sure that your plans reflect how you intend to use or develop your property. After your application has been approved, if you want to make significant changes you may be required to formally amend your application which involves additional hearings before the Planning & Zoning Commission.

#### **PUBLIC MEETING PROCEDURES**

The public hearing format is as follows:

1. Staff Presentation. Staff will provide the Commission with a summary of your project and an analysis of how it meets or differs from the Municipal Code and other city plans and standards.
2. Questions of staff by the Planning and Zoning Commission.
3. Applicant Presentation. This is your opportunity to present any additional information about your project to the Commission. You can mention points where you disagree with staff, present anything important that you felt that planning staff left out, present any new information that you have, or present any other information directly pertinent to the application. Out of respect for the Commission and other applicants, please keep presentations very brief. If you have no additional important information to add to staff's presentation, you may state this.
4. Questions of the applicant by the Commission.
5. Public Comment. The Commission Chair will open the meeting to public comment.
6. Applicant response to public comment. After hearing from all members of the public, the Chair will close the public portion of the meeting and allow you the opportunity to refute or address any statements provided. At this time, the Commission may also ask staff for clarification of any points of fact.

7. Motion for action on the application, discussion among the Commissioners, and a decision.

**Display of documents at the meeting.** You may use the Council Chambers computer to display any documents or to provide the Commission and Council with a prepared presentation. We recommend that you bring your materials on a flash drive.

## Administrative Adjustment

### **OVERVIEW**

An Administrative Adjustment allows the Community Development Director, Planning and Zoning Commission and/or City Council to review and approve minor modifications or deviations from the dimensional or numeric standards of Title 070-the Development Code. The process is intended to provide greater flexibility when necessary, without requiring a formal zoning amendment or variance. Administrative adjustment can be considered for the following Code standards:

| <b>Allowable Administrative Adjustments</b>                                                                             |                                                                     |
|-------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| <b>Code Standard</b>                                                                                                    | <b>Allowable Administrative Adjustment<br/>(maximum percentage)</b> |
| <b>Site Standards</b>                                                                                                   |                                                                     |
| Lot area, minimum                                                                                                       | 15                                                                  |

| <b>Development Standards</b>                                                                                            |                                                                     |
| Number of required parking spaces, maximum or minimum                                                                   | 15                                                                  |
| Lighting height, maximum                                                                                                | 15                                                                  |
| Sign height, maximum                                                                                                    | 15                                                                  |
| Fence or wall height, maximum                                                                                           | 15 (one foot maximum)                                               |
| Minimum landscaping requirements                                                                                        | 15                                                                  |

The Administrative Adjustment process cannot be applied to proposed modifications or deviations that result in the following:

1. An increase in the overall project density;
2. A change in permitted uses or mix of uses;
3. A deviation from the Use-specific Standards in 070.030.030 of the Municipal Code;
4. A deviation from Sensitive Area Protection Standards in 070.040.020 of the Municipal Code;
5. A deviation from building or fire codes;

6. A deviation from the City's Engineering Standards;
7. Requirements for public roadways, utilities, or other public infrastructure or facilities; or
8. A change to a development standard where that same standard was already modified through a separate administrative adjustment or variance.

#### **REVIEW CRITERIA**

The Community Development Director, Planning and Zoning Commission, and/or City Council will evaluate your application based on whether and to what extent your adjustment:

1. Will not result in incompatible development;
2. Will not result in adverse impacts unless adequately mitigated; and
3. Is of a technical nature and is required to-
  - a. Compensate for an unusual site condition;
  - b. Eliminate a minor inadvertent failure to comply with a Code standard; or
  - c. Protect a sensitive resource, natural feature, or community asset.

#### **INSTRUCTIONS**

1. Complete the questionnaire on pages 13-14 after you have had your pre-application conference. Use one questionnaire for each adjustment you are requesting. Once completed, submit the Administrative Adjustment questionnaire(s) along with the other items on your checklist. Use separate sheets if necessary.
2. It is important to remember that the decision to approve or deny an adjustment is a discretionary action based on how well you address the review criteria. This is your opportunity to describe in detail the reason why you need to deviate from the Municipal Code.

## Administrative Adjustment Criteria

### Adjustment type

Explain what it is that you are proposing that does not meet the Municipal Code requirement.

## Variance Criteria

If your application includes a request to deviate from a Municipal Code requirement you must address how your variance request meets all the criteria listed below.

### Instructions

1. Use this questionnaire if your project includes variances, which are deviations from Municipal Code requirements. Examples include deviations from setback requirements, building height maximums, design standards, minimum number of off-street parking spaces, and permitted light levels.
2. Complete this questionnaire after you have had your pre-application conference. Once completed, submit this questionnaire along with the other items on the checklist. Complete one questionnaire for each variance you are requesting. Use a separate sheet if necessary.
3. It is important to remember that the decision to approve or deny a variance is a discretionary action based on how well you meet all the variance criteria. This is your opportunity to describe in detail the reason why you need to deviate from the Municipal Code. If you are unable to provide justification of how your application meets each of the criteria below, you may want to consider whether a variance is truly warranted.

### Variance type

**Explain what Municipal Code requirement you are requesting a variance from and what it is that you are proposing that does not meet this requirement.**

---

---

---

---

---

### Variance Criteria

1. **Explain how your property has an exceptional shape, topography, building configuration or other exceptional site condition that is not a general condition throughout the zone district.** \_\_\_\_\_

---

---

---

---

---

2. Explain how the strict application of the Code standards for the variance you are seeking produces undue hardship. \_\_\_\_\_

### Complete Plan Set: Cover Sheet

The cover sheet must include the information listed below to be considered complete. During the Pre-application Meeting, City Staff may request additional items.

| General Plan Items (to be included on all sheets) |     |                                                                                                                                             |            |     |
|---------------------------------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------|------------|-----|
| Applicant                                         |     |                                                                                                                                             | City Staff |     |
| Yes                                               | N/A |                                                                                                                                             | Yes        | N/A |
|                                                   |     | <b><u>Formatting Requirements:</u></b>                                                                                                      |            |     |
|                                                   |     | All drawings shall be submitted in both hard copy and electronic (PDF) formats.                                                             |            |     |
|                                                   |     | Sheet sizes shall be a minimum of 11" x 17" and a maximum of 24" x 36" with a ½" border in landscape orientation.                           |            |     |
|                                                   |     | Symbols and line types shall comply with industry drafting standards and shall graphically distinguish between existing and proposed items. |            |     |
|                                                   |     | Text shall be no less than 0.1 inch in height.                                                                                              |            |     |
|                                                   |     | Property boundary lines of the subject property shall be depicted with a bold "phantom" linetype.                                           |            |     |
|                                                   |     | Utilize match lines to connect information from drawings.                                                                                   |            |     |
|                                                   |     | <b><u>General Information to be included on all civil sheets:</u></b>                                                                       |            |     |
|                                                   |     | Name of subdivision or address; section, township, range; city, county and state.                                                           |            |     |
|                                                   |     | Page number (i.e. 1 of x, 2 of x, etc.)                                                                                                     |            |     |
|                                                   |     | Title block.                                                                                                                                |            |     |
|                                                   |     | North arrow and indication of standardized scale, both fractional and bar (i.e. 1" = 20' or 1" = 40')                                       |            |     |
|                                                   |     | Date of preparation.                                                                                                                        |            |     |
|                                                   |     | Contact information for professional preparing plans including email address.                                                               |            |     |
|                                                   |     | Name, address, email, and telephone number of owner and applicant.                                                                          |            |     |

| Cover Sheet |     |                                                                                                                                                                                                                                                        |            |     |

|                  |            | Depict existing and proposed improvements including, without limitation, all of the following: grading; circulation systems (sidewalks, trails, roadways); parking areas & driveway locations; floodways and floodplains; street lights; curbs & gutters; traffic signal poles and controllers; fire hydrant locations; pavement edges; open space; and landscaping.                                                                                                                                                                                                                                |                   |            |
|                  |            | Depict existing and proposed utilities (gas, electric, cable, fiber optics, raw water, water, sewer) and include sizing. Note: Depending on the amount of detail on the site plan, the utilities may be shown on a separate plan sheet.                                                                                                                                                                                                                                                                                                                                                             |                   |            |
|                  |            | Depict existing and proposed buildings and structures. Label uses and square footages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                   |            |
|                  |            | Depict existing and proposed circulation systems (sidewalks, trails, roadways, driveways, curb cuts, parking areas). Include widths and surface material information. Provide parking count, space dimensions, and identify all ADA parking spaces. Include curb return radii; ADA ramp locations; horizontal curve data; full width of right of way; intersecting roadways; street cross sections; and other relevant features along all roadways abutting the proposed development. Show bicycle parking location and quantity. Indicate all loading and vehicular stacking areas, as applicable. |                   |            |
|                  |            | Depict existing and proposed drainage facilities including inlets, manholes, and stormwater outfalls. Include directional drainage flow arrows.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                   |            |
|                  |            | Label all existing and proposed easements. Provide width and purpose of easement (utility, access, etc.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |            |
|                  |            | Indicate required setbacks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                   |            |
|                  |            | Indicate high water setback for developments bordering the Roaring Fork or Colorado rivers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                   |            |
|                  |            | Depict sight triangles for all access points.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |            |
|                  |            | Depict type, material, height for all fences and retaining walls. Label top and bottom of all retaining walls.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                   |            |
|                  |            | Depict trash enclosure locations. Provide enclosure material and height details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |            |
|                  |            | Label accessible route from the public right of way or primary access to the proposed building public entrance. Label distance from closest property line to the building.                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |            |
|                  |            | Label snow storage areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |            |

|                                       |              | Provide conceptual site plan depicting location of building, parking areas, access/driveways, building entrances, easements, setbacks and all site improvements including but not exclusive of trash/dumpsters, bicycle parking facilities, landscaped areas, and retaining walls/fences. Site plan shall include contours with elevations noted. Show and label limits of site disturbance.                                                                                                                                                                                                                                                                                                                                                                 |                |     |  |  |              |                    |               |            |    |           |            |     |                            |            |     |              |          |     |  |  |
|                                       |              | Provide conceptual building elevations for all sides of the building(s), accessory structures such as but not exclusive of garages and trash enclosures. Note type of construction; label and note location and type of exterior finishes; depict and label windows and exterior doors; identify exterior lighting; depict and label rooftop mechanical units. Note building height as measured from existing grade to the midpoint of the roof. Grade shall be based on USGS elevations.                                                                                                                                                                                                                                                                    |                |     |  |  |              |                    |               |            |    |           |            |     |                            |            |     |              |          |     |  |  |
|                                       |              | <p>For each elevation, provide a chart which describes the type of materials and percentage of total surface area in square feet. Example shown below:</p> <table border="1" style="margin-left: 40px;"> <thead> <tr> <th colspan="3">West Elevation</th> </tr> <tr> <th></th> <th>Surface Area</th> <th>Percentage of Net*</th> </tr> </thead> <tbody> <tr> <td>Gross of wall</td> <td>2,850 s.f.</td> <td>NA</td> </tr> <tr> <td>Net* EIFS</td> <td>1,500 s.f.</td> <td>53%</td> </tr> <tr> <td>Net* Concrete Masonry Unit</td> <td>1,065 s.f.</td> <td>37%</td> </tr> <tr> <td>Net* glazing</td> <td>285 s.f.</td> <td>10%</td> </tr> </tbody> </table> <p>*Net excludes roof forms, awnings and similar features. Includes glazed windows and doors.</p> | West Elevation |     |  |  | Surface Area | Percentage of Net* | Gross of wall | 2,850 s.f. | NA | Net* EIFS | 1,500 s.f. | 53% | Net* Concrete Masonry Unit | 1,065 s.f. | 37% | Net* glazing | 285 s.f. | 10% |  |  |

| Yes                                 | N/A |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Yes        | N/A |
|                                     |     | Depict existing and proposed topography, existing physical features including geological formations, watercourses and water bodies; existing streets, trails, sidewalks, parking areas, and other circulation areas; existing and proposed utility easements; electric transformers and mechanical units; existing and proposed buildings and structures; existing and proposed trash collection areas; existing and proposed light poles; and existing and proposed retaining walls and fencing noting top and bottom of wall/fence elevations. |            |     |
|                                     |     | Show and label all parking areas and parking spaces. Depict parking landscape areas. Note dimensions of landscape areas such as width of parking lot landscape islands, planting strips, landscaped setback areas.                                                                                                                                                                                                                                                                                                                               |            |     |
|                                     |     | Show and label limits of disturbance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |            |     |
|                                     |     | Identify all existing trees and shrubs intended for preservation. Provide caliper sizes for all existing trees to remain.                                                                                                                                                                                                                                                                                                                                                                                                                        |            |     |
|                                     |     | Provide locations for all proposed landscaping. Utilize different graphic symbols to represent the different general types of plantings: trees, shrubs, grasses, perennials.                                                                                                                                                                                                                                                                                                                                                                     |            |     |
|                                     |     | Depict and label sight triangles at all street and driveway/street intersections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |            |     |
|                                     |     | Include a chart identifying the total amount of landscape and hardscape areas expressed in square feet and as a percentage of the total lot area. For parking areas, note square footage of landscaped area and as a percentage of the parking area; include total number of required and provided trees, shrubs, and perennials.                                                                                                                                                                                                                |            |     |

## Construction Management Plan Checklist

Prior to the approval of a building/ROW/Grading permit, any commercial, multi-family, or applicable single family/duplex project must complete an approved Construction Management Plan (CMP). Below are the required items to be included in the CMP. Please check "yes" if the item is included, "no" if it is not, and "N/A" if not-applicable. Please provide an explanation for any "No" answers at the bottom of the checklist.

**Project Name:** P0024 Locker Room Renovation

**Date:** 1/21/2025

**Estimated Construction Start Date:** 4/1/2025

**End Date:** 5/15/2025

**Individual responsible for CMP monitoring and compliance Name:**

Ben Hofstra

**Phone # (local):** (720) 272-7299

| <p>Provide narrative describing efforts to reduce fugitive dust from construction activities:<br/> Dust from demolition and construction activities to be isolated to the impacted area with dust control measures placed at openings and entryways. Low pressure zone created within impacted areas to prevent dust from escaping to public areas. Dust accumulation in impacted areas will be dealt with on an ongoing basis.</p> |                          |                          |                          |
| <p>Provide explanation for any "No" or "N/A" answers:</p> <p>1c. Public ROW unaffected<br/> 2b-g. No erosion or sediment anticipated by SOW<br/> 3f. No field trailer needed. GC Office is across the street from construction zone<br/> 5a-e. No external traffic control plan needed</p>                                                                                                                                          |                          |                          |                          |

**\*\* Plans shall be phased and updated as the project evolves and site conditions change.**

**\*\* Please notify adjacent property owners prior to mobilization.**

## Standard Notes for Construction Management Plans:

1. This plan shall be kept on site at all times and updated to reflect any changes.
2. Clearing or grading shall not begin until all control measures have been installed.
3. Contractor is responsible for installing and maintaining temporary erosion and sediment control measures during construction and establishing any required permanent control measures to prevent release of pollutants from the project site.
4. Control measures shall be used, modified, and maintained whenever necessary to reflect current conditions. Control measures shall be inspected weekly and after every precipitation event. Accumulated sediment shall be removed from control measures when the sediment level reaches  $\frac{1}{2}$  the height of the control measure.
5. The contractor shall promptly remove all sediment, mud, and construction debris that may accumulate in the right of way, private property, or water ways as a result of the construction activities.
6. All ingress and egress access points on to the disturbed site must be stabilized with a vehicle tracking control pad. Access shall only be via approved locations as shown on approved CSP.
7. Temporary soil stabilization measures shall be implemented where ground disturbances have temporarily or permanently ceased for 14 days or for areas of land disturbance within one growing season.
8. Concrete waste and washout water from mixing trucks shall be contained on site, removed from the site, and properly disposed. Materials shall not be allowed to enter state waters.
9. Contractor is responsible for complying with all local, state, and federal laws. In addition contractor must obtain required permits.
10. Emergency access must be kept obstacle free and passable at all times.
11. For any work to be done in the Right of Way, coordinate with the City ROW Manager regarding special permitting. No work shall be conducted in the ROW between November 1 and May 1 without prior approval from the director of Public Works.
12. Where required as part of the ROW permit or where site work affects the pedestrian or vehicle travel way, traffic control shall be installed. All traffic control shall be in accordance with the Manual on Uniform Traffic Control Devices, latest edition.
13. Sidewalks adjacent to construction sites shall be maintained, for public use, by the contractor. In areas where construction is taking place next to the sidewalk and overhead hazards are possible, site is responsible for installing and maintaining sidewalk protection.

CITY COUNCIL MEETING  
JANUARY 16, 2025  
6:15 PM

Note: Official meeting minutes are located on the City website via YouTube video at the following link: <https://www.youtube.com/user/GlenwoodSprings1885/videos>. The times in agenda items indicate approximately where the item can be found on the YouTube video timeline.

## REGULAR SESSION

### Item 5. 5:24 Roll Call

**Present:** Councilor Simms, Councilor Schachter, Councilor Weimer, Mayor Wussow, Councilor Zalinski, Councilor Godes, and Mayor Pro Tem Dehm.

**Staff Present:** Also present were City Manager Steve Boyd; City Clerk Ryan Muse; City Attorney Karl Hanlon; Finance Director Yvette Gustad; Director of Economic and Community Development Hannah Klausman; and City Engineer Ryan Gordon.

### Item 6. 5:41 Agenda Changes & Conflicts

*Mayor Pro Tem Dehm wished to pull the January 27, 2025 minutes off of the consent agenda to be voted on separately as he was not here and cannot vote yay or nay.*

*Councilor Godes would like to pull Item E, City Manager Employment Contract, off of the consent agenda and discuss it separately.*

### Item 7. 6:41 Council Announcements

Councilor Zalinski made comments welcoming new board and commission members and Councilor Simms requested that Council discuss the Spring Cleanup program.

### Item 8. 8:29 Citizens Appearing Before Council (for items not on the agenda - comments limited to 3 minutes)

Rachel Wynn, resident, came to discuss the issue of wildfires. Mayor Wussow replied to her concerns.

Mike Harmon, resident, made comments regarding street improvement taxes and legislative actions.

Laurie Chase, resident, also made comments regarding fire risks and the issue of private property owner's responsibilities.

### Item 9. 17:57 Council Response to Citizen Comments

Councilors Godes, Schachter, Zalinski and Mayor Wussow responded to comments made by the public.

### Item 10. 25:04 Consent Agenda

*Mayor Wussow moved to approve the consent agenda minus items A and E. Councilor Weimer seconded and the motion passed unanimously.*

## Item 11. 25:33 January 2, 2025, Council Minutes

***Councilor Godes moved to approve the City Council minutes from the January 2, 2025 meeting.***

***Councilor Zalinski seconded the motion and it passed 6-0. Mayor Pro Tem Dehm did not vote.***

## Item 12. 25:58 City Manager Employment Contract

Councilors Schachter and Godes discussed why this item was pulled from the consent agenda.

***Councilor Godes moved to amend the current contract by \$2000 a month to observe the housing allowance that the previous City Manager received. Mayor Pro Tem Dehm seconded the motion.***

***The motion passed unanimously with Councilor Schachter abstaining.***

## Item 13. 33:10 Glenwood Springs Historical Society Budget

Jamie LaRue, Board President, and Tyler Benson, Board Vice President, provided a financial update to the City Council

***Councilor Godes moved approve \$60,000 in support plus up to an additional \$20,000 match for anything over the \$27,000 raised in contributions in 2024.***

***Councilor Schachter seconded the motion.***

***Councilor Godes withdrew the motion after discussion.***

***Mayor Pro Tem Dehm moved to approve \$80,000 in funding from here on out as a baseline, and up to \$40,000 matching funds match coming from tourism. Councilor Zalinski seconded the motion, and it passed unanimously.***

## Items 14. 1:06:25 Community Center Event regarding Local Government Participation

City Manager Steve Boyd presented the topic. Mayor Wussow and Council members discussed the idea behind an event which would be similar to a job fair to gain interest in the city commissions and boards.

## Item 15. 1:16:21 Ordinance 2025-02; Changing the Name of the Street Tax Fund

Karl Hanlon presented the item.

Mayor Wussow opened the floor up to public comment.

There was none.

Mayor Wussow closed the floor up to public comment.

***Mayor Pro Tem Dehn moved to approve Ordinance 2025-02; Changing the Name of the Street Tax Fund as presented. Councilor Zalinski seconded the motion and it passed unanimously.***

## Item 16 1:18:12 Ordinance 2025-03 Budget Amendment #1 for 2025. (ONE READING)

City Manager Steve Boyd presented the topic.

Mayor Wussow opened the floor up to public comment.

There was none.

Mayor Wussow closed the floor up to public comment.

***Councilor Zalinski moved to approve Ordinance 2025-03 Budget Amendment #1 for 2025 as presented. Mayor Pro Tem Dehm seconded the motion, and it passed unanimously.***

## Item 17. 1:44:33 Planning File 34-24 Preliminary Plat and Planning File 36-24 Residential Minor Site and Architectural Plan

Emery Ellingson, Senior Planner, presented. City Engineer Ryan Gordon and Public Works Director Matt Langhorst answered some questions posed by the Council.

The applicants, Roger Giard and Ben West presented and answered questions posed by Council. Public Community Development Director Hannah Klausman also addressed the Council and answered questions regarding the project.

Mayor Wussow opened the floor up to public comment.

Laurie Chase, resident of the area this proposed project is in, made public comment.

Mayor Wussow closed the floor up to public comment.

***Councilor Schachter moved to approve Planning File 34-24 Preliminary Plat as presented. Mayor Pro Tem Dehm seconded the motion, and it passed unanimously.***

***Mayor Pro Tem Dehm moved to approve Planning file 36-24 Residential Minor Site and Architectural Plan as presented. Councilor Zalinski seconded the motion, and it passed unanimously.***

## Item 18. 2:38:17 Sale Tax Rebate Request from the Meadows

City Attorney Karl Hanlon presented a proposed sales tax incentive agreement between the City and WMG Meadows, LLC (Miller Realty) regarding the vacant Bed Bath & Beyond space at Glenwood Meadows.

Mayor Wussow opened the floor up to public comment.

There was none.

Mayor Wussow closed the floor up to public comment.

***Mayor Pro Tem Dehm moved to discuss the topic at a work session on February 6, 2025 and Council requests a representative and the applicant appear before Council at the meeting that day. Councilor Schachter seconded the motion, and it passed unanimously.***

## Item 19. 3:05:10 Council Comments

Councilor Schachter made comments about parking and city code.

Councilor Simms said he would like to have a work session or meeting to deepen the Council's toolbox for understanding these issues.

Chief Hassell addressed questions from Councilor Weimer regarding ongoing projects regarding parking violation technologies and traffic cameras that have recently been implemented.

Councilor Godes made comments regarding the flow and consistency of the Council meeting proceedings. Mayor Wussow responded.

Mayor Wussow complimented the Community Development Director and her department for their work and presentations. She also commented on the South Bridge update that took place at the work session earlier today and complimented the Engineering and Public Works department for their work on these updates.

## **Item 20. 3:11:48 Report from City Administration**

City Manager Steve Boyd announced their will be a Community Listens event that takes place April 6-8 in Council Chambers. The Financial Advisory Board will be meeting soon and if Council has anything they'd like to address, please let administration know. He also gave an update on IT staffing.

City Attorney Karl Hanlon addressed items that will soon be litigated regarding a local mine issue. He gave an update on the West Glenwood Sanitation District.

Mayor Wussow read the correspondence in the file.

***Councilor Godes moved to provide a letter of support for the CDOT RAISE Grant application. Mayor Pro Tem Dehm seconded the motion, and it passed unanimously.***

---

### Personal and Professional Interests

#### Why are you interested in serving on the Planning and Zoning Commission?\*

I am deeply invested in the responsible growth and development of Glenwood Springs. Since joining the Planning and Zoning Commission in 2021, I have developed a strong understanding of the community's needs and priorities. I am passionate about ensuring sustainable development that respects the character of our town while accommodating future needs. Continuing to serve on the commission allows me to contribute my expertise and collaborative approach to making thoughtful decisions that benefit residents and enhance the quality of life in our community.

#### What do you view as the role of a Planning and Zoning Commission member?\*

The role of a Planning and Zoning Commission member is to guide and oversee the development and use of land in a manner that aligns with the community's long-term vision, goals, and policies. This includes reviewing and making recommendations on zoning amendments, development proposals, and comprehensive plans while balancing growth, environmental sustainability, and the needs of residents and businesses. A commission member must ensure that decisions are informed by public input, adhere to regulations, and reflect a commitment to preserving the character and integrity of the community.

**What experience have you had in the land use approval process?\***

As a member of the Glenwood Springs Planning and Zoning Commission since 2020, I have gained extensive experience in the land use approval process. I have reviewed and evaluated numerous applications, including rezoning requests, variances, conditional use permits, and site development plans. This role has required me to analyze proposals for compliance with local zoning codes and alignment with the city's comprehensive plan, while also considering public input and environmental impact. My experience includes collaborating with city staff, developers, and community members to ensure balanced and thoughtful decisions that serve the best interests of Glenwood Springs

**Do you have any particular areas of interest or a particular perspective relating to land use development in Glenwood Springs?\***

I am particularly interested in promoting sustainable and balanced development that preserves the natural beauty and character of Glenwood Springs while accommodating future growth. I am passionate about fostering affordable housing opportunities to ensure that people who work in our community can also live here. Additionally, I am committed to supporting mixed-use developments that enhance walkability and connectivity while reducing environmental impact. My perspective is rooted in the belief that land use decisions should reflect the needs of current residents, while also planning thoughtfully for future generations

**Are you aware of and understand the quasi-judicial function of the Planning and Zoning Commission?\***

Yes, I am fully aware of and understand the quasi-judicial function of the Planning and Zoning Commission. As a quasi-judicial body, the commission must evaluate land use applications based on established laws, regulations, and evidence presented during public hearings. This role requires impartiality, a focus on facts, and a commitment to avoiding bias or influence from external factors. My experience on the commission since 2021 has reinforced the importance of this responsibility in ensuring that decisions are fair, transparent, and legally sound

**Can you describe an experience making a decision that made people unhappy?\***

While I can't recall a specific instance of making a decision that caused significant unhappiness, I understand that serving on the Planning and Zoning Commission often involves balancing competing interests. It's inevitable that not all decisions will please everyone, but I approach every situation with an open mind, thorough analysis, and a focus on what is best for the community as a whole. I am prepared to navigate challenging decisions with transparency and fairness, even when they may not align with all perspectives

**Can you separate yourself from your personal opinions and represent the City's goals, policies, plans and the Glenwood Springs Municipal Code in an equitable fashion?\***

Yes, I am fully capable of separating my personal opinions from my responsibilities as a Planning and Zoning Commission member. My primary focus is on representing the City's goals, policies, plans, and the Glenwood Springs Municipal Code in a fair and equitable manner. Serving on the commission since 2020 has reinforced the importance of adhering to established regulations and ensuring that all decisions are made objectively, based on facts and evidence. I am committed to maintaining impartiality and upholding the integrity of the process to serve the best interests of the entire community

**The Planning and Zoning Commission members generally attend one to two meetings a month and can have extensive packet materials to review in preparation for meetings. Do you have any existing time commitments that will hamper your ability to serve?\***

None

**What experience do you have working with people on a board, commission, or committee?\***

Serving in different committees in higher education for 15 years and Planning and Zoning for the last 4 years

**Have you previously served on the Planning and Zoning Commission?\***

Yes

## Reappointment Applicants

These questions only required for reappointment applicants.

### Why do you think you should be reappointed?

I am deeply invested in the responsible growth and development of Glenwood Springs. Since joining the Planning and Zoning Commission in 2021, I have developed a strong understanding of the community's needs and priorities. I am passionate about ensuring sustainable development that respects the character of our town while accommodating future needs. Continuing to serve on the commission allows me to contribute my expertise and collaborative approach to making thoughtful decisions that benefit residents and enhance the quality of life in our community.

### Have you served two full successive terms on the Planning and Zoning Commission?

No

---

## Powers and Duties of the Planning and Zoning Commission

*(as defined in Title 020 of the Glenwood Springs Municipal Code); f. Powers and Duties of the Planning and Zoning Commission*

The powers and duties of the Planning and Zoning Commission shall be:

1. To develop and recommend a master plan subject to the approval of the City Council and its environ in accordance with the provisions of this Code and the laws of the State.
2. To recommend to the City Council boundaries of zone districts and regulations to be enforced therein, in accordance with the provisions of this Code and the laws of the State.
3. To review proposals relating to subdivision, development and use of land and make decisions or recommendations on such proposals, in accordance with the procedures and provisions set forth in this Code.
4. To hear and decide appeals wherein there is a question of interpretation of the zone district map, the master plan or related documents and similar questions as they may arise in the administration of this Code.
5. The Planning and Zoning Commission shall have the duty and power to act on appeals with regard to matters arising from enforcement of provisions of Title 070 of this Code, including:
  - Review of administrative decisions. To hear and decide appeals where it is alleged there is error in any action, including any order, interpretation, requirement, decision or determination made by an administrative official of the city in the enforcement of Title 070 of this Code.
  - Variances. To hear and decide requests for variances from the zoning provisions and sign regulation provisions where there are unique, unnecessary and unreasonable hardships in the way of carrying out the strict letter of said provisions; and to hear and decide requests for variances to allow deviations from restrictions upon the construction and placement of buildings and other structures on site. Examples of such variances include, but are not limited to, modifications of minimum area requirements, building coverage and setback restrictions. Variances from permitted and special review uses in zone district text shall not be considered.
6. To perform such other functions as required by the provisions of Title 070.
7. To service as the Building Board of Appeals.

*(as defined in Title 020 of the Glenwood Springs Municipal Code); c. Powers and Duties of Building Board of Appeals.*

The powers and duties of the Building Board of Appeals shall be:

1. To hear appeals in accordance with the International Building Code, International Residential Code, International Fire Code, and the other adopted codes from the International Code Council, as adopted or amended by Title 060 of this Code. Such power shall not include matters of interpretation arising under the Code.
-

## **Appointment, Removal, Term, and Vacancies of Boards and Commissions**

*(Per the Glenwood Springs, CO Municipal Code 020.020.040)*

(a) Appointment and term of members. Except as otherwise provided, all appointments to the boards and commissions shall be by the City Council for terms of three (3) years each, and each member shall serve until his/her successor is appointed and takes office; provided, however, that the initial terms of office may be shortened by the City Council so as to provide overlapping terms of office. Appointments shall expire the day before the first regular meeting of the City Council in each month according to the following schedule:

1. February:

Planning and Zoning Commission;  
Finance Advisory Board;  
Tourism Management Board;  
Building Board of Appeals.

2. March:

Transportation Commission;  
Arts and Culture Board;  
Parks and Recreation Commission;  
Airport Board;  
River Commission.

3. April:

Local Liquor Licensing Authority;  
Victim's Witnesses Assistance and Law Enforcement Board;  
Historic Preservation Commission;  
Workforce Housing Fund Advisory Board;  
Glenwood Springs Housing Commission.

(b) Alternate members. The City Council at its discretion may appoint up to three (3) persons as alternate members for each board or commission. If a regular member of a board or commission is to be absent from a meeting, the presiding officer for the meeting may select an alternate member to fill such absence and to attend and serve at the meeting. The alternate member may exercise all powers at the meeting which the absent regular member could exercise, and the alternate's powers and privileges shall terminate at the end of the meeting attended. The presiding officer may at his/her discretion select the same alternate to serve at successive meetings in the absence of any member.

(c) Limit to term of members. Unless it is deemed vital by the City Council that an appointed member of a board or commission be retained in office, no Board member shall serve more than two (2) full successive terms on the same board or commission. An individual may serve multiple non-successive terms on the same board or commission.

(d) Removal of members. All appointed members of a board or commission shall be subject to removal, at any time, by the City Council. In the event an appointed member of a board or commission ceases to qualify for membership, his or her appointment is immediately terminated.

(e) Vacancies. The City Council shall fill all vacancies on boards and commissions by appointment for the unexpired term.

(Code 1971 §§ 2-63, 2-64, 2-67; 6-95 § 1; 10-07 § 2; Ord. No. 9-2018 , § 2, 4-20-2018)

**Personal and Professional Interests**

**Why are you interested in serving on the Planning and Zoning Commission?\***

I enjoy participating in the land-use process for our city. I feel it's very important for the citizens to be heard, and to understand the process and reasoning behind why or why not a project is approved. I feel like my experience helps make a difference. I've lived in the community for 25 years, and love Glenwood.

**What do you view as the role of a Planning and Zoning Commission member?\***

I have served as the commission chairman for the last year. I like the team environment/problem solving of the commission, and getting all commissioners to participate to hear different perspectives for a richer solution

**What experience have you had in the land use approval process?\***

I was a developer and contractor in Glenwood Springs for approximately 20 years. I built single family homes, small multi-family developments, and several office buildings.

**Do you have any particular areas of interest or a particular perspective relating to land use development in Glenwood Springs?\***

housing projects including affordable housing, code revision/development,

**Are you aware of and understand the quasi-judicial function of the Planning and Zoning Commission?\***

yes

**Can you describe an experience making a decision that made people unhappy?\***

a recent development that was approved by P&Z on Cowden. The project followed the code and only had one minor variance. Neighborhood members did not want to see a project that size being built in that location. Even though the project was approved, I feel the citizens were heard by the commission and understood why it was approved....though still not happy with the outcome.

**Can you separate yourself from your personal opinions and represent the City's goals, policies, plans and the Glenwood Springs Municipal Code in an equitable fashion?\***

yes

**The Planning and Zoning Commission members generally attend one to two meetings a month and can have extensive packet materials to review in preparation for meetings. Do you have any existing time commitments that will hamper your ability to serve?\***

no

**What experience do you have working with people on a board, commission, or committee?\***

have served on the planning commission for the past 3 years. have served on community boards: Junior achievement president, GWS soccer board president, Sunlight ski team treasurer, Presbyterian church board member

**Have you previously served on the Planning and Zoning Commission?\***

Yes

---

### Reappointment Applicants

These questions only required for reappointment applicants.

**Why do you think you should be reappointed?**

I feel like my developer/contractor experience helps to enrich the process. I also feel like I'm a good team member with the overall commission

**Have you served two full successive terms on the Planning and Zoning Commission?**

No

## **Powers and Duties of the Planning and Zoning Commission**

*(as defined in Title 020 of the Glenwood Springs Municipal Code); f. Powers and Duties of the Planning and Zoning Commission*

The powers and duties of the Planning and Zoning Commission shall be:

1. To develop and recommend a master plan subject to the approval of the City Council and its environ in accordance with the provisions of this Code and the laws of the State.
2. To recommend to the City Council boundaries of zone districts and regulations to be enforced therein, in accordance with the provisions of this Code and the laws of the State.
3. To review proposals relating to subdivision, development and use of land and make decisions or recommendations on such proposals, in accordance with the procedures and provisions set forth in this Code.
4. To hear and decide appeals wherein there is a question of interpretation of the zone district map, the master plan or related documents and similar questions as they may arise in the administration of this Code.
5. The Planning and Zoning Commission shall have the duty and power to act on appeals with regard to matters arising from enforcement of provisions of Title 070 of this Code, including:
  - Review of administrative decisions. To hear and decide appeals where it is alleged there is error in any action, including any order, interpretation, requirement, decision or determination made by an administrative official of the city in the enforcement of Title 070 of this Code.
  - Variances. To hear and decide requests for variances from the zoning provisions and sign regulation provisions where there are unique, unnecessary and unreasonable hardships in the way of carrying out the strict letter of said provisions; and to hear and decide requests for variances to allow deviations from restrictions upon the construction and placement of buildings and other structures on site. Examples of such variances include, but are not limited to, modifications of minimum area requirements, building coverage and setback restrictions. Variances from permitted and special review uses in zone district text shall not be considered.
6. To perform such other functions as required by the provisions of Title 070.
7. To service as the Building Board of Appeals.

*(as defined in Title 020 of the Glenwood Springs Municipal Code); c. Powers and Duties of Building Board of Appeals.*

The powers and duties of the Building Board of Appeals shall be:

1. To hear appeals in accordance with the International Building Code, International Residential Code, International Fire Code, and the other adopted codes from the International Code Council, as adopted or amended by Title 060 of this Code. Such power shall not include matters of interpretation arising under the Code.
-

## **Appointment, Removal, Term, and Vacancies of Boards and Commissions**

*(Per the Glenwood Springs, CO Municipal Code 020.020.040)*

(a) Appointment and term of members. Except as otherwise provided, all appointments to the boards and commissions shall be by the City Council for terms of three (3) years each, and each member shall serve until his/her successor is appointed and takes office; provided, however, that the initial terms of office may be shortened by the City Council so as to provide overlapping terms of office. Appointments shall expire the day before the first regular meeting of the City Council in each month according to the following schedule:

1. February:

Planning and Zoning Commission;  
Finance Advisory Board;  
Tourism Management Board;  
Building Board of Appeals.

2. March:

Transportation Commission;  
Arts and Culture Board;  
Parks and Recreation Commission;  
Airport Board;  
River Commission.

3. April:

Local Liquor Licensing Authority;  
Victim's Witnesses Assistance and Law Enforcement Board;  
Historic Preservation Commission;  
Workforce Housing Fund Advisory Board;  
Glenwood Springs Housing Commission.

(b) Alternate members. The City Council at its discretion may appoint up to three (3) persons as alternate members for each board or commission. If a regular member of a board or commission is to be absent from a meeting, the presiding officer for the meeting may select an alternate member to fill such absence and to attend and serve at the meeting. The alternate member may exercise all powers at the meeting which the absent regular member could exercise, and the alternate's powers and privileges shall terminate at the end of the meeting attended. The presiding officer may at his/her discretion select the same alternate to serve at successive meetings in the absence of any member.

(c) Limit to term of members. Unless it is deemed vital by the City Council that an appointed member of a board or commission be retained in office, no Board member shall serve more than two (2) full successive terms on the same board or commission. An individual may serve multiple non-successive terms on the same board or commission.

(d) Removal of members. All appointed members of a board or commission shall be subject to removal, at any time, by the City Council. In the event an appointed member of a board or commission ceases to qualify for membership, his or her appointment is immediately terminated.

(e) Vacancies. The City Council shall fill all vacancies on boards and commissions by appointment for the unexpired term.

| <b>Background Info:</b>      | The Glenwood Springs Fire Dept does not have any exhaust removal systems in its facilities. These systems remove harmful particulates from buildings and reduce health risks and exposures to its personnel. The department solicited bids and received two. This vendor was selected as it meets the specifications required and is used by area fire departments; demonstrating its effectiveness. |
| <b>Issues:</b>               | The department has identified this shortcoming in its efforts to provide a safe workplace. Acquiring the decades old technology will move to satisfy an industry standard in fire department facilities.                                                                                                                                                                                             |
| <b>Fiscal Impact:</b>        | Fees of \$47,864.29                                                                                                                                                                                                                                                                                                                                                                                  |

The City of Glenwood Springs

806 Cooper Ave,

Glenwood Springs, CO 81601

Thank you for the opportunity to bid on the Fire Station Source Capture Exhaust system. Weidner is excited to be considered for the exhaust removal system project. Weidner is proud to offer MagneGrip PRO source capture vehicle exhaust removal systems to The City of Glenwood Springs.

Weidner is based in Midvale, Utah and has been a MagneGrip dealer for the western United States for over 18 years. We have been selling, installing, and servicing exhaust removal systems all over the West. We have over 35 employees and are growing.

MagneGrip is headquartered in Cincinnati, Ohio and is the only exhaust removal system manufactured entirely in the USA. MagneGrip is a certified Woman Owned Small Business (WOSB) and is a Women's Business Enterprise (WBE).

Weidner is proud to include the MagneGrip Pro Sliding Track (SFTMPRO) for station N0.2 . These systems use the least amount of hose, allowing ease of movement in tight spaces. The lower section of solid blue hose is rated at 850° Fahrenheit, this helps extend the life of the entire system. When the apparatus is started, the exhaust pressure starts the system fan and draws the exhaust emissions in the track and ductwork. As the apparatus exits the fire station the trolley and or balancer moves along the track and the magnetic nozzle automatically disconnects at the doorway.

Weidner is willing to dedicate the time and resources necessary to complete the project in a timely manner. Our team consists of the Exhaust Systems Manager, inside sales/project support, shipping department, installation team and design team. As of today, delivery of equipment is eight weeks from the time of order. Completion of the project will take approximately 5 working days.

Curtis Drage will be the project manager and is available for planning and onsite support during the project. Mike Thomas is the installation team manager; he will be leading the installation and available during the planning phase.

Sincerely, Curtis Drage

## **2.i      Products**

STFMPRO-361

MagneGrip 36 ft. pro sliding flex hose system, includes (6) sections of track, support legs, feet kits, slinky hose, 5" blue/white hose, 5" hi temp pro solid blue lower hose, knob handle, balancer, lifting elbow, pressure sensor, standard transmitter, 6" blast gate, and pro tailpipe adapter.  
520042-05

CF363-3

MagneGrip Cincinnati fan/motor assembly, 3 HP, Three phase, 3300 CFM at 6" sp, 10" inlet and outlet. Made in the USA.

500177-08

MagneGrip control panel for 3 HP three phase fan, wireless capabilities, stop button, UL certified, NEMA 4 enclosure, variable timer, compatible with the above motor and fan.

500157-10

MagneGrip 10" upblast and rain damper, specifically designed for exhaust removal systems, galvanized

500151-10

MagneGrip 10" exhaust silencer, specifically designed for exhaust removal systems, galvanized

Misc.

MagneGrip misc. tailpipe reducers and exhaust clamps.

**ALL MAGNEGRIP PARTS AND SYSTEM'S ARE MADE IN THE USA**

## **2.ii      Material**

Will include Spiral pipe and Magnegrip product.

## 2. iii. Labor

Weidner has been installing exhaust removal systems for over 18 years and we have encountered many challenging and technically difficult installations. After completing the site survey on Wednesday December 10th, I did not encounter any major issues regarding the installation of the exhaust removal systems.

Weidner does not use subcontractors to install the MagneGrip equipment. Our installation technicians have been trained and certified by the factory. We do subcontract the electrical work to local certified electricians.

Apparatus bays are cleaned and straightened prior to leaving for the evening.

*MagneGrip Project Flow and understanding of this project.*

- MagneGrip equipment arrives the week prior to the start of projects.
- Installation schedule as follows:
  - Station #2
- Rental scissor lift arrives.
- Some or all apparatus will need to be moved out of bay during day to perform work.
- Installation of fan.
- Electrician wires fan and control panel.
- Fan and control panel tested for proper operation.
- Legs and feet are assembled and installed. Lasers are used to ensure alignment is correct.
- Reinforcement supports installed on legs.
- track is installed on legs and feet.
- Hoses cut, assembled, and installed.
- Duct installed, starting with trunkline then tied into track.
- The system runs for three minutes.
- Tailpipe fittings and adapters are installed on fire apparatus.
- Hoses are attached to vehicles and tested.
- Duty crew and officers are trained in the operation of the system.
- Inspections are conducted by city officials.

Add alternates

None needed

4.

#### **Proposed Timeline**

Glenwood Springs, timeline is to start and complete project and soon as possible Curtis Drage will oversee deliveries to the designated shipping location.

#### **On-Site Preparation and Uninstallation**

Mike Thomas and the team are scheduled to commence work on the Monday after equipment, starting with the removal of the old system fan and ducting at the first location.

Rental scissor lift will be on-site upon team arrival to facilitate project initiation.

#### **Installation Process**

Mike will set up the fan and control panel in preparation for the electrician.

Initial tasks include unboxing the MagneGrip System, aligning legs and feet with lasers for precision, and reinforcing supports.

Collaboration with on-site chiefs or captains will ensure efficient vehicle movement aligned with station operations.

#### **Track System Installation**

Construction will proceed with building and hanging the track system.

#### **Duct Work and Final Integration**

Mike Thomas will initiate duct work, starting from the truckline and integrating it with the track system.

Final tasks of the system installation involve installing tailpipe fittings and adapters on fire apparatuses, followed by hose attachment and testing on vehicles.

#### **System Testing, Training, and Inspection**

Upon completing installation and testing, the duty crew and officers will undergo comprehensive training on system operations.

City officials will conduct inspections to ensure compliance and operational readiness.

5.

### **Resources from staff**

#### **Project Team**

**Curtis Drage**- Is the exhaust removal manager on the The City of Glenwood Springs Project.

He will oversee the start and finish of the project working with install team, electrician, equipment rentals, waste removal. Curtis will handle all communication with factory, city officials, Fire chief and staff. Curtis has over 13 years of customer care, sales, and management experience.

Email: [Curtis.Drage@weidnerpro.com](mailto:Curtis.Drage@weidnerpro.com)

Phone: (801) 792-6505

**John Rech** – John is the exhaust systems manager at Weidner. He has been in safety sales for over 22 years with 17 years of sales experience in the fire service. He oversees all exhaust projects. He works one on one with fire departments, contactors, architects, and mechanical engineers.

Email: [john.rech@weidnerpro.com](mailto:john.rech@weidnerpro.com)

Phone: 385-226-09720972

**Erik Barlow** – Erik is the lead customer care person for Weidner. He has worked for Weidner for two years and assists with orders, order tracking, and project coordination. Erik teams with Mike Thomas to ensure the installation team has all the necessary equipment and supplies to execute the project in the most efficient way.

Email: [Erik.Barlow@weidnerpro.com](mailto:Erik.Barlow@weidnerpro.com)

Phone: 801-727-9298

**Mike Thomas** - Mike is the head of the installation team. He has worked for Weidner for 17 years and has over 20 years' experience installing Magen Grip systems. He has sold, installed, and serviced hundreds of systems all over the western US. He has been trained and certified by MagneGrip and conducts many factory installations that are outside of the Weidner territory. Mike is the go-to person when there are questions on unusual installations. He is very personable and is an excellent trainer in the operation of the systems.

Phone: 385-229-9464

**Dehn St. John** – Dehn is the service manager for Weidner. He has worked for Weidner for 10 years. He is a certified technician for MSA, Bauer compressors, Holmatro Rescue Tools and MagneGrip. He travels the western US for Weidner service. Dehn is a captain at Park City Fire Department where he has worked for 20 years.

Email: [dehnstjohn@weidnerpro.com](mailto:dehnstjohn@weidnerpro.com)

Phone: 801-541-5988

**Parker Colligan** – Parker is the logistics manager at Weidner. Parker has worked for Weidner for two years and he is responsible for all items that travel through the Salt Lake City Warehouse. Parker is the grandson of the founder.

### **MagneGrip Exhaust System Three - Year Warranty**

Weidner Fire, MagneGrip's factory authorized distributor and installation representative for the Western United States, hereby warrants the MagneGrip exhaust extraction system for a period of three years from date of installation completion, with a period of three years on labor.

All major components of the MagneGrip system are covered for a full **three years**:

- Fan
- Motor
- Controllor
- Track
- Legs
- Supports
- Aluminum Transition Elbow
- Lifting Elbow
- Duct System
- Labor to Repair or Replace Defective Parts
- Rubber Boot
- Magnepaks
- Magnets
- Transmitters (batteries excluded)
- Hoses
- Balancers
- Sensors

Weidner Fire and MagneGrip reserve the right to replace **or** repair the defective or damaged part. This warranty does not cover parts that fail due to misuse, abuse, or lack of maintenance. Regular adjustments/maintenance are not included in this warranty but will be thoroughly explained and demonstrated to the customer in our extensive training session at the time of installation. Weidner Fire will cover parts and labor for three years. Weidner will provide warranty assistance within twenty-four (24) hours.

### **Qualifications and References**

Weidner has installed many exhaust removal systems in fire departments like Glenwood Springs. Weidner's fire division has been working with fire departments for 20 years. We have worked with hundreds of departments on their AFG grant awards and understand the process of grant applications, awards, and reimbursement. Below is a list of departments with information required in the bid.

1. Meridian Fire Department – Weidner has designed and installed MagneGrip systems eight stations with straight suction rail. Financed through budget money and new construction projects. These projects started in 2019 and completed station #8 in Sept. 2023. Total amount of projects \$ 520,000. The Weidner service team performs annual maintenance on all systems in each station.  
33 E Broadway  
Meridian, ID 83642  
Stacy Redman  
sredman@meridiancity.org  
208-489-0374
2. SAC Metro Fire – Weidner has installed and designed 11 stations with MagneGrip rail and track. The department has a total of 41 stations and Weidner supplied parts for maintaining all stations. Financed through budget money, projects started in 2017 and are ongoing.  
10545 Armstrong Ave Suite 200  
Mather, CA  
Joe Eachus [Eachus.clarence@metrofire.ca.org](mailto:Eachus.clarence@metrofire.ca.org)

3. Sky Valley Fire – Weidner has designed and installed MagneGrip systems in 4 stations with VSR and track. Financed through AFG and projects started and completed in April 2024. Total amount of project \$ 170,000.  
501 Lewis Ave  
Gold Bar, WA 98251  
Assistant Chief Earnie Walters

## TERMS & CONDITIONS

### ***EXCLUSIONS TO THE PROJECT PROPOSED:***

1. Permits and fees of any kind are not included in this proposal; including but not limited to, any pertinent load calculations; technical drawings, submittals, shop drawings and permit drawings of any kind. Should any of these items be required, a separate quote will be required.
2. Outside services, not limited to but including, concrete work, exterior penetrations, fork or scissor lift rentals, etc. are not included, unless indicated in proposal.
3. Payment terms are noted on the proposal. Should you require different terms than noted, an addendum to this contract will need to be fully executed before revised terms will be accepted.
4. This proposal includes electrical work as quoted. Weidner Fire's electrical modifications to the building are specific to this project only, and include running wiring from building's existing electrical panel to exhaust system control panel, and from exhaust system control panel to fan and motor. Weidner Fire is assuming the building is currently equipped with electrical conditions sufficient to operate the proposed control panel and exhaust fan/motor. Electrical improvements/modifications required to enable proper operation of the proposed equipment are not the responsibility of Weidner Fire, but of the customer/owner of the building.
5. Weidner Fire is not responsible for installation of vehicle-mounted transmitter(s). If specified in proposal, Weidner Fire will provide hardware, with customer assuming responsibility and expense of installation on vehicles.

**SIGNATURE:** \_\_\_\_\_ **Date:** \_\_\_\_\_

*(Acceptance of Terms & Conditions)*

(Pages 1 and 2, inclusively.) The above prices, specifications, and Terms and Conditions are satisfactory and are hereby accepted. Weidner Fire is authorized to do the work as specified. By signing where indicated, \_\_\_\_\_, as agent for the organization proposed, hereby authorizes Weidner Fire to perform the work as specified on Page 1 of 2 of this proposal and agree and accept the Terms and Conditions (Page 2 of 2) of this proposal. Payment will be made as outlined above.

| <b>Background Info:</b>      | <p>City staff has allocated funds from the Street and Infrastructure Tax to complete smaller street removal or overlay projects so that the surfacing of our roads is always being improved. For 2025, staff bid the partial removal and partial overlay of Wulfsohn Road from East Meadows Drive, heading east, back to Midland Avenue. This work will remove the failing sections of roadway and replace them with the heavy asphalt section used elsewhere on Wulfsohn Road, it will remove the asphalt bus stop in front of the Community Center and replace it with concrete, it will remove the failing concrete valley pan and curb sections at the intersection of Wulfsohn and Midland and lastly the project scope covers a 2" mill and overlay of the remaining sections of roadway so that we have a new street at the completion of the project. Staff and the contractor will work with the Community Center staff to keep one access open at all time, coordination with the hotels and commercial business adjacent to this section of roadway, communications will be completed with the apartments on Flat Tops View Drive and lastly RFTA will be brought into the discussion to continue bus service throughout the project in some fashion. Public Information will be sent out to the residents on roadway closures and detours as the schedule is finalized. The budget proposed for this work in 2025 was \$200,000. Staff was aware that the project may come in over budget, but finds the project to be worth the dollar amount. Staff will control the budgets for Red Mountain North Phase II and Blake Avenue Phase II to accommodate for the additional \$198,777.50 that will be needed to complete this project.</p> |
| <b>Issues:</b>               | None at this time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Fiscal Impact:</b>        | A change in the Street Overlay line item within the Street and Infrastructure Tax will need to be complete to accommodate for the bid being over the approved 2025 budget.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Background Info:</b>      | <p>The city Engineering and Public Works Director added the design of Coach Miller Drive to the Street and Infrastructure Tax list for 2025 in the last council meeting. The plan is to fast track the project design so that if the city is awarded a grant that we will be apply for, that the construction of the project could still happen during the summer of 2025. The street needs to be removed and replaced. The design will encompass a new sidewalk from 14th to Park Drive, a full stormwater system with curb, gutter and storm sewer, new roadway section construction, parking improvements at the RFTA trail connection and a new 8" waterline loop around the high school. Staff will work with SEH to complete the design in time, and if the grant is not awarded, we will have a complete plan set to bid for the 2026 summer season ready to go. The budget for 2025 out of the S&amp;IT was set at \$125,000. The Water Department will be kicking in \$25,000 out of its System Improvement funds, which will cover the proposed amount.</p> |
| <b>Issues:</b>               | None at this time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Fiscal Impact:</b>        | The project fits within budgeted amounts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Staff Recommendation:</b> | Staff is recommending Council approve the award of Request for Proposal 2024-29P Coach Miller Drive and 14th Street Design to SEH, Inc for \$136,795.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

# Proposed Budget

SEH and our subconsultants will provide engineering and professional services as outlined in our project approach. This includes the following:

1. Project management
2. Topographic survey and control
3. ROW plans
4. Geotechnical investigations and pavement design
5. SUE / utility investigations, including potholes as determined necessary
6. Roadway and traffic design
7. Drainage design (including drainage report)
8. Utility design (including water line and electrical infrastructure)
9. Maintenance of traffic / construction phasing plans
10. Erosion control / SWMP
11. Plans, specifications, and estimates (50%, 90% and Bid submittals)
12. Bidding Assistance

Scope of work exclusions include the following:

1. Temporary and permanent easements and/or right-of-way exhibits/descriptions
2. Site-specific water quality features
3. Improvements to 14th Street (east of Pitkin Avenue) other than pavement rehabilitation and re-establishing pavement markings
4. Any structural design, such as walls, stairways, and custom utility structures
5. Electrical design, such as wire and control panel sizing
6. Formal public meeting presentations. SEH can provide plan and cross section exhibits for one public meeting and/or outreach campaign.
7. SEH is hiring all geotechnical testing and related services as a convenience to the City of Glenwood Springs and assumes no risk or liability for those services performed by third parties, even if hired by SEH.

SEH acknowledges receipt of Addendum 1, 2, and 3

## Potential Additional Scope Items

Additional Potholing for Quality Level A  
Each Mobilization: \$2,000  
Each Pothole: \$1,500

Additional Curb Ramp and Driveway Cut Redesign for PROWAG Compliance  
Each ADA Ramp: \$1,200  
Each Driveway Cut: \$500

**TOTAL PROPOSED BUDGET: \$127,595**

+ requested (6) potholes \$9,200

**GRAND TOTAL BUDGET: \$136,795**

| <b>Presented By:</b>         | Matthew Langhorst                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Strategic Goals:</b>      | Preserve and Improve Infrastructure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Background Info:</b>      | The streets department awards the city wide striping to a qualified contractor every 3 to 4 years to stripe city streets at the beginning of the summer months for traffic control and safety. This year one bidder responded to the RFP, but that bidder is the contractor that has been striping the streets for the last 4 years. Current budget for striping within the street tax is \$45,000 which would normally have covered the striping requirements, but this year we proposed to have all centerlines, turn lanes, and all bike lanes refreshed to bring the city back up to our standards. Staff can move budget from crack sealing to this line item to cover the overage and we will plan for 2026 at this level to repaint all stripes each year. |
| <b>Issues:</b>               | None at this time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Fiscal Impact:</b>        | Small adjustment to the striping budget, which can be accommodated for within the overall budget.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Legal Review:</b>         | None at this time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Staff Recommendation:</b> | Staff would recommend council approve the award for, Request for Proposal 2024-30P city wide street striping, go to Stripes a Lot for \$58,715.90 with the ability to extend the contract for up to three more years upon staff recommendations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

26 January 2025

City of Glenwood Springs  
RFP 2024-30P  
Citywide Street Striping Plan

To Whom it May Concern,

We are writing to express our interest in the upcoming 2025 Citywide Street Striping Plan, City of Glenwood Springs. As the owner of Stripe A Lot, Inc., a reputable striping company with a solid 20-year track record, I believe that our experience, commitment to quality, and familiarity with the local roadways make us the ideal choice for this project.

Stripe A Lot was established in 2005, and throughout the past 20 years, we have accumulated extensive expertise in pavement marking and related services throughout Colorado. We are particularly proud of our long-standing relationship with the City Glenwood Springs. Our crew possesses an understanding of the town's layout, and we have developed a strong partnership with the Public Works Department.

As a company deeply rooted in Colorado, we take pride in the quality of our workmanship. Our commitment to excellence extends beyond the technical aspects of striping, including line removal, inlaid thermoplastic, crosswalks, and stop bars.

At Stripe A Lot, we prioritize customer service and effective communication. Our goal is not only to meet but exceed your expectations, ensuring a smooth and collaborative process from project initiation to completion.

We appreciate your time and consideration.

Kind Regards,

A handwritten signature in black ink that reads "Denise C. Allison".

Denise C. Allison, President/Owner  
Stripe A Lot, Inc.

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Intergovernmental Agreement with Garfield County Regarding the April 1, 2024 Municipal Election

**Action Requested:** Approval of the Intergovernmental Agreement (IGA) with the County for the municipal election.

**Department:** City Clerk

**Presented By:** Ryan Muse

**Strategic Goals:** Provide Efficient and Responsive City Government

**Background Info:** The City needs to execute an agreement with the Clerk and Recorder's office of Garfield County to help collect and count the ballots in the upcoming municipal election.

**Issues:** None

**Fiscal Impact:** \$1,500 from the General Fund in 2025.

**Legal Review:** Legal approved the agreement.

**Staff Recommendation:** Execution of Intergovernmental Agreement with Garfield County.

## INTERGOVERNMENTAL AGREEMENT FOR ELECTION SERVICES

This Intergovernmental Agreement for election services is entered into this \_\_\_\_\_ day of \_\_\_\_\_, 2025, by and between the, City of Glenwood Springs, a Colorado Home Rule Municipality (hereinafter the “City”), and the Garfield County Clerk & Recorder, (hereinafter the “Clerk”), collectively referred to as the “Parties”.

WHEREAS the City has requested assistance from the Clerk for the Municipal Election to be held on April 1, 2025, (hereinafter the “Election”) and

WHEREAS the Clerk is willing to assist the City in certain aspects of the Election to effectuate a smooth and efficient election process.

NOW THEREFORE, for and in consideration of the mutual covenants and agreements of the parties as set forth herein, the Parties agree as follows:

1. **Term of Agreement:** This agreement applies to the April 1, 2025, Municipal Election and is effective from the date of execution to the conclusion of any appeal or contest of the Election.
2. **Clerk’s Duties:** The Clerk agrees to:
  - a. Conduct CBI background checks for all Clerk staff assisting with the Election. Copies of these checks are available on request.
  - b. Use the ballot content provided by the City to design the ballot for the Election. When completed, the Clerk will send the ballot proof to the City by email for final approval.
  - c. Once the ballot is approved by the City, the Clerk will email the City’s designated print vendor a pdf file of the approved ballot for printing of the ballot test deck to be used in the logic and accuracy test (LAT). If changes to the ballot are required after the LAT, the Clerk will send the final pdf ballot proof to both the City and the City’s designated print vendor.
  - d. In partnership with City representatives, conduct the logic and accuracy test (LAT) prior to the City’s designated print vendor printing any ballots for voters.
  - e. Provide the City and the City’s designated print vendor with the ballot label extract for both the UOCAVA (military and overseas voters) and main ballot mailings on the date agreed upon by the City and print vendor. This extract will be in a txt format.
  - f. Provide the City with supplemental ballot extracts via email for voters who register to vote or submit a change of address after the initial voter extract is sent to the designated print vendor. This extract will be sent in a txt format and will be sent at a frequency requested by the City. The final extract will be sent on the last day the City can mail ballots to voters as specified by statute.
  - g. Allow City voters to drop off voted ballots in the Garfield County 24/7 ballot drop box on 8<sup>th</sup> Street. Monday through Thursday, one Clerk staff will meet two City staff/election judges at the drop box at an agreed time in order for the City to collect ballots from the box. After picking up ballots on Thursday, the Clerk will post a sign on the drop box indicating the box will not be checked again until the following Monday (since the City is closed on Fridays).
  - h. At 7 pm on Election night, one Clerk staff will go with two City staff/election judges to cover the 24/7 ballot drop box on 8<sup>th</sup> Street. The Clerk will provide the cover for the drop box.

- i. Provide a Clear Ballot Municipal Kit (laptop, scanner and Clear Count software) to scan and tabulate the voted ballots. Clerk election staff will transport the Municipal Kit to the Glenwood Springs City Hall in the late afternoon on Election day and will work with the City's staff and election judges to scan all voted ballots received by 7 pm and accepted by the City's election judges.
  - j. Provide written guidance to the City on how to prepare the ballots for scanning and tabulation with the Clear Ballot Municipal Kit.
  - k. Once all the voted ballots are scanned on Election night, the Clerk will tabulate election results and provide reports to the City.
  - l. Eight days post-election, the City will bring any unscanned ballots to the Clerk's office for scanning and tabulation of final results.
  - m. Invoice the City a flat fee of \$1,500.00 within two (2) weeks of the Election. This fee covers: Clerk staff time spent in setting up the ballot, logic and accuracy testing, providing the designated print vendor with the ballot pdf and ballot label extracts, general office supplies needed for logic and accuracy testing, scanning and tabulation of all ballots (election night and eight days post-election), and for use of the Clear Ballot Municipal Kit. Any items provided to the City for their use in conducting the Election will be charged separately (i.e. UOCAVA envelopes).
  - n. If any contest is close enough for a recount, the Clerk will charge the City an additional amount to cover staff time needed to assist with the recount process.
3. **City's Duties:** The City agrees to:
- a. Email the Clerk (Jacklyn Harmon – [jharmon@garfield-county.com](mailto:jharmon@garfield-county.com)) contact information (name, email and phone number) for primary and secondary points of contact for the Election.
  - b. Provide the Clerk with certified ballot content as soon as possible once the ballot language is approved by the City Council. Please contact Edna Place at 970-384-3700 x 1804 or [eplace@garfield-county.com](mailto:eplace@garfield-county.com) for the format required for content certification.
  - c. Proof and return signed verification that the ballot proof is acceptable by email to the Clerk (Jacklyn Harmon - [jharmon@garfield-county.com](mailto:jharmon@garfield-county.com)) and Edna Place ([eplace@garfield-county.com](mailto:eplace@garfield-county.com)) as soon as possible after receipt of the ballot proof.
  - d. Conduct all required background checks for City staff and election judges.
  - e. Provide Clerk election staff with the name and contact information for the City's designated print vendor.
  - f. Work with Deputy Clerk, Edna Place to set the date for the logic and accuracy testing (LAT).
  - g. Coordinate with the City's designated print vendor to have a ballot test deck printed for use in the LAT.
  - h. Provide at least two staff members or election judges to assist with logic and accuracy testing of the Clear Ballot Municipal Kit. This testing will be done at the Clerk's office in Glenwood Springs. The LAT is conducted to verify that the equipment in the Municipal Kit is correctly scanning and tabulating the marked ballots.
  - i. Mark and hand tally all ballots to be used in the LAT. These ballots are to be transported between the City and Clerk's office in a sealed container.
  - j. Upon completion of the LAT, communicate with City's designated print vendor that the ballot is final and ready for printing.
  - k. Prepare ballots for scanning according to the written guidance from the Clerk.
  - l. Provide the Clerk a new, encrypted flash drive so all reports for the election can be downloaded from the Clear Ballot Municipal Kit for the City's use.

- m. Once ballots have been mailed out, send two City staff or election judges to meet Clerk staff at the Garfield County 24/7 ballot box on 8<sup>th</sup> Street to collect ballots. This is to be done daily, Monday through Thursday. Since the City is closed on Fridays, the ballot box will not be checked on Fridays. The City will provide the necessary ballot box to transport the ballots back to their office.
  - n. Eight days post-election, two City staff or election judges to bring any remaining ballots to scan to the Clerk's office for final scanning and tabulation.
  - o. Reimburse the Clerk a flat fee of \$1,500.00 for assisting with the Election. Any items provided to the City for their use in conducting the Election will be charged separately (i.e. UOCAVA envelopes).
  - p. If any race is close enough for a recount, the City agrees to reimburse the Clerk for staff time needed to assist with the recount process.
4. **Indemnification:** The City agrees to indemnify, defend and hold harmless the Clerk from any and all loss, costs, demands or actions, arising out of or related to any actions, errors or omissions of the City in completing its responsibilities relating to the election.
  5. **Integration:** The Parties acknowledge that this Agreement constitutes the complete agreement and understanding between them relating to the subject matter hereof and that no Party is relying upon any oral representations made by another Party or employee, agent or officer of the Party.
  6. **Amendments:** This Agreement can be amended only in writing with signature of all Parties.
  7. **Notices:** All notices, requests, demands, consents, and other communications pertaining to this Agreement shall be transmitted in writing and shall be deemed duly given when received by the Parties at their addresses below or agreed upon email addresses as provided to the other party below: City of Glenwood Springs, 101 W 8<sup>th</sup> St, Glenwood Springs, CO 81601 and Garfield County Clerk, 109 8<sup>th</sup> St, Suite 200, Glenwood Springs, CO 81601.

IN WITNESS WHEREOF, the City and the Clerk have caused this Agreement to be fully executed in an electronic format or duplicate signed originals with each party receiving a fully executed copy.

| <b>Background Info:</b>      | <p>Council approved a memorandum of understanding with Habitat for Humanity in December 2022 for the development of two City-owned parcels for affordable and workforce housing. Since that time Habitat for Humanity received entitlement to build a for-sale townhome project on property located at 8th and Midland Avenue.</p> <p>Since the time of execution, there have been significant changes to the project, including the determination that the Iddings Parcel, located on Airport Road, is not suitable for development, as well as major construction cost increases. Due to the changing situation, Habitat has proposed amendments for consideration to maintain the project's financial feasibility and function.</p> <p>City Council reviewed the proposed changes at its January 2, 2025 regular meeting and approved the amendment including the following changes:</p> <ol style="list-style-type: none"><li>1. Removal of all mention of the Iddings parcel, or mention of "two" projects.</li><li>2. The 8<sup>th</sup> and Midland Project unit count is reduced to 6 total units.</li><li>3. The City of Glenwood Springs will pay Habitat \$150,000 for the allocation of one priority unit for City of Glenwood Springs Employees.</li><li>4. Habitat may allow up to two units for outside organization priority units.</li><li>5. The City agrees that Habitat's L3 project, once condominiumized and available for sale, can be utilized for the pool of units offered up in the priority unit process.</li><li>6. The Area Median Income limit is increased to 100% Area Median Income.</li><li>7. The average initial target sales price is increased to \$375,000.</li><li>8. All other terms and conditions of the January 30, 2023 MOU shall remain in effect and unchanged.</li></ol> <p>These approved changes are reflected in the attached Second Amendment to Memorandum of Understanding with Habitat for Humanity Roaring Fork.</p> |

| <b>Fiscal Impact:</b>        | The City will pay an additional \$150,000 for a priority unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Legal Review:</b>         | Legal has reviewed the Amendment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Staff Recommendation:</b> | Staff recommends approval of the Amendment document as the changes were approved by Council on January 2, 2025.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## SECOND AMENDMENT TO MEMORANDUM OF UNDERSTANDING

This Amendment to Memorandum of Understanding ("First Amendment") is made and entered into this \_\_\_\_ day of \_\_\_\_\_ 2025, by and between the City of Glenwood Springs, a Colorado home rule municipality (the "City"), and Habitat for Humanity of the Roaring Fork Valley, Inc., a Colorado nonprofit corporation ("Habitat").

WHEREAS, on January 30, 2023, the Parties entered into a Memorandum of Understanding (the "MOU"); and

WHEREAS, on April 4, 2024, the Parties amended the Memorandum of Understanding to reflect the determination that the Airport Road Project a/k/a the Iddings Parcel was not suitable for development; and

WHEREAS, on January 2, 2025 City Council approved amending the Memorandum of Understanding in light of higher project costs and associated gaps in funding necessary for project feasibility, and

WHEREAS, on January 2, 2025 City Council approved obtaining one priority unit for City of Glenwood Springs employees as allowed in the MOU, and

WHEREAS, the Parties desire to enter into this Second Amendment to the MOU on the terms and conditions stated herein.

NOW THEREFORE, for valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

1. The 8<sup>th</sup> and Midland Project unit count is reduced to 6 total units.
2. The City of Glenwood Springs will pay Habitat \$150,000 for the allocation of one priority unit for City of Glenwood Springs Employees.
3. Habitat may allow up to two units for outside organization priority units.
4. The City agrees that Habitat's L3 project, once condominiumized and available for sale, can be utilized for the pool of units offered up in the priority unit process.
5. The Area Median Income limit is increased to 100% Area Median Income.
6. The average initial target sales price is increased to \$375,000.
7. All other terms and conditions of the January 30, 2023 MOU shall remain in effect and unchanged.

**Agenda Item:** Ordinance 2025-02; Changing the Name of the Street Tax Fund. Second Reading

**Action Requested:** Approval of ordinance to change the name of the street tax fund.

**Department:** City Administration

**Presented By:** Steve Boyd

**Strategic Goals:** Provide Efficient and Responsive City Government

**Background Info:** With the passage of the new street tax the name of the fund needs to include the word infrastructure.

**Issues:** None at this time.

**Fiscal Impact:** None.

**Legal Review:** Legal drafted the ordinance.

**Staff Recommendation:** Staff recommends approval.

## ORDINANCE NO. 02

Series of 2025

### AN ORDINANCE OF THE CITY OF GLENWOOD SPRINGS, COLORADO, AMENDING ORDINANCE 25 SERIES OF 2024 RE NAMING SECTION 040.010.040 (d) OF THE GLENWOOD SPRINGS MUNICIPAL CODE.

**WHEREAS**, the City of Glenwood Springs (“Glenwood Springs” or the “City”) is a home-rule municipality organized under Article XX of the Colorado Constitution and with the authority of the Glenwood Springs Home Rule Charter (the “Charter”); and

**WHEREAS**, by Resolution No. 25, Series 2024, the Glenwood Springs City Council (the “City Council”) referred to the City’s electorate a ballot question to levy a total tax of 1 cent on sales and use comprised of the renewal of the current half cent tax and an additional new half cent tax; and

**WHEREAS**, by Ordinance No. 19 Series 2024, the City Council declared the repeal and replacement of 040.010.040 (d) of the Glenwood Springs Municipal Code (the “Code”); and

**WHEREAS**, the City Council wishes to amend Exhibit A of Ordinance No. 25 Series 2024 to more fully align with the purpose of the tax; and

**WHEREAS**, the City Council finds and declares that **Exhibit A**, of Ordinance No. 25 Series 2024 should be amended as set forth in **Exhibit A** attached hereto and incorporated by this reference implements the will of the City’s electors by providing for the levy of such taxes in the event that the electors approve, is in the best interests of the City.

### **NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENWOOD SPRINGS, COLORADO, ORDAINS:**

**Section 1.**     **Recitals.** The foregoing recitals are incorporated herein as if set forth in full.

**Section 2.**     **Amendment.** Exhibit A of Ordinance 25, Series 2024 is hereby amended as set forth in the attached Exhibit A. All other provisions of Ordinance 25, Series 2024 shall remain in effect as adopted.

# Glenwood Springs - Tobacco Retail License update

## February 6, 2025

### Goals in 2019

- Restrict youth access to tobacco
- Flavor Ban - Diminish the appeal of tobacco products
- Increase the cost
- Comply with State law including increasing the minimum age to 21
- Support schools' prevention education and restorative response to infractions - no MIP
- Promote youth and adult cessation: [COquitline.org](https://www.COquitline.org)

# Glenwood Springs - TOBACCO PRODUCT RETAIL LICENSE

## 050.110.010 - Purpose and applicability.

The purpose of this article is to establish license requirements for tobacco product and tobacco paraphernalia **retailers** and to set forth the **requirements for** the sale of tobacco products and tobacco paraphernalia to persons under twenty-one (21) years of age to **protect the health**, safety and welfare of individuals in the City, to encourage responsible tobacco and tobacco paraphernalia retailing and to **reduce illegal sales** of said products in Glenwood Springs, Colorado.

## Tobacco Ordinance Fact Sheet -

<https://www.cogs.us/DocumentCenter/View/6077/Tobacco-Ordinance-Fact-Sheet>

# Tobacco Ordinance Fact Sheet

## City of Glenwood Springs

---

### Overview

Glenwood Springs City Council recently passed new legislation regarding tobacco laws in Glenwood Springs city limits.

#### Resolution 2019-34

- Establishment of licensing requirements for the retail sale of tobacco products. All tobacco retailers must have a license through the City of Glenwood Springs and pay a \$1,000 initial licensing fee to sell tobacco and a \$500 annual renewal fee. In effect on January 1, 2020.

#### Ordinance no. 21, series of 2019.

- Raised the minimum legal sale age of tobacco products from 18 to 21 years of age. In effect September 15, 2019.
- Prohibits the sale of all flavored tobacco products. In effect October 15, 2019.

#### Ordinance no. 26, series of 2019.

- Permits persons 18 years of age and older to handle tobacco products in the course of

## **ORDINANCE NO. 21**

Series of 2019

**AN ORDINANCE OF THE CITY OF GLENWOOD SPRINGS, COLORADO, ESTABLISHING LICENSING REQUIREMENTS FOR THE RETAIL SALE OF TOBACCO PRODUCTS, RAISING THE MINIMUM AGE OF TOBACCO PRODUCT PURCHASE TO TWENTY-ONE YEARS OF AGE, FURTHER REGULATING THE SALE OF TOBACCO PRODUCTS, AND AMENDING TITLES 050 AND 120 OF THE GLENWOOD SPRINGS MUNICIPAL CODE.**

**WHEREAS**, the City of Glenwood Springs (“Glenwood Springs” or the “City”) is a home-rule municipality organized under Article XX of the Colorado Constitution and with the authority of the Glenwood Springs Home Rule Charter; and

**WHEREAS**, tobacco use in the U.S. has declined substantially since the Surgeon General’s 1964 report, from 42 percent smoking to now about 14 percent for adults; and

**WHEREAS**, despite such declines, tobacco use remains one of the greatest public health challenges in the United States where almost 500,000 Americans still die prematurely each year from diseases related to cigarette smoking, comprising 85 percent of lung cancer deaths, which in Colorado is the number one cause of preventable death and accounts for 5,100 deaths per year; and

**WHEREAS**, it is estimated that smoking directly causes \$1.89 billion in annual health care costs in Colorado; and

**WHEREAS**, 90% of adult smokers started smoking before the age of 18 and each day more than 3,000 adolescents in the U.S. try their first cigarette; and

**WHEREAS**, youth use of electronic cigarettes (e-cigarettes), flavored tobacco, and similar products – many of which are procured by internet sales – is associated with future cigarette use; and

**WHEREAS**, the Centers for Disease Control and Prevention reports that there were 1.5 million more current youth e-cigarette users and 38.3 percent more tobacco use among high school students in 2018 than 2017; and

**WHEREAS**, research shows that youths acquire tobacco products from their peers and that 90% of the “social sources” (friends and family) of tobacco for 12-18 year old users are 18-21 year old persons; and

**WHEREAS**, research shows that youth typically do not make the additional effort to travel to neighboring localities to acquire tobacco when if the age to purchase tobacco has increased to 21 in their locality; and

**WHEREAS**, over 225 U.S. local governments and the states of California and Hawaii have enacted into law regulations prohibiting the sale of tobacco products to individuals under the age of 21 and research has shown such regulations are effective in decreasing high school tobacco use by up to 50%; and

**WHEREAS**, in 2019 the Colorado General Assembly enacted House Bill 19-1033 which removed restrictions and penalties on local government regulation of tobacco products; and

**WHEREAS**, City Council finds and declares that the amendments to the Municipal Code regarding the tobacco retail licensing requirements, raising the minimum tobacco purchase age, prohibitions on flavored tobacco and internet sales set forth herein are proper in light of the needs and desires of the City and in the promotion of the public health, safety and welfare of the City's residents and visitors.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENWOOD SPRINGS, COLORADO, ORDAINS:**

**Section 1.** The foregoing recitals are incorporated herein as if set forth in full.

**Section 2.** A new Article 110 of Title 050 of the Glenwood Springs Municipal Code is hereby adopted as set forth in **Exhibit A** attached hereto.

**Section 3.** Title 120 is hereby amended as set forth in **Exhibit B** attached hereto.

**Section 4.** The Code Amendments contained herein by Exhibits A and B shall become effective as follows:

- (a) 050.110.030 Minimum Legal Sales Age, 050.110.050(b), and all changes contained in Exhibit B shall take effect September 15, 2019.
- (b) The prohibition of the Sale of Flavored Tobacco Products as defined in 050.110.020 shall take effect October 15, 2019.
- (c) The provisions of 050.110.040 through 050.110.140 shall take effect January 1, 2020 unless otherwise specified above.
- (d) All other provisions shall take effect in accordance with the Charter.

**Section 5.** The Code amendments contained herein by Exhibits A and B shall become effective in accordance with the City Charter ten days after publication.

Exhibit A

**ARTICLE 050.110 - TOBACCO PRODUCT RETAIL LICENSE**

050.110.010. - Purpose and Applicability.

- (a) The purpose of this Article is to establish License requirements for Tobacco Product and Tobacco Paraphernalia Retailers and to set forth the requirements for the sale of Tobacco Products and Tobacco Paraphernalia to persons under twenty one years of age to protect the health, safety and welfare of individuals in the City, to encourage responsible Tobacco and Tobacco Paraphernalia retailing and to reduce illegal sales of said products in Glenwood Springs, Colorado.
- (b) This Article applies to Tobacco Product and Tobacco Paraphernalia Retailers, as defined herein

050.110.020. - Definitions.

The following words and phrases, as used in this Article, shall have the following meanings:

**Accessory** means any product that is intended or reasonably expected to be used with or for the human consumption of a Tobacco Product; does not contain tobacco and is not made or derived from tobacco; and meets either of the following: (1) is not intended or reasonably expected to affect or alter the performance, composition, Constituents, or characteristics of a Tobacco Product; or (2) is intended or reasonably expected to affect or maintain the performance, composition, Constituents, or characteristics of a Tobacco Product but (a) solely controls moisture and/or temperature of a stored Tobacco Product; or (b) solely provides an external heat source to initiate but not maintain combustion of a Tobacco Product. Accessory includes, but is not limited to, carrying cases, lanyards and holsters.

**Adult-Only Establishment** means a facility where the operator ensures or has a reasonable basis to believe, such as by checking the identification of any person appearing to be under the age of thirty (30), that no person under the Legal Age is permitted entrance.

**Characterizing Flavor** means a Distinguishable taste or aroma or both, other than the taste or aroma of tobacco, imparted either prior to or during consumption of a Tobacco Product or any byproduct produced by the Tobacco Product. Characterizing flavors include, but are not limited to, tastes or aromas relating to any fruit, chocolate, vanilla, honey, candy, cocoa, dessert, alcoholic beverage, menthol, mint, wintergreen, herb, spice; provided, however, that a Tobacco Product shall not be determined to have a characterizing flavor solely because of the use of additives or flavorings or the provision of ingredient information. Rather, it is the presence of a Distinguishable taste or aroma or both, as described in the first sentence of this definition that constitutes a characterizing flavor.

**Cigarette** means any product that contains tobacco or nicotine, that is intended to be burned or heated under ordinary conditions of use, and consists of or contains:

- (1) any roll of tobacco wrapped in paper or in any substance not containing tobacco;

- (2) tobacco in any form that is functional in the product, which, because of its appearance, the type of tobacco used in the filler, or its packaging or labeling, is likely to be offered to, or purchased by consumers as a cigarette; or
- (3) roll of tobacco wrapped in any substance containing tobacco that, because of its appearance, the type of tobacco used in the filler, or its packaging and labeling, is likely to be offered to, or purchased by, consumers as a cigarette described in subparagraph (1)(a) above.
- (4) the term includes all "roll-your-own," i.e., any tobacco that, because of its appearance, type, packaging, or labeling, is suitable for use and likely to be offered to, or purchased by consumers as tobacco for making cigarettes.

**Component or Part** means any software or assembly of materials intended or reasonably expected:

- (1) to alter or affect the Tobacco Product's performance, composition, Constituents, or characteristics; or (2) to be used with or for the human consumption of a Tobacco Product or Electronic Smoking Device. Component or Part excludes anything that is an Accessory, and includes, but is not limited to e-liquids, cartridges, certain batteries, heating coils, programmable software and flavorings for Electronic Smoking Device.

**Distinguishable** means perceivable by either the sense of smell or taste.

**Electronic Smoking Device** means an electronic device that, when activated, emits a vapor, aerosol, fume or smoke that may be inhaled or absorbed by the user, including, but not limited to, an a-cigarette, e-cigar, e-pipe, vape pen, e-hookah and similar devices. Electronic smoking device includes any component, part, or accessory of such a device, whether or not sold separately, and includes any substance, with or without nicotine, intended to be aerosolized, vaporized or produces a fume or smoke during the use of the device intended for human consumption.

**Flavored Tobacco Product** means any Tobacco Product that imparts a Characterizing Flavor.

**Hearing Officer** means the person appointed by the City Manager.

**Licensee** means the owner or holder of a Tobacco Product Retailer License.

**License** refers to the Tobacco Product Retailer license.

**Licensing Administrator** means the person(s) within the City government designated with responsibilities by the City Manager for license issuance, renewal and collection of fees.

**Minimum Legal Sales Age** means twenty-one (21) years of age or older.

**Mobile Vending** means any sales other than at a fixed location.

**Person** means natural person, a joint venture, joint-stock company, partnership, association, firm, club, company, corporation, business, trust or organization, or the manager, lessee, agent, servant, officer or employee of any of them.

**Self-Service Display** means the open display or storage of Tobacco Products in a manner that is physically accessible in any way to the general public without the assistance of the retailer or employee of the retailer and a direct person-to-person

transfer between the purchaser and the retailer or employee of the retailer. A vending machine is a form of self- service display.

**Tobacco Paraphernalia** means any item designed for the consumption, use or preparation of Tobacco Products.

**Tobacco Product** means 1) any product which contains, is made or derived from tobacco or used to deliver nicotine or other substances intended for human consumption, whether heated, chewed, absorbed, dissolved, inhaled, snorted, sniffed or ingested by any other means, including, but not limited to Cigarettes, cigars, little cigars, chewing tobacco, pipe tobacco, snuff, bidis, snus, mints, hand gels; or 2) electronic smoking device. Notwithstanding any provision of subsections 1) and 2) to the contrary, "tobacco product" includes any component, part, accessory or associated tobacco paraphernalia of a tobacco product whether or not sold separately. The term "Tobacco Product" does not include: (i) any product that contains marijuana; or (ii) any product made from or derived from tobacco and approved by the Food and Drug Administration (FDA) for use in connection with cessation of smoking.

**Tobacco Product Retail Location or Retail Location** means any premises where Tobacco Products are sold or distributed to a consumer including, but not limited to, hookah bar, lounge or cafe, any grounds occupied by a retailer, any store, stand, outlet, vehicle, cart, location, vending machine or structure where Tobacco Products are sold.

**Tobacco Product Retailer** means any Person who sells, offers for sale, or does or offers to exchange for any form of consideration, Tobacco Products, or Tobacco Paraphernalia. "Tobacco Retailing" shall mean the doing of any of these things. This definition is without regard to the quantity of Tobacco Products or Tobacco Paraphernalia sold, offered for sale, exchanged, or offered for exchange.

**Tobacco Product Retailing** means the selling, offering for sale, or exchanging for any form of consideration a Tobacco Product, including internet or e-commerce sale or delivery.

**Vending Machine** shall mean any mechanical, electrical, or electronic self-service device which, upon insertion of money, tokens, or any other form of payment dispenses product.

050.110.030. - Minimum legal sales age.

Tobacco Products shall not be sold to any person younger than the Minimum Legal Sales Age.

050.110.040. – License required.

- (a) On or after Jan 1, 2020, it shall be unlawful for any person to act as a Tobacco Product Retailer in the City unless he or she has obtained a License and maintains the same in full force and effect pursuant to this Article for each location where Tobacco Product Retailing occurs.
- (b) No license shall be issued to authorize Tobacco Product retailing anywhere other than at a fixed location within the City that is designated in the License application and approved by the Licensing Administrator. Tobacco Product Retailing by persons on foot, from vehicles, through Mobile Vending, or internet or e-commerce is prohibited.

- (c) No Licenses within 500 feet of schools. No Licenses shall be issued to retailers located within 500 feet from any public or parochial school as determined by the Licensing Administrator. This restriction shall not apply to an existing Retail Location within 500 feet of a school.
- (d) No Licenses shall be issued to applicants under the Minimum Legal Sales Age.
- (e) Tobacco Retailing without a valid License is a violation of the Article.

050.110.050. - Conditions of the Tobacco Product Retail License.

- (a) Display of License. Each License shall be prominently displayed in a publicly visible location at the licensed Tobacco Product Retail Location.
- (b) Display of Minimum Legal Sales Age Requirements. The requirement of the Minimum Legal Sale Age for the purchase of Tobacco Retail Product shall be prominently displayed in the entrance (or other clearly visible location) of the Tobacco Product Retail Location and contain at minimum the following:

WARNING  
IT IS ILLEGAL FOR ANY PERSON UNDER  
TWENTY-ONE YEARS OF AGE TO PURCHASE  
CIGARETTES AND TOBACCO PRODUCTS  
AND, UPON CONVICTION, A FINE  
MAY BE IMPOSED.

- (c) Locations. A Tobacco Product Retail Location may only have one active License at one time. Every License is separate and distinct and specific to a designated location.
- (d) Minimum age for persons handling Tobacco Products. No Person who is younger than the Minimum Legal Sales Age shall, while employed at a Tobacco Product Retail Location, sell, stock, retrieve, or otherwise handle Tobacco Products or Tobacco Paraphernalia.
- (e) Prohibition of Self-Service Displays. Licensees shall stock and display all Tobacco Products and Tobacco Paraphernalia in a manner so as to make all such products inaccessible to customers without the assistance of a retail clerk, thereby requiring a direct face-to-face exchange of the Tobacco Product or Tobacco Paraphernalia from an employee of the business to the customer except in an Adult-Only Establishment.
- (f) Prohibition on Flavored Tobacco Sales. Licensees shall not sell, offer for sale or possess with the intent to sell any Flavored Tobacco Product(s).
- (g) Requirements of positive identification. No person engaged in Tobacco Product Retailing shall sell or transfer a Tobacco Product or Tobacco Paraphernalia to another person who appears to be under the age of forty (40) years without first examining the identification of the recipient to confirm that the recipient is at least the Minimum Legal Sales Age.

050.110.060. - Application procedure.

- (a) An application for a License shall be submitted and signed by an individual authorized by the person or entity making application for the License. It is the responsibility of each applicant and/or Licensee to be informed regarding all laws applicable to tobacco retailing, including those laws affecting the issuance of said License. No applicant and/or Licensee may rely on the issuance of a License as a determination by the City that the proprietor has complied with all applicable tobacco retailing laws.
- (b) All applications shall be submitted on a form supplied by the Licensing Administrator.
- (c) A licensed Tobacco Product Retailer shall inform the Licensing Administrator in writing of any change in the information submitted on an application for a License within thirty (30) business days of a change.
- (d) All License applications shall be accompanied by the payment in full of all fees as required.

050.110.070. Issuance of a Tobacco Product License.

Upon the receipt of a completed application for a License as required by this Article, the Licensing Administrator shall sign and issue a License within thirty (30) days which period may be extended by the Licensing Administrator for good cause unless substantial evidence demonstrates that one or more of the following bases for denial exists:

- (a) The information presented in the application is incomplete, inaccurate, or false;
- (b) The applicant seeks authorization for a License at a location where this Article prohibits the issuance of a License;
- (c) The applicant seeks a License for a location that is not appropriately zoned for the use;
- (d) The applicant seeks authorization for a License and the applicant's current License is suspended or revoked;
- (e) The applicant is not qualified to hold the requested License under the provisions of this Article;
- (f) The applicant and/or retail location is not in compliance with all City, state or federal laws;
- (g) The applicant is indebted to, or obligated in any manner to the City for unpaid taxes, liens or other monies; or
- (h) The payment of the licensing fee in the full amount chargeable for such License does not accompany such License application.

050.110.080. - Denial of Tobacco Product License.

- (a) If the Licensing Administrator denies the issuance of the License, the Licensing Administrator shall notify the applicant in writing by regular mail postage prepaid on the address shown in the application. The notice shall include the grounds for denial. Notice is deemed to have been properly given upon mailing.
- (b) An applicant has the right to appeal the Licensing Administrator's denial of an application to the Hearing Officer that shall be appointed by the City Manager. Such an

appeal shall be initiated by filing a written request with the Licensing Administrator within twenty (20) days of the date of the notice of denial of the issuance of a License.

- (c) The applicant's failure to timely appeal the decision of the Licensing Administrator is a waiver of the applicant's right to contest the denial of the issuance of the License.
- (d) The appeal, including any right to further appeals, shall be conducted and controlled by the provisions of Rule 106(a)(4) of the Colorado Rules of Civil Procedure. The standard of proof at such appeal shall be a preponderance of the evidence and the burden of proof shall be upon the applicant. The Licensee's failure to timely appeal the decision is a waiver of the Licensee's right to contest the suspension or revocation of the License.

050.110.090. - License term, renewal and expiration.

- (a) Term. All Licenses issued under this Code shall be for the period of one (1) year.
- (b) Renewal of License. A Licensee shall apply for the renewal of the License and submit the renewal License fee no later than thirty (30) days prior to expiration of the existing term. The Licensing Administrator shall renew the License prior to the end of the term, provided that the renewal application and fee were timely submitted and the Licensing Administrator is not aware of any fact that would have prevented issuance of the original License or issuance of the renewal.
- (c) Expiration of License. A License that is not timely renewed shall expire at the end of its term. The failure to timely obtain a renewal of a License requires submission of a new application. There shall be no sale of any Tobacco Products after the License expiration date and before the new License is issued.

050.110.100. - License non-transferable.

- (a) A License shall not be transferred from one (1) person to another or from one location to another.
- (b) When a License has been issued to a husband and wife, or to general or limited partners, the death of a spouse or partner shall not require the surviving spouse or partner to obtain a new License for the remainder of the term of that License. All rights and privileges granted under the original License shall continue in full force and effect as to such survivors for the balance of the term of the License.

050.110.110. - Compliance monitoring.

- (a) Compliance monitoring of this Article shall be by the Glenwood Springs Police Department, as the Glenwood Springs Police Department (or designee) deems appropriate.
- (b) The Glenwood Springs Police Department shall have discretion to consider previous compliance check history or prior violations of a Licensee in determining how frequently to conduct compliance checks of the Licensee with respect to individual Licensees.

- (c) The Glenwood Springs Police Department shall inspect each Tobacco Product Retailer at least two (2) times per twelve (12) month period. Nothing in this paragraph shall create a right of action in any Licensee or other Person against the City or its agents.
- (d) Compliance checks shall be conducted as the Glenwood Springs Police Department deems appropriate, including the use of decoys, so as to allow the Glenwood Springs Police Department to determine, at a minimum, if the Tobacco Product Retailer is conducting business in a manner that complies with laws regulating access to Tobacco Products. When the Glenwood Springs Police Department deems appropriate, the compliance checks shall determine compliance with other laws applicable to Tobacco Products.

050.110.130. Suspension or Revocation of License.

- (a) The following shall be grounds for suspension or revocation of the Licensee's License:
  - (1) A violation by a Licensee or Licensee's officers, agents, or employees of any of the provisions of this Article, or any laws of the United States, the State of Colorado or ordinances of the City relating to the sale or furnishing of Tobacco Products or Cigarettes to minors, or the storage or display of Cigarettes or Tobacco Products.
  - (2) Violations of any conditions imposed by the Licensing Administrator or Hearing Officer in connection with the issuance or renewal of a License.
  - (3) Failure to pay State or local taxes that are related to the operation of the business associated with the License.
  - (4) Loss of right to possession of the licensed premises.
  - (5) Fraud, misrepresentation, or a false statement of material fact contained in the original or renewal license application;
- (b) The City Manager shall appoint a Hearing Officer to hear all actions relating to the suspension or revocation of Licenses pursuant to this Article. The Hearing Officer shall have the authority to suspend, revoke, or impose remedial sanctions for violations.
- (c) The Licensing Administrator shall commence suspension or revocation proceedings by petitioning the Hearings Officer to issue an order to the Licensee to show cause why the Licensee's License(s) should not be suspended or revoked. The Hearing Officer shall issue such an order to show cause if the petition demonstrates that probable cause exists to determine that one or more grounds exist pursuant to subsection (a) to suspend or revoke the Licensee's License. The order to show cause shall set the matter for a public hearing before the Hearing Officer.
- (d) Notice of the order to show cause order and hearing date shall be mailed to Licensee by regular mail, postage prepaid, at the address shown on the License no later than thirty (30) days prior to the hearing date. Notice is deemed to have been properly given upon mailing.
- (e) In determining whether a License should be suspended or revoked, and in determining whether to impose conditions in the event of a suspension, the Hearing Officer shall consider the following factors:
  - (1) The nature and circumstances of the violation;
  - (2) Corrective action, if any taken by the Licensee;

- (3) Prior violations, if any by the Licensee;
- (4) The likelihood of recurrence of the violation;
- (5) Whether the violation was willful; and
- (6) Previous sanctions, if any, imposed on the Licensee.

050.110.140. Penalty.

It shall be unlawful for any person or business to violate a provision of this Article.

Violators shall be subject to the penalties provided in Section 010.020.080 of this Code and may be subject to any civil remedies available. A separate offense shall be deemed committed upon each day such business or person is in violation of this article.

050.110.150 - Effective date.

This Article shall become effective as of January 1, 2020 and enforceable on and after that date. Any Tobacco Product Retailer without a License after the effective date will be in violation of this Article.

## Exhibit B

New language is double underlined

~~Strike-through language is deleted~~

120.030.092 - Possession of tobacco products by minor underage persons and furnishing or selling cigarettes or tobacco products to minors underage persons prohibited.

- (a) ~~Except as provided in Subsection (f) below, a~~Any person who knowingly furnishes to any person who is under twenty-one (21) ~~eighteen (18)~~ years of age, by gift, sale or any other means, any cigarettes or tobacco products, commits a misdemeanor; and, upon conviction thereof, shall be punished as set forth in Section 010.020.080. It shall be an affirmative defense to a prosecution under this section that the person furnishing the tobacco product was presented and reasonably relied upon a document which identified the person receiving the tobacco product as being twenty-one (21) ~~eighteen (18)~~ years of age or older.
- (b) Any person who is under twenty-one (21) ~~eighteen (18)~~ years of age and who possesses, purchases, ~~or acquires, or attempts to purchase~~ any cigarettes or tobacco products commits a misdemeanor; and, upon conviction thereof, shall be punished as set forth in Section 010.020.080, or the court shall allow such person to perform community service and be granted credit against the fine and court costs.
- (c) For purposes of this section, the term tobacco product has the same meaning as set forth in section 050.110.020, ~~means any product that contains nicotine or tobacco or is derived from tobacco and is intended to be ingested or inhaled by or applied to the skin of an individual or any electronic device that can be used to deliver nicotine to the person inhaling from the device, including but not limited to an electronic cigarette, cigars, cigarillo or pipe.~~
- (d) Any person who sells or offers to sell any cigarettes or tobacco products, as defined above, over the counter or by use of a vending machine or other coin-operated machine commits a misdemeanor; and, upon conviction thereof, shall be punished as set forth in Section 010.020.080; except that ~~cigarettes~~ tobacco products may be sold at retail as permitted by Title 050, Article 120 of this Code ~~through vending machines only in:~~
  - (1) ~~Factories, businesses, offices or other places not open to the general public;~~
  - (2) ~~Places to which persons under the age of eighteen (18) years are not permitted access; or~~
  - (3) ~~Places where the vending machine is under the direct supervision of the owner of the establishment or an adult employee of the owner, including but not limited to, establishments holding a valid liquor license issued pursuant to C.R.S. Article 47 of Title 12. As used in this section, under direct supervision means the vending machine shall be in plain vision of the employee or owner during regular business hours.~~

~~It shall be an affirmative defense to a prosecution under this subsection that the person selling or offering to sell the tobacco product was presented with and reasonably relied upon a document which identified the person purchasing the tobacco product as being eighteen (18) years of age or older.~~

- (e) ~~Any person who sells or offers to sell any cigarettes or tobacco products shall display a warning sign as specified in this subsection. Any person who fails to display said warning sign commits a misdemeanor and, upon conviction thereof, shall be punished as set forth in Section 010.020.080. Said warning sign shall be displayed in a prominent place in the building and on such machine at all times and shall have a minimum height of three (3) inches and a width of six (6) inches, and shall read as follows:~~

~~WARNING  
IT IS ILLEGAL FOR ANY PERSON UNDER  
EIGHTEEN YEARS OF AGE TO PURCHASE  
CIGARETTES AND TOBACCO PRODUCTS  
AND, UPON CONVICTION, A FINE  
MAY BE IMPOSED.~~

~~Any violation of the provisions of this subsection shall not constitute a violation of any other provisions of this section.~~

- (f) ~~It shall be an affirmative defense to the offense described in Subsection (b) above that the cigarettes or tobacco products were possessed or consumed by a person under eighteen (18) years of age under the following circumstances:~~
- (1) ~~While such person was legally upon private property with the knowledge and consent of the owner or legal possessor of such private property and the cigarettes or tobacco products were possessed with the consent of his/her parent or legal guardian who was present during such possession.~~
- (2) ~~For purposes of this subsection, private property shall mean any dwelling and its curtilage which is being used by a natural person or natural persons for habitation and which is not open to the public and privately real property which is not open to the public. Private property shall not include:~~
- a. ~~Any establishment which sells cigarettes or tobacco products or upon which cigarettes or tobacco products are sold; or~~
- b. ~~Any establishment which leases, rents or provides accommodations to members of the public generally.~~

**ORDINANCE NO. 26**

Series of 2019

**AN ORDINANCE OF THE CITY OF GLENWOOD SPRINGS, COLORADO, AMENDING TITLE 050 OF THE GLENWOOD SPRINGS MUNICIPAL CODE TO PERMIT PERSONS EIGHTEEN YEARS OF AGE AND OLDER TO HANDLE TOBACCO PRODUCTS IN THE COURSE OF EMPLOYMENT.**

**WHEREAS**, the City of Glenwood Springs (“Glenwood Springs” or the “City”) is a home-rule municipality organized under Article XX of the Colorado Constitution and with the authority of the Glenwood Springs Home Rule Charter; and

**WHEREAS**, by Ordinance No. 21, Series 2019 the City Council raised the minimum legal age to purchase and possess tobacco products from eighteen to twenty-one; and

**WHEREAS**, the Colorado State Liquor Code, C.R.S. § 44-3-901 and 1 C.C.R 203-2 permits employees older than eighteen and under the age of twenty-one to hold employment in most liquor-licensed establishments; and

**WHEREAS**, in order to remove conflicting barriers to employment, the City wishes to conform its tobacco licensing code with the state liquor code as it relates to age of individuals employed in licensed establishments; and

**WHEREAS**, City Council finds and declares that the amendment to the Municipal Code regarding the age of individuals employed in tobacco licensed retailers is proper in light of the needs and desires of the City and in the promotion of the public health, safety and welfare of the City’s residents and visitors.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENWOOD SPRINGS, COLORADO, ORDAINS:**

**Section 1.** The foregoing recitals are incorporated herein as if set forth in full.

**Section 2.** Section 010.110.050 of the Municipal Code is hereby amended as follows, with double underlined text added and strike through language deleted:

050.110.050. - Conditions of the Tobacco Product Retail License.

\*\*\*

(d) Minimum age for persons handling Tobacco Products. No Person who is younger than the Minimum Legal Sales Age eighteen (18) years of age shall, while employed at a

Tobacco Product Retail Location, sell, stock, retrieve, or otherwise handle Tobacco Products or Tobacco Paraphernalia.

\*\*\*

**Section 3.** The Code amendment contained herein shall become effective in accordance with the City Charter ten days after publication.

**RESOLUTION 2019 - 34**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY  
OF GLENWOOD SPRINGS, COLORADO, ADOPTING A  
FEE FOR A TOBACCO PRODUCT RETAIL LICENSE.**

**WHEREAS**, tobacco use remains one of the greatest public health challenges in the United States where almost 500,000 Americans still die prematurely each year from diseases related to cigarette smoking, comprising 85 percent of lung cancer deaths, which in Colorado is the number one cause of preventable death and accounts for 5,100 deaths per year; and

**WHEREAS**, on August 15, 2019 through Ordinance 21, Series of 2019, City Council established licensing requirements for the retail sale of tobacco products; and

**WHEREAS**, City Council has amended to the Municipal Code regarding the tobacco retail licensing requirements in light of the needs and desires of the City and in the promotion of the public health, safety and welfare of the City's residents and visitors; and

**WHEREAS**, City Council now wishes to establish a fee for licenses for the retail sale of tobacco products in the City of Glenwood Springs.

**NOW, THEREFORE, IT IS RESOLVED BY THE CITY COUNCIL OF THE CITY  
OF GLENWOOD SPRINGS, COLORADO, THAT:**

**Section 1.** The above recitals are hereby incorporated as findings by the City Council of the City of Glenwood Springs.

**Section 2.** The City Council of the City of Glenwood Springs finds that all license applications shall be accompanied by the payment in full of a licensing fee of one thousand dollars (\$1,000).

| <b>Department:</b>           | City Administration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Presented By:</b>         | Steve Boyd, Karl Hanlon                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Strategic Goals:</b>      | Protect and Preserve our Quality of Life                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Background Info:</b>      | Rocky Mountain Industrials operates a relatively small mining operation next to town. While the City is not opposed to that continuing, its ongoing efforts to greatly increase the area impacted and amount of product mined is a continuing threat to the quality of life of our residents. While the City is fortunate to have the strong support of nearly every regional resident, agency and elected official, the company's persistence is forcing us to maintain this battle as our highest City priority. |
| <b>Issues:</b>               | We have reason to believe that this company will appeal recent judicial rulings that impair or eliminate their ability to pull hundreds of thousands of tons of gravel from Iron Mountain, which is widely and passionately opposed by City residents.                                                                                                                                                                                                                                                             |
| <b>Fiscal Impact:</b>        | The requested appropriation for legal and related fees in 2025 is \$1,000,000 to the MINE OPPOSITION line item in the General Fund. This is to directly confront legal potential legal challenges by hiring specialized legal and lobbying firms to represent our interests. The funds come from the Available Reserve, we will continue to carry the existing \$1,000,000 reserve to oppose this expansion also.                                                                                                  |
| <b>Legal Review:</b>         | NA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Staff Recommendation:</b> | Staff believes we need to expend whatever resources are necessary to prevent the proposed expansion of the mine in our City.                                                                                                                                                                                                                                                                                                                                                                                       |

**ORDINANCE NO. 05**

Series of 2025

**AN ORDINANCE OF THE CITY OF GLENWOOD SPRINGS,  
COLORADO, AMENDING THE 2025 APPROPRIATION ORDINANCE  
TO REFLECT CARRYOVERS FROM THE 2024 BUDGET,  
REALLOCATION OF FUNDS, AND EXPENDITURES APPROVED  
AFTER SUBMISSION OF THE 2025 BUDGET.**

INTRODUCED, READ, PASSED, AND ORDERED PUBLISHED BY TITLE ONLY  
THIS 6<sup>th</sup> DAY OF FEBRUARY, 2025.

CITY OF GLENWOOD SPRINGS, COLORADO

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Planning File 21-24; Roaring Fork Transportation Authority 1041 Review

**Action Requested:** Consideration of approval of a 1041 Review for the Roaring Fork Transit Authority (RFTA) to construct a new transit center.

**Department:** Economic and Community Development

**Presented By:** Watkins Fulk-Gray

**Strategic Goals:** Generate Sustainable Economic Development  
Preserve and Improve Infrastructure

**Background Info:** This project involves the construction of a new, expanded transit center, a new administration building, and a new maintenance building that is proposed on RFTA-owned parcels in the immediate vicinity of existing RFTA buildings. These three elements are referred to by RFTA as Phase 6A (the transit center), Phase 6B (the administration building), and Phase 8 (the maintenance building). The administration building and maintenance building were part of the Location & Extent application and were approved unanimously by the Planning and Zoning Commission (P&Z) on January 28th. Phase 6A, the new and expanded transit center, is subject to 1041 Review by City Council. The new transit center will be a significant upgrade from the current transit stop, and will include nine bus bays, overhead electric bus chargers, a building serving as a rider shelter and other uses, and expanded parking. Together with RFTA's other facilities nearby, this will help establish Glenwood as RFTA's operations.

Process

The interlocking of approval processes and of overlapping sets of regulations is a notable feature of this project. The approval process for the transit center is broken down by "essential elements" of the transit center and "non-essential elements." The essential elements of the transit center use, such as the station platform and nearby intersections, are subject to approval by City Council using Article 070.080, Guidelines and Regulations for Matters of State Interest. "Non-essential" elements of the transit center project like landscaping and parking lot design, which do not substantially impact the 1041 criteria analysis, are approved by P&Z through Location & Extent Review, using standards from the Glenwood Meadows Zoning and Development Plan (GMZDP) (except for instances on which the GMZDP is silent, in which case the City's typical code standards apply). The standards City Council must use to approve the 1041 Review will be discussed below in the section "1041 Criteria."

As stated already, the P&Z approved the administration building, maintenance building, and the "non-essential" elements of the transit center by approving the Location & Extent Review. The standards P&Z used to review the non-essential elements of the transit center, the administration building, and the maintenance building are the City's typical code standards, except that subsection 070.040.020, Sensitive Area Protection standards, replaces many of the usual design standards due to the project being in a mapped geohazard zone.

Planning and Zoning Commission

The P&Z considered the 1041 Review and Location & Extent Review on December 17th. At that meeting questions arose regarding the Glenwood Meadows Annexation and Development Agreement applicability and timelines. Staff also flagged that the traffic study provided by the applicant needed updating. The P&Z therefore continued the item to its January 28th meeting. In the intervening time between the December and January P&Z meetings, the traffic report was updated and accepted by Staff and the questions about the Annexation and Development Agreement resolved.

The P&Z's discussions about both 1041 Review and Location & Extent Review mostly related to parking lot lighting, parking lot landscaping, the improvement of Wulfsohn Road, and intersection improvements to the Wulfsohn/Midland intersection. As shown by their unanimous recommendation, P&Z ultimately was satisfied that the lighting levels will be adjusted appropriately, additional parking lot landscaping is not feasible given the

soil conditions, Wulfsohn Road will be appropriately reconstructed where it is torn up, and that the intersection contribution requirement is adequate.

The approved minutes from the December 17th P&Z meeting and the draft minutes for the January 28th meeting are attached to the packet, along with a complete analysis of both the 1041 Review and Location & Extent Review in the December 17th staff packet. The January 28th staff memo mostly contains updates about questions and issues that came up on December 17th.

#### 1041 Criteria

1041 Reviews involve 19 review criteria found in Article 070.080, along with three criteria specific to "key facilities." Each of the 22 review criteria are reproduced below, and inset with **bold** text is Staff's analysis of how the project fits the criteria.

1. The health, welfare, and safety of the residents of this City will be protected and served.

**Staff believes that with the included conditions of approval, the proposed transit center development will serve and improve the health, safety, and welfare of residents.**

2. The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.

**The proposed transit center is in general conformity with the Comprehensive Plan, supporting goals, policies, and actions such as:**

- a. **Promote transit-oriented development**
- b. **Expand local transit and enhance regional transit to, from, and through Glenwood Springs**
- c. **Support the expansion of green transportation options**
- d. **Plan for transit stations located in all mixed-use neighborhoods by incorporating principles of smart growth, new urbanism and green building**
- e. **Concentrate growth in Glenwood Springs in locations that can be served by high-frequency transit**

3. The project is financially feasible. The determination of financial feasibility of the project may include but is not limited to the following considerations:

- a. The business plan submitted by the applicant.
- b. Relevant bond issue, loan and other financing approval or certifications (ex: approved bond issue; bond counsel opinion).

**The applicant organization, RFTA, has provided evidence that they have a diverse and substantial set of funding sources to make the project feasible.**

4. The project is not subject to significant risk from natural hazards. The determination of risk from natural hazards to the project may include but is not limited to the following considerations:
  - a. Faults and fissures.
  - b. Unstable slopes including landslides, rock slides, and avalanche areas.
  - c. Expansive or evaporative soils and risk of subsidence.
  - d. Wildfire hazard areas.
  - e. Floodplains.

**Geohazards—hydrocompactive soils and debris fan—do exist on this site, according to the City's geohazard mapping. The past ten years have shown that it is possible to build in the challenging geology of Glenwood Meadows, but also that buildings will fail when the conditions are not properly taken into account. Two**

**recommendations for designing the foundations are made in the geotechnical report. Conditions of approval have been recommended to ensure safety and full mitigation from geologic hazards.**

5. The project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems. The determination of the effects on local government services and infrastructure may include but is not limited to the following considerations:
  - a. Current and projected capacity of roads, schools, infrastructure, drainage and/or stormwater infrastructure, housing, recreational facilities, emergency services, and other services necessary to accommodate development, and the impact of the project upon the current and projected capacity.
  - b. Changes caused by the project in the cost of providing education, transportation networks, water treatment and wastewater treatment, stormwater drainage, channel stabilization, recreation facilities, bridges, emergency services, or other governmental services or facilities.
  - c. Need for temporary roads to access the project for construction and maintenance.
  - d. Change in demand for public transportation.

**The project does challenge the City's electric and road infrastructures. The proposed bus and car chargers, in particular, take significant capacity from the existing substation and transformers serving the area. Ultimately, without infrastructure upgrades with the project as proposed, the City would lose redundancy that has been planned for Glenwood's grid system. However, there are infrastructure upgrades that will allow the project to proceed as proposed without detriment to the City's grid. A condition of approval has been recommended that will establish a separate process for the Electric Department to take stock of its needs and to engage with RFTA in a fair cost-sharing agreement.**

**The traffic impact study provided by the applicants makes clear that there will be significant impacts to the road system from the additional traffic the project will generate, particularly to the western Wulfsohn Road/Midland Avenue intersection, the Devereux/Midland intersection, the roundabouts at I-70's exit 114, and the 9<sup>th</sup>/Grand intersection. A closer reading of the traffic impact study reveals, in the opinion of the City's Engineering and Public Works departments, that the provided traffic impact study has flaws that need correcting, which include not providing analysis for three intersections that are important to consider and discrepancies with the traffic counts. The City's Engineering Department has determined that a roundabout is the preferred option to enhance the Wulfsohn/Midland intersection functionality and has already engaged in preliminary designs for a roundabout at this intersection. This project makes the need for intersection improvements acute. A condition of approval has been recommended requiring RFTA update its traffic impact study and pay a share of the construction costs of the roundabout.**

6. The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience. The determination of effects of the project on recreational opportunities and experience may include but is not limited to the following considerations:
  - a. Changes to existing and projected visitor days.
  - b. Changes in quality and quantity of fisheries.
  - c. Changes in instream flows or reservoir levels.
  - d. Changes in access to recreational resources.
  - e. Changes to quality and quantity of hiking, biking, or horseback riding trails.
  - f. Changes to hunting experiences.
  - g. Changes to open space.
  - h. Changes to existing conservation easements.
  - i. Changes to regional or neighborhood parks.
  - j. Changes to recreational scenic experience.

**It is possible that the project will promote greater access to the Wulfsohn-area and Red Mountain trails through increased bus service to the site, which is located near the Wulfsohn trails. It is not believed that construction activities will interfere with trail users.**

7. The project will not significantly degrade air quality. The determination of effects of the project on air quality may include but is not limited to the following considerations:
  - a. Changes in visibility and microclimates.
  - b. Applicable air quality standards.

**The project will enable more bus traffic, but the project also programs additional electrification of RFTA's bus system. Moreover, bus traffic, by its nature, is intended to reduce overall air pollution through removing more polluting vehicles from the roadways. It is believed that the proposal will not degrade air quality.**

8. The project will not significantly degrade existing visual quality. The determination of visual effects of the project may include but is not limited to the following considerations:
  - a. Visual changes to ground cover and vegetation, waterfalls and streams, or other natural features.
  - c. Interference with viewsheds and scenic vistas.
  - d. Changes in landscape character types of unique land formations.
  - e. Compatibility of structure size and color with scenic vistas and view sheds.
  - f. Changes to open space.
  - g. Changes to existing conservation easements.
  - h. Changes to impacts to regional or neighborhood parks.

**The project will not significantly degrade the site's aesthetic qualities because the site is already developed and is surrounded by existing development.**

9. The project will not significantly degrade surface water quality. The determination of effects of the project on surface water quality may include, but is not limited to, the following considerations:
  - a. Changes to existing water quality, including patterns of water circulation, temperature, conditions of the substrate, extent and persistence of suspended particulates and clarity, odor, color or taste of water.
  - b. Applicable narrative and numeric water quality standards.
  - c. Changes in point and nonpoint source pollution loads.
  - d. Increase in erosion.
  - e. Changes in sediment loading to waterbodies.
  - f. Changes in stream channel or shoreline stability.
  - g. Changes in stormwater runoff flows.
  - h. Changes in trophic status or in eutrophication rates in lakes and reservoirs.
  - i. Changes in the capacity or functioning of streams, lakes, or reservoirs.
  - j. Changes to the topography, natural drainage patterns, soil morphology and productivity, soil erosion potential, and floodplains.
  - k. Changes to stream sedimentation, geomorphology, and channel stability.

**Surface water runoff is designed to be captured through piping and underground chamber systems after being filtered through native and drought-resistant landscaping. The drainage report and stormwater plans need to be revised so as to consider the impact on the culvert underneath Midland Avenue and not overload it, causing it to fail. This has been recommended as a condition of approval.**

10. The project will not significantly degrade groundwater quality. The determination of effects of the project on groundwater quality may include, but is not limited to, the following considerations:
  - a. Changes in aquifer recharge rates, groundwater levels and aquifer capacity including seepage losses through aquifer boundaries and at aquifer-stream interfaces.
  - b. Changes in capacity and function of wells within the impact area.
  - c. Changes in quality of well water within the impact area.

**Groundwater quality will be protected by using the same practices as protecting surface water quality, including properly sized piping and conveyances, in addition to erosion prevention measures that will be required by building or grading permits.**

11. The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.

**No large-scale wetland or riparian areas exist in the project's vicinity.**

12. The project will not significantly deteriorate soils and geologic conditions. The determination of effects of the project on soils and geologic conditions may include but is not limited to the following considerations:
- a. Loss of topsoil due to wind or water forces.
  - b. Changes in soil erodibility.
  - c. Physical or chemical soil deterioration.
  - d. Terrain deformation/mass wasting/subsidence.
  - e. Compacting, sealing and crusting.
  - f. Waterlogging.
  - g. Soil morphology and productivity.

**To avoid unwanted soil and geologic conditions such as erosion and soil compaction, all recommendations from the project's geotechnical experts must be followed and the geotechnical report must support all stormwater, civil, and structural designs. Conditions of approval have been recommended ensuring that this happens.**

13. The project will not cause a nuisance. The determination of nuisance effects of the project may include, but is not limited to, the following considerations: Increase in odors, dust, fumes, glare, heat, noise, vibration or artificial light.

**Potential sources of nuisances for this project after buildout would include lighting and noise from buses. The exterior lighting standards should mitigate this situation. Noise from buses will likely exist, though the site already experiences bus traffic at the existing transit stop. It is not anticipated that noise from buses will excessively contribute to a nuisance situation, given that the nearest residential development is approximately a quarter mile away.**

14. The project will not result in an unreasonable risk of releases of hazardous materials. The determination of the risk of release of hazardous materials caused by project may include but is not limited to the following considerations:
- a. Plans for compliance with federal and state handling, storage, disposal, and transportation requirements.
  - b. Use of waste minimization techniques.
  - c. Adequacy of spill prevention and response plans.

**No risk from hazardous material releases is anticipated.**

15. Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas. The determination of potential for pollution of the aquifer recharge areas by the project may include but is not limited to the following considerations:
- a. Proximity of urban development and population densities to aquifer recharge areas.
  - b. Proximity of stormwater and sanitation systems to aquifer recharge areas.

- c. Changes in water quality in the aquifer recharge areas.

**There are no known impacts to aquifer recharge zones.**

- 16. The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements. The determination of whether the project is reasonably necessary may include but is not limited to the following considerations:
  - a. Relationship to reasonable growth projections and local land use plans.
  - b. Relationship to other providers' service areas.
  - c. Whether the project is not in compliance with regulatory or technological requirements or will not be in compliance in the near future.

**The project represents an expansion of RFTA's transit service and commitment to mass transit. The transit center will expand to nine bus bays, include bus charging infrastructure, include more amenities to riders, and include significantly more parking. A significant portion of Glenwood Springs's workforce commutes from outside the city, and vehicle traffic is a primary concern within the city. This project has the potential to reduce traffic and give commuters greater opportunities to take mass transit.**

- 17. The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities, including the following considerations:
  - a. Site selection and construction will not create or encourage growth and development which is incompatible with and cannot be accommodate by the local financial capacity of the area or residents to be served.
  - b. New systems will not overburden existing systems and current and future demand for services can be met within existing and proposed capacity.
  - c. The project will not create proliferation of special districts or overlapping of special districts with the boundaries of other special districts or municipalities.
  - d. The project is the best alternative for the provision of services to the geographical area serviced.
  - e. To the extent feasible, facilities and systems shall be consolidated with existing facilities and systems in the area.
  - f. The project will not result in duplicative services or excessive capacity.
  - g. The project will be administered so as to minimize disruption of utility services and preserve desirable existing community patterns.

**As discussed in the criterium addressing service delivery capacity, the project does represent challenges to both the road system and electric infrastructure. The site location is ideal for the expansion of transit services, but conditions of approval and separate agreements will be necessary for cost sharing of upgrades that will be needed to the road and electric systems.**

- 18. Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.

**The site has previously been used for governmental entities, so no economic detriment is anticipated with the proposal.**

- 19. The project shall emphasize the most efficient use of water, including the recycling, reuse, and conservation of water, including the following considerations:
  - a. Whether the project uses readily available conservation techniques.
  - b. Whether the project recycles water to the greatest extent permissible.
  - c. Whether the project will use raw water for exterior or irrigation use if available.

The applicant team has identified that they will be using water efficient toilets and plumbing fixtures and will be using raw water for all irrigation. However, it is unclear if it will be possible to transport the raw water to the transit center site. The City's past experience with irrigation lines running underneath streets in Glenwood Meadows, as the applicants propose underneath Wulfsohn, has shown that this is a bad long-term idea and leads to street failures. A condition of approval has been recommended for the applicant to revise the plans removing the irrigation piping beneath Wulfsohn.

#### **Review Criteria Specific to Areas Around Key Facilities**

"Key facilities" are facilities related to transportation and utilities, and by definition includes mass transit stations. Article 070.080 requires the following three criteria for key facilities such as the proposed transit center:

1. The project will encourage the smooth flow of motorized and nonmotorized traffic.
2. The project will foster the development of such areas in a manner calculated to preserve the smooth flow of such traffic.
3. The project will preserve desirable existing community patterns.

**City Staff believes the project's design will have a satisfactory traffic flow internally, but without changes to the nearby Wulfsohn/Midland intersection, there will not be a smooth or safe traffic flow. City Staff has identified that a roundabout is the preferred solution to upgrade this intersection. Because RFTA will be contributing to the undesirable and unsafe condition of this intersection, the City has requested in a condition of approval that they pay a portion of the construction cost of a roundabout.**

#### **Issues:**

An important focus of this project from the City's perspective is how the project will affect the City's road systems, and particularly the Wulfsohn/Midland intersection in close proximity to the transit center. This intersection had already been flagged for needing improvements, and the Engineering Department established prior to RFTA's submitting their application that a roundabout is the preferred alternative to improve safety and the functioning of this intersection. RFTA's updated traffic report established the traffic volume increase at this intersection, and a condition of approval has been recommended that sets RFTA's required contribution toward the roundabout construction based on the traffic report.

The proposed transit center meets the Comprehensive Plan and most code requirements. As discussed previously, many elements of the transit center plan, such as parking lot design and landscaping, fall under the purview of Location & Extent Review that was approved by P&Z. For approval of the 1041 Review, Staff recommends the conditions of approval listed below. These conditions are the same as those recommended by P&Z, except as noted at the end of the list.

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.
4. At the time of Final Plans Review submission, the plans shall be revised to include the following changes:
  - a. The sidewalk along Wulfsohn Rd. adjacent to the transit center parcel shall be eight feet in width.
  - b. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
  - c. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.

5. Prior to submitting a building and/or grading permit application, the owner shall:
  - a. Submit and receive approval of a Final Plans application in accordance with Municipal Code section 070.060.050(c).
  - b. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
  - c. Enter into a Development Agreement that memorializes the development approvals.
  - d. Provide all other permits from outside jurisdictions necessary for the project.
6. Prior to issuance of the building permit, the applicant shall:
  - a. Obtain Right-of-Way Encroachment Licenses for all private uses or structures to be located within the right-of-way.
7. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.
8. RFTA shall contribute \$100,800 toward the construction of a roundabout at the west Wulfsohn/Midland intersection. These funds will be appropriated in 2025 and held in reserve by the City for a period of five years, ending March 1, 2030. Prior to March 1, 2030, the City shall have the option to extend the five-year period in writing for another five-year period which will end on March 1, 2035. Nothing shall prohibit RFTA and the City from extending the timeframe in mutual agreement beyond the 10-year timeframe prior to March 1, 2035. RFTA shall not be obligated to pay its contribution if the transit center is not constructed.
9. RFTA shall request can and will serve letters for electric service for any electric load beyond what is required to service the development as submitted in the plans. These elements included in the plans include all items on the Glenwood Springs Electric Department estimate titled "RFTA 6A & 6B" dated January 15, 2025, and included with the February 6, 2025 staff report packet. All items noted as "future" in the plans, such as future electric bus chargers, shall be subject to review by the Electric Department.
10. All repairs, encroachments and replacements to Wulfsohn Road associated with the transit center construction shall be replaced with road cross sections meeting City standards. These cross section designs, as may be amended, are shown in "Glenwood Meadows City Standard Roadway Details" along with the general locations of roadway replacement areas.
11. The applicant shall comply with and address all City referral comments prior to the issuance of a grading permit or building permit.

The conditions of approval recommended by P&Z are the same as those presented here except for these conditions:

*8. RFTA will contribute \$100,800 toward the construction of a roundabout at the west Wulfsohn/Midland intersection. These funds will be appropriated in 2025 and held in reserve by the City for a period of five years, ending March 1, 2030. Prior to March 1, 2030, the City shall have the option to extend the five-year period in writing for another five-year period which will end on March 1, 2035. Nothing shall prohibit RFTA and the City from extending the timeframe in mutual agreement beyond the 10-year timeframe prior to March 1, 2035. RFTA shall not be obligated to pay its contribution if the transit center is not constructed.*

*10. All repairs, encroachments and replacements to Wulfsohn Road associated with the transit center construction shall be replaced with road cross sections meeting City standards. These cross section designs, **as may be amended**, are shown in "Glenwood Meadows City Standard Roadway Details" along with the general locations of roadway replacement areas.*

P&Z's recommended condition #8 was replaced by this one because of negotiations between City staff and RFTA staff. The dollar amount \$100,800 is based upon an estimated cost of \$6 million for the roundabout and a proportional contribution of 1.68% identified in the traffic report as the traffic increase at this intersection resulting from the transit center project. The change shown in bold and underlined in condition #10 is recommended to allow adjustments to the technical specifications while the geotechnical report from which they are based is being updated.

**Fiscal Impact:** RFTA's projects will precipitate a need for intersection improvements at the Midland/Wulfsohn intersection, for which the Engineering Department has stated its preference of a roundabout. It is estimated that the roundabout will cost Glenwood \$6 million to construct. A recommended condition of approval establishes a contribution from RFTA for the roundabout, but this contribution is only based on the estimated traffic volume increase from the transit center, not from the administration building. The traffic report estimates the administration building will increase traffic volume 5.9% at the intersection.

The City has tried to minimize fiscal impacts to its roadways from the project by recommending a condition of approval requiring RFTA to "beef up" the roadway sections that will be subject to the harsh impacts of heavy buses turning and stopping near the transit center.

**Legal Review:** Legal has reviewed the conditions of approval and has been involved with RFTA discussions leading up to the P&Z meetings.

**Staff Recommendation:** Approve the proposed transit center with conditions of approval as proposed.

# Planning File #21-24 1041 Review and Location & Extent

|                       |                                                                                                                                          |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| REQUEST               | 1) 1041 Review for an expanded transit center and 2) Location & Extent Review for a new administration building and maintenance building |
| APPLICANT             | DHM                                                                                                                                      |
| OWNER                 | RFTA (Roaring Fork Transportation Authority)                                                                                             |
| ZONE                  | M <sub>1</sub> , I <sub>1</sub>                                                                                                          |
| LOCATION:             | 2307 and 2302 Wulfsohn Rd                                                                                                                |
| SURROUNDING LAND USES | North: Right-of-Way Corridor<br>South: Parkland/Open Space<br>East: Vacant<br>West: Vacant                                               |
| LOT SIZE              | 12.65 acres (per Assessor's records)                                                                                                     |

# History and Existing Conditions

## Planning & Zoning Commission:

- Recommended approval of the 1041 Review with conditions

## Prior uses and development:

- Municipal Operations Center
- Glenwood Maintenance Facility
- Fuel and wash
- Office space
- Existing park and ride

# Project Summary

Applicant proposes an expanded transit center, an administration building for RFTA's operations, and a maintenance building.

# Site Vicinity

- Three land parcels: (1) maintenance building, (2) administration building, and (3) transit center

# SITE PLAN

# Site Photos

# Transit Center Site Plan

## Regulations for the transit center

- Section 070.080, Guidelines and Regulations for Matters of State Interest – applies to essential elements of transit center only
- Glenwood Meadows Zoning and Development Plan – regulations applied only to Location & Extent Review analysis (“non-essential elements”)
- “Essential elements” = improvements that substantially impact the 1041 criteria analysis
- “non-essential elements” = design elements that do not impact areas/activities of state interest

## Midland/Wulfsohn Intersection

- Traffic report identifies that this intersection needs improvements
- The transit center will contribute 1.68% traffic increase
- Roundabout is preferred option

# 1041 Review Criteria of Approval

1. The health, welfare, and safety of the residents of this City will be protected and served.
2. The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.
3. The project is financially feasible.
4. The project is not subject to significant risk from natural hazards.
5. The project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems.

# 1041 Review Criteria of Approval, cont'd

6. The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience.
7. The project will not significantly degrade air quality.
8. The project will not significantly degrade existing visual quality.
9. The project will not significantly degrade surface water quality.
10. The project will not significantly degrade groundwater quality.
11. The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.

# 1041 Review Criteria of Approval, cont'd

12. The project will not significantly deteriorate soils and geologic conditions.
13. The project will not cause a nuisance.
14. The project will not result in unreasonable risk of releases of hazardous materials.
15. Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas.
16. The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements.

# 1041 Review Criteria of Approval, cont'd

17. The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities
18. Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.
19. The project shall emphasize the most efficient use of water, including the recycling, reuse, and conservation of water

# 1041 Review Criteria of Approval, “Key Facilities”

The following criteria apply to “Key facilities:” airports, public utilities, highway arterials, rapid or mass transit terminals, stations, and fixed guideways.

1. The project will encourage the smooth flow of motorized and nonmotorized traffic.
2. The project will foster the development of such areas in a manner calculated to preserve the smooth flow of such traffic.
3. The project will preserve desirable existing community patterns.

**Staff response: Changes to the Wulfsohn/Midland intersection are necessary to meet these standards. A roundabout has been identified as the preferred alternative.**

# Consistency with Comprehensive Plan – 1041 Review

The proposed project meets the following Comprehensive Plan goals, policies, or actions:

- Promote transit-oriented development
- Expand local transit and enhance regional transit to, from, and through Glenwood Springs
- Support the expansion of green transportation options
- Plan for transit stations located in all mixed-use neighborhoods by incorporating principles of smart growth, new urbanism and green building
- Concentrate growth in Glenwood Springs in locations that can be served by high-frequency transit

# Referral Comments

## Engineering Department

Standard conditions regarding drainage. Stamped letter and on-site monitoring by geotechnical engineer during construction. Contribution requested to future roundabout.

## Public Works

Many comments to plan sets that will be incorporated at Final Plans or building permit. Requests additional information and coordination for drainage, traffic, and electrical plans.

## Fire Department

Some comments on plan sets that will be incorporated at Final Plans or building permit. Changes requested include:

- Fire hydrant in a landscaped island adjacent to admin building
- Campus-style fire alarm

# Public Comments

- None received

## Action 1:

Consideration of a 1041 Review for an expanded transit center.

## Staff Recommendation:

Staff recommends City Council approve the 1041 Review with findings and conditions from the staff report.

## Recommended Findings:

1. The health, welfare, and safety of the residents of this City will be protected and served.
2. The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.
3. The project is financially feasible.
4. The project is not subject to significant risk from natural hazards.
5. The project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems.

## 1041 Review Suggested Findings, cont'd

6. The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience.
7. The project will not significantly degrade air quality.
8. The project will not significantly degrade existing visual quality.
9. The project will not significantly degrade surface water quality.
10. The project will not significantly degrade groundwater quality.
11. The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.
12. The project will not significantly deteriorate soils and geologic conditions.
13. The project will not cause a nuisance.
14. The project will not result in unreasonable risk of releases of hazardous materials.

# 1041 Review Suggested Findings, cont'd

15. Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas.
16. The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements.
17. The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities.
18. Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.
19. The project emphasizes the most efficient use of water, including the recycling, reuse, and conservation of water.

## 1041 Review Suggested Findings, cont'd

- 20. With the Conditions of Approval proposed, the project will encourage the smooth flow of motorized and nonmotorized traffic.
- 21. With the Conditions of Approval proposed, the project will foster the development of such areas in a manner calculated to preserve the smooth flow of such traffic.
- 22. With the Conditions of Approval proposed, the project will preserve desirable existing community patterns.

## Recommended Conditions of Approval, 1041 Review:

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.

## Recommended Conditions of Approval, 1041 Review:

4. At the time of Final Plans Review submission, the plans shall be revised to include the following changes:

- a. The transit center plans shall be amended to include offsets in the retaining walls of at least 12 inches every 50 feet.
- b. The sidewalk along Wulfsohn Rd. adjacent to the transit center parcel shall be eight feet in width.
- c. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
- d. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.

## Recommended Conditions of Approval, 1041 Review:

5. Prior to submitting a building and/or grading permit application, the owner shall:
  - a. Submit and receive approval of a Final Plans application in accordance with Municipal Code section 070.060.050(c).
  - b. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
  - c. Enter into a Development Agreement that memorializes the development approvals.
  - d. Provide all other permits from outside jurisdictions necessary for the project.
  
6. Prior to issuance of the building permit, the applicant shall:
  - a. Obtain Right-of-Way Encroachment Licenses for all private uses or structures to be located within the right-of-way.

## Recommended Conditions of Approval, 1041 Review:

7. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.
8. Before commencement of roundabout construction, RFTA shall contribute funding to the actual construction cost of a roundabout at the western Midland Avenue/Wulfsohn Road intersection in a percentage amount equal to the percentage increase in traffic volume at the intersection attributable to RFTA's Phase 6A. This will be memorialized in the Development Agreement.

## Recommended Conditions of Approval, 1041 Review:

9. RFTA shall request can and will serve letters for electric service for any electric load beyond what is required to service the development as submitted in the plans. These elements included in the plans include all items on the Glenwood Springs Electric Department estimate titled "RFTA 6A & 6B" dated January 15, 2025, and included with the February 6, 2025 staff report packet. All items noted as "future" in the plans, such as future electric bus chargers, shall be subject to review by the Electric Department.
10. All repairs, encroachments and replacements to Wulfsohn Road associated with the transit center construction shall be replaced with road cross sections meeting City standards. These cross section designs, as may be amended, are shown in "Glenwood Meadows City Standard Roadway Details" along with the general locations of roadway replacement areas.

## Recommended Conditions of Approval, 1041 Review:

11. The applicant shall comply with and address all City referral comments prior to the issuance of a grading permit or building permit.

# Appendix

# Compliance with Regulations – Transit Center

| CODE STANDARD                        |                                                                                  | PROPOSED     | REQUIREMENT MET     | CODE STANDARD           |                                                                        | PROPOSED                  | REQUIREMENT MET     |

|                                      |                                                                                  |              |                     | Parking area lighting   | Must be between 0.7 and 7.0 foot-candles                               | All readings within range | YES                 |
|                                      |                                                                                  |              |                     | Light mounting heights  | 35-foot maximum                                                        | Not provided              | Needs clarification |

## Compliance with Regulations – Transit Center

- Check marks for some things, separate slides for landscaping, ROW encroachments, parking islands,
  - ☒ Height maximums
  - ☒ Building design and materials
  - ☒ Parcel-specific development standards from GMZDP
  - ☐ Landscaping
  - ☐ Parking lot design
  - ☐ ROW Encroachment License to be required

# Compliance with Regulations – Transit Center

- **Landscaping issues to fix:**
  - Increase landscaping area to 30%
  - Increase number of shrubs or show that requirements are met with existing shrubs on the site
  - Increase the percentage of species in the landscaping plan that are native and drought-resistant to at least 75%
  - Provide parking area landscaping as percentage of total parking area; if necessary, revise plans to meet these standards
  - Provide area of landscaped islands; if necessary, revise plans to include the required number of tree plantings
  - Increase street trees to meet requirements

# Compliance with Regulations – Transit Center

- **Parking islands and landscaping:** the transit center's parking design needs to be revised to incorporate more landscaped islands, per the GMZDP
  - Parking islands are required every 8 parking spaces

# Compliance with Regulations – Transit Center

- Numerous components of the transit center are shown in the right-of-way. These will require Right-of-Way Encroachment Licenses
  - We-Cycle station
  - Fences
  - Retaining walls
  - Paneling for electric charging infrastructure
  - Storm sewer
  - Bus chargers

# Compliance with Regulations – Administration and Maintenance Buildings

- **Retaining walls** - Applicants propose a terraced retaining wall that would reach 11 feet – greatly exceeding the 6-foot maximum
- **Landscaping** – Several noncompliant standards:
  - Street trees
  - Percentage native and drought-resistant
  - Perennial plantings
  - Shrub plantings
  - Parking area landscaping

# Compliance with Regulations – Administration and Maintenance Buildings

- **Building height** – maximum height is 40', with the following allowed exceptions:
  - Parapet walls – may exceed limit by 2.5'
  - Elevator tower – may exceed limit by 10'
  - Rooftop mechanical equipment – may exceed by 5'
- **Proposed height: 48'8"**

## Planning and Zoning Commission Report

Date: January 28, 2025  
To: Planning and Zoning Commission  
From: Watkins Fulk-Gray, Senior Planner, AICP  
Subject: Planning File #21-24, Matters of State Interest 1041 Permit Application, and Location and Extent for Roaring Fork Transportation Authority

|                       |                                                                                                                                               |

### **ACTION ITEMS**

**Action 1 – 1041 Review** – to consider recommendation of approval of a 1041 Review for construction of a new 9-bay transit center with a 3,232-square foot building.

**Staff recommendation:** *Staff recommends **approval** of the 1041 Review with the findings and conditions at the end of this report.*

**Action 2 – Location & Extent Review** – to consider approval of a Location & Extent Review for construction of a new 29,185-square foot administration building and a 2,720-square foot maintenance building.

**Staff recommendation:** *Staff recommends **approval** of the Location & Extent Review with the findings and conditions at the end of this report.*

Background and purpose for memo:

At the Planning & Zoning Commission's December 17 meeting, the P&Z continued both the 1041 Review and Location & Extent Review action items. Since then Staff has gained more clarity about three key issues discussed on December 17<sup>th</sup>: the traffic report, the requirement for the applicant to contribute toward roundabout construction, and about upgrades to the City's electrical infrastructure.

After review by the City's legal counsel, the City believes that nothing in the Annexation and Development Agreement prevents it from requiring contribution to the roundabout. At the December 17<sup>th</sup> meeting, the applicant requested removal of this condition of approval and argued that the Agreement absolves them from having to make transportation-related improvements. With this question resolved, the City has included a condition of approval for roundabout contribution, discussed below.

The City asked RFTA to revise its traffic report after it was discovered that the traffic report included some land use components that RFTA is not proposing at this time. The revised traffic reports for all three phases have been received, and although they recommend modifications to the existing turn lanes, the City has opted to program a roundabout at the Midland/Wulfsohn intersection. Based on the traffic report's findings, Staff is recommending a condition of approval that RFTA be required to contribute a percentage of the roundabout construction equal to the percentage of traffic volume increase at the Wulfsohn/Midland intersection after the new transit center is completed.

After receiving analysis from the City's electrical consultants, the City believes it can accommodate RFTA's proposed new load in Phases 6A, 6B, and 8 without infrastructure upgrades. A condition of approval has been recommended that will require RFTA to contribute toward electric infrastructure upgrades beyond what will be needed to service the project as it is laid out in the plans, which means that the two "future" bus chargers shown on the plans will need to be negotiated with the City. The improvements necessary to service the project as described in the plans are listed in an attachment to this packet. The attachment is a Glenwood Springs Electric Department estimate titled "RFTA 6A & 6B" and dated January 15, 2025, and also includes Phase 8.

Staff would like to provide a clarification for how the two action items, Location & Extent Review and 1041 Review, interact with each other. For simplicity the two projects were presented on December 17<sup>th</sup> geographically: Location & Extent applying to the administration building and maintenance building (Phase 6B and Phase 8) and the 1041 Review as the transit center (Phase 6A). Staff would like to clarify that the Location & Extent Review also applies to the transit center phase, including some of the design elements not pertinent to 1041 Review. Staff calls out three areas of nonconformance with the Glenwood Meadows Zoning and Development Plan (GMZDP) contained in the Annexation and Development Agreement, specifically parking lot design, lighting design, and landscaping; the P&Z Commission may choose to apply flexibility towards these elements under the Location & Extent Criteria. This means that both Location & Extent and 1041 Review approvals are required for the ultimate approval of the transit center phase.

Specifically, the parking lot design requirements in the GMZDP include parking lot islands. The City of Glenwood Springs Code eliminated parking lot islands in 2018 instead favoring

landscaping areas at the end of rows. The requirement of islands would reduce the parking spaces further which is not a logical approach for a Park & Ride service. Staff encourages P&Z Commission to review these aspects for flexibility under the Location and Extent application.

#### Changes to Recommended Conditions of Approval

The recommended findings and conditions of approval have been restated in their entirety in this memo. For clarity Staff has also provided the following summary of changes from the conditions of approval recommended on December 17<sup>th</sup>:

- Conditions recommending changes to the transit center parcel's landscaping, lighting, and retaining walls were moved to the Location & Extent Review conditions list.
- Modified roundabout contribution conditions
- The electric infrastructure condition of approval has been modified to require Electric Department review for electric infrastructure upgrades beyond what will be needed to service the project as it is laid out in the plans. The electric bus chargers shown as "future" in the plans will be subject to this future review. In other words, no contribution toward electric infrastructure beyond typical system improvement fees are requested for Phases 6A, 6B, and 8.
- The standard condition "The applicant shall comply with and address all City referral comments prior to the issuance of a grading permit or building permit" was not included in the previous staff report, but was noted and recommended in the staff presentation on December 17<sup>th</sup>. This condition is included in the recommended conditions list in this memo.
- Condition about updating traffic report has been removed because that has been completed.
- Condition about piping for irrigation underneath Wulfsohn Road has been removed because RFTA and the City have agreed on a way to manage this.
- A new condition has been added requiring RFTA to reconstruct per City standards the portions of Wulfsohn Road that will be removed for the transit center construction. Buses can have severe negative impacts on road surfaces, especially in areas where they are turning and braking. A 2023 geotechnical study led to the development of preferred road cross sections for roads built on the particular soils found in Glenwood Meadows that will allow the roads to hold up to the weight and forces of buses. These technical specifications for road cross sections have been included as an attachment in the information packet, and the document also contains general areas where this pavement replacement will need to occur.

#### **ACTION ITEMS & STAFF RECOMMENDATIONS**

Staff recommends approval of the **1041 Review application** with the following suggested conditions:

**Recommended Conditions of Approval (1041 Review only):**

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.
4. At the time of Final Plans Review submission, the plans shall be revised to include the following changes:
  - a. The transit center plans shall be amended to include offsets in the retaining walls of at least 12 inches every 50 feet.
  - b. The sidewalk along Wulfsohn Rd. adjacent to the transit center parcel shall be eight feet in width.
  - c. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
  - d. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.
5. Prior to submitting a building and/or grading permit application, the owner shall:
  - a. Submit and receive approval of a Final Plans application in accordance with Municipal Code section 070.060.050(c).
  - b. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
  - c. Enter into a Development Agreement that memorializes the development approvals.
  - d. Provide all other permits from outside jurisdictions necessary for the project.
6. Prior to issuance of the building permit, the applicant shall:
  - a. Obtain Right-of-Way Encroachment Licenses for all private uses or structures to be located within the right-of-way.
7. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.

8. Before commencement of roundabout construction, RFTA shall contribute funding to the actual construction cost of a roundabout at the western Midland Avenue/Wulfsohn Road intersection in a percentage amount equal to the percentage increase in traffic volume at the intersection attributable to RFTA's Phase 6A. This will be memorialized in the Development Agreement.
9. RFTA shall request can and will serve letters for electric service for any electric load beyond what is required to service the development as submitted in the plans. These elements included in the plans include all items on the Glenwood Springs Electric Department estimate titled "RFTA 6A & 6B" dated January 15, 2025, and included with the January 28, 2025 staff report packet. All items noted as "future" in the plans, such as future electric bus chargers, shall be subject to review by the Electric Department.
10. All repairs, encroachments and replacements to Wulfsohn Road associated with the transit center construction shall be replaced with road cross sections meeting City standards. These cross section designs are shown in the attachment "Glenwood Meadows City Standard Roadway Details" along with the general locations of roadway replacement areas.
11. The applicant shall comply with and address all City referral comments prior to the issuance of a grading permit or building permit.

**Suggested Findings for the 1041 Review:**

*The full staff analysis for this and the Location & Extent Review can be found in the December 17<sup>th</sup> staff report.*

- (1) The health, welfare, and safety of the residents of this City will be protected and served.
- (2) The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.
- (3) The project is financially feasible.
- (4) With the Conditions of Approval proposed, the project is not subject to significant risk from natural hazards.
- (5) With the Conditions of Approval proposed, the project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems.
- (6) The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience.
- (7) The project will not significantly degrade air quality.

- (8) The project will not significantly degrade existing visual quality.
  - (9) With the Conditions of Approval proposed, the project will not significantly degrade surface water quality.
  - (10) With the Conditions of Approval proposed, the project will not significantly degrade groundwater quality.
  - (11) The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.
  - (12) The project will not significantly deteriorate soils and geologic conditions.
  - (13) The project will not cause a nuisance.
  - (14) The project will not result in unreasonable risk of releases of hazardous materials.
  - (15) Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas.
  - (16) The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements.
  - (17) The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities.
  - (18) Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.
  - (19) The project emphasizes the most efficient use of water, including the recycling, reuse, and conservation of water.
  - (20) With the Conditions of Approval proposed, the project will encourage the smooth flow of motorized and nonmotorized traffic.
  - (21) With the Conditions of Approval proposed, the project will foster the development of such areas in a manner calculated to preserve the smooth flow of such traffic.
  - (22) With the Conditions of Approval proposed, the project will preserve desirable existing community patterns.
-

## **LOCATION & EXTENT CRITERIA OF APPROVAL**

Per section 070.060.050 of the Municipal Code:

In reviewing a proposed Location and Extent application, the Planning Commission shall consider whether or not the proposed location and extent:

- i. Is consistent with the Comprehensive Plan and other City plans and policies;
- ii. Is consistent with the general purpose and intent of this Code; and
- iii. Minimizes adverse impacts to the health, safety, and welfare of the inhabitants of the surrounding areas and the city.

With the conditions of approval recommended in this report, Staff believes that these three criteria are met for the administration building and maintenance building.

Staff recommends approval of the **Location & Extent application** with the following suggested conditions:

### **Recommended Conditions of Approval for Location & Extent Review:**

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.
4. Prior to building permit review of the administration building and maintenance building, the plans shall be revised to include the following changes:
  - a. Show required common open space and calculate its percentage of the administration building parcel.
  - b. Revise landscaping plan showing compliance with landscaping standards, streetscape standards, and parking area landscaping standards on the administration building parcel.
  - c. Provide mounting heights of outdoor light fixtures that do not exceed 35 feet in height.
  - d. Revise outdoor lighting plan to reduce estimated illumination levels to within allowed levels.
  - e. Wherever feasible, reduce height of retaining walls to allowed limits and include methods such as terracing and screening to reduce the visual impact of these walls.
  - f. Add sidewalk width along Wulfsohn Rd. to plans. The minimum width shall be eight feet.
  - g. Revise administration building plans to comply with code requirements

- for maximum height.
- h. A fire hydrant shall be installed on a landscaping island near the administration building.
  - i. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
5. Prior to building permit review of the transit center, the plans shall be revised to include the following changes:
- a. The transit center plans shall be amended to include offsets in the retaining walls of at least 12 inches every 50 feet.
  - b. The landscaping plans for the transit center parcel shall be revised to meet City and GMZDP landscaping standards, including parking area landscaping, street trees, and minimum rates of native and drought-resistant species.
  - c. The transit center building shall be adjusted to meet front setback requirements or shall receive approval through the Municipal Code's flexibility procedures.
  - d. The architectural plans for the transit center building shall be revised to incorporate at least two design elements from section V.D.2.c of the Zoning and Development Plan.
  - e. Revise plans to include mounting heights of outdoor light fixtures that do not exceed 35 feet in height.
  - f. The portion of the retaining wall north of the parking area that is shown encroaching on a utility easement shall be adjusted so that it does not encroach on the utility easement.
6. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.
7. Prior to submitting a building and/or grading permit application, the owner shall:
- a. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
8. Prior to approval of a building permit, the Minor Subdivision Plat of Glenwood Springs Municipal Operations Center shall be amended and recorded removing all easements that conflict with the proposed maintenance building, if any conflict.
9. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.
10. RFTA shall request can and will serve letters for electric service for any electric load beyond what is required to service the development as submitted in the plans. These elements included in the plans include all items on the Glenwood Springs Electric Department estimate titled "RFTA 6A & 6B" dated January 15, 2025, and included with the January 28, 2025 staff report packet. All items noted as "future" in the plans, such as future electric bus chargers, shall be subject to review by the Electric Department.

11. The applicant shall comply with and address all City referral comments prior to the issuance of a grading permit or building permit.

**Suggested Findings for Location & Extent Review:**

- (1) With the Conditions of Approval proposed, the project is consistent with the Comprehensive Plan;
- (2) With the Conditions of Approval proposed, the project is consistent with the general purpose and intent of the Municipal Code; and
- (3) With the Conditions of Approval proposed, the project minimizes adverse impacts to the health, safety, and welfare of the inhabitants of the surrounding areas and the city.

## Planning and Zoning Commission Report

Date: December 17, 2024  
To: Planning and Zoning Commission  
From: Watkins Fulk-Gray, Senior Planner, AICP  
Subject: Planning File #21-24, Matters of State Interest 1041 Permit Application, and Location and Extent for Roaring Fork Transportation Authority

|                       |                                                                                                                                               |

| LOT SIZE              | 12.65 acres, based on Assessor's records                                                                                                      |

### ACTION ITEMS

**Action 1 – 1041 Review** – to consider recommendation of approval of a 1041 Review for construction of a new 9-bay transit center with a 3,232-square foot building.

**Staff recommendation:** *Staff recommends **approval** of the 1041 Review with the findings and conditions at the end of this report.*

**Action 2 – Location & Extent Review** – to consider recommendation of approval of a Location & Extent Review for construction of a new 29,185-square foot administration building and a 2,720-square foot maintenance building.

**Staff recommendation:** *Staff recommends **approval** of the Location & Extent Review with the findings and conditions at the end of this report.*

The Planning & Zoning Commission is the deciding body for Location & Extent Reviews and the recommending body for 1041 Reviews, which are decided by City Council.

---

## **BACKGROUND AND PROJECT SUMMARY**

This project consists of two action items, a 1041 Review and Location & Extent Review, that together, encompass three buildings, on three parcels, constituting three phases of the Roaring Fork Transportation Authority's plans to make Glenwood Springs its hub of operations. These two related but separate applications will be governed by different but overlapping sets of regulations. The 1041 Review, for an expanded transit center at the existing West Glenwood Park'n'Ride, is subject to standards for the Glenwood Meadows Annexation and Development Agreement (GMADA), the Municipal Code's 1041 regulations that are described below, and also by certain sections of the Municipal Code where the GMADA is silent. The Location & Extent Review, for a new administration office building and a new maintenance building, is subject to the Municipal Code and its Sensitive Area Protection standards. These sets of regulations will be discussed in the staff analysis sections of this report.

In March of 2022, City Council passed a Code Amendment adopting Article 070.080 – Guidelines and Regulations for Matters of State Interest. The purpose and intent of the regulations is to facilitate the identification, designation, and administration of matters of State interest consistent with the statutory requirements in C.R.S. § 24-65.1-101 and the guidelines established in the Comprehensive Plan. The standards are designed to prevent unsuitable site selection for public utilities, protect scenic and recreational assets, minimize environmental impacts, avoid incompatible uses, avoid conflict with other land use plans, protect the character of the City, promote efficient economic use of public resources, and preserve the health and welfare of the citizens of the City.

Above: Overall site plan of all three proposed facilities.

---

## **REVIEW CRITERIA AND STAFF ANALYSIS – 1041 REVIEW**

The 1041 Review component of this project, for the proposed transit center, has been reviewed according by regulations set forth in Article 070.080 - Guidelines and Regulations for Matters of State Interest of the Municipal Code that apply to the 1041 Review. This analysis, and the summary table below, is a summary of compliance with regulations for only the **transit center building (Phase 6A)**.

| <b><u>CODE STANDARD</u></b>          |                                                                                  | <b><u>PROPOSED</u></b> | <b><u>REQUIREMENT<br/>MET</u></b> |
|--------------------------------------|----------------------------------------------------------------------------------|------------------------|-----------------------------------|

| Parking Area Trees                   | 2 trees per 200 s.f. landscaped island area; required amount needs clarification | 19                     | Needs clarification               |
| Streetscape landscaping              |                                                                                  |                        |                                   |
| Street trees                         | 1 tree per 35 linear feet of street frontage; 25 street trees required           | 16                     | NO                                |
| Setback                              |                                                                                  |                        |                                   |

|                        |                                          |                           |                     |
|------------------------|------------------------------------------|---------------------------|---------------------|
| Front                  | 5' minimum, 25' maximum                  | 4.8'                      | NO                  |
| Rear                   | 5'                                       | Not provided              | YES                 |
| Side                   | 5'                                       | Not provided              | YES                 |
| Height                 | 40' maximum                              | 28'4"                     | YES                 |
| Parking                | 1 per 300 s.f.                           | 98                        | 105                 |
| Sidewalk               | 8 feet in width along Wulfsohn Rd.       | Not provided              | NO                  |
| Bike Parking           | 6 bike parking spaces                    | 6                         | YES                 |
| Exterior lighting      |                                          |                           |                     |
| Parking area lighting  | Must be between 0.7 and 7.0 foot-candles | All readings within range | YES                 |
| Light mounting heights | 35-foot maximum                          | Not provided              | Needs clarification |

#### *Setbacks*

The proposed transit center is subject to Municipal Code standards for setbacks. The front of the building sits slightly too close to the property line; a condition of approval has been recommended that the building move back 0.2 feet to meet setback requirements, or to pursue a flexibility measure such as administrative adjustment for reducing setbacks.

#### *Building height*

The proposed transit center building, at 28 feet, is under the maximum allowed height.

#### *Building design and materials*

The GMADA contains specific design and building material requirements.

A requirement for recessed customer entrances does not apply to the proposed transit center. While the building has interior spaces, it is not a retail development where people enter and exit and where the entrance would merit special design treatment. As a transit center, the focal point is the outdoor transit platform and outdoor seating area.

As a nonresidential building less than 60,000 square feet, the transit center building must have at least two of the five design elements listed in the GMADA for every 30 feet of building elevation. The design proposed includes changes in color, texture, or materials, meeting one of the design requirements. The design could also incorporate projections and reveals, but not enough detail is available to determine if this second design element is present. A condition of approval has been recommended to ensure that these design criteria are met.

The transit center proposal meets the GMADA requirements for building design and materials. The building design features exterior materials of stone veneer, earth-toned architectural wall panels, and steel accents.

Above: The proposed Wulfsohn Road-facing elevation of the transit center.

#### *Vehicular and Pedestrian Circulation and Access:*

The GMADA requires direct and clear vehicular paths from the entrance to parking areas and pedestrian access to the site and to the entrances of buildings. These elements are all achieved.

#### *Parking:*

As required by the GMADA, parking is terraced and distributed to where there is less visual impact.

#### *Landscaping*

The proposed landscaping and parking area landscaping for the transit center parcel needs revision to meet the GMADA standards. The parcel on which the proposed transit center is located requires a significantly higher amount of landscaping area to be set aside than the Municipal Code would if it were the controlling set of regulations. The GMADA requires 30% of the parcel to be set aside for landscaping, and further specifies the minimum number of plantings within the areas of landscaping. The GMADA requires 20% of the total parking area to be set aside also for landscaping, with specific planting requirements within the parking lot landscaping area.

The GMADA also contains specific requirements for street trees along Wulfsohn Rd. One street tree for every 35 linear feet of street frontage are required to be planted; with 875 linear feet of frontage along Wulfsohn Rd., this equates to 25 required trees. Only 16 are currently proposed. This situation is made more difficult because of the nature of a transit center, which needs a significant amount of the frontage to be open for bus travel.

Below is a summary of landscaping information that needs to be provided in RFTA's next submission or needs to be changed to meet regulations:

- Increase landscaping area to 30%
- Increase number of shrubs or show that requirements are met with existing shrubs on the site
- Increase the percentage of species in the landscaping plan that are native and drought-resistant to at least 75%
- Provide parking area landscaping as percentage of total parking area; if necessary, revise plans to meet these standards
- Provide area of landscaped islands; if necessary, revise plans to include the required number of tree plantings

- Increase street trees to meet requirements

These issues have been included in the recommended conditions of approval.

#### *Parking lot landscaping*

Need to redesign to meet standards. The parking area will need to be redesigned to meet GMADA requirements, which state that parking rows need to be broken up by landscaped islands with no more than eight parking spaces in a row, with specific planting requirements in the landscaped islands. This has been included as a recommended condition of approval.

#### *Retaining walls*

There are numerous retaining walls proposed that are longer than 50 feet. The GMADA requires a break in retaining walls for every 50 feet. Height limits for retaining walls are six feet, which the project plans state are feasible. A condition of approval has been included requiring offsets in these retaining walls at least every 50 feet.

A small portion of a retaining wall north of the parking area is shown encroaching on a utility easement. A condition of approval has been recommended that the retaining walls be moved outside the easement.

#### *Exterior lighting*

The photometric plans for the proposed transit center show that the estimated illumination levels meet the ranges allowed by the Municipal Code. The mounting heights of the light fixtures are not provided in the plans; a condition of approval has been suggested that they be specified as not exceeding the 35' maximum.

#### *Community amenities*

The GMADA requires a minimum of 1,000 square feet of outdoor shared community amenity space per 50,000 square feet of commercial building area or a percentage thereof. This amenity space is intended to be a gathering space such as patios or plazas with seating area, mini-parks, water features, and clock towers, with flexibility allowed for developments that are "similar deliberately shaped area and/or focal feature," in the City's judgment. Staff believes that the nature of a transit center, with its seating and the focal point of the platform, meets this requirement without the need for additional amenities.

#### *Improvements in the right-of-way*

Several portions of the proposed transit center are in City right-of-way (ROW). This situation is only allowed when the City intends to take ownership of the improvements or when permitted by a ROW Encroachment License. The elements proposed to be located in the ROW include, the We-Cycle station, fences, retaining walls, paneling for electric charging infrastructure, storm sewer, and portions of the bus chargers. A condition of approval has been recommended requiring approval of a ROW Encroachment License for any private property or structures associated with the transit center that are to be located in the ROW.

#### *Development Standards for Parcel "A", Mixed-Use Campus*

The GMADA contains standards that are specific to the site location, which is designated "Mixed-Use Campus." The proposed design meets these specific standards in the following

ways:

- 1) The transit center is oriented toward Wulfsohn as required.
- 2) No design transitions are necessary because the proposed development does not border residential developments.
- 3) While the rest of the Mixed Use Campus sub-area is undeveloped, this project will allow it to be connected and integrated with its sidewalk along Wulfsohn Road.

#### *Sidewalks*

Sidewalk widths are not shown on the plans. Current sidewalk widths are five feet, but to meet code, they must be upgraded to eight feet. A condition of approval has been recommended for this.

### **REVIEW CRITERIA SPECIFIC TO 1041 REGULATIONS**

All applications for 1041 Review must be evaluated against the following 19 general criteria. Staff review and analysis are included below with inset text below each criterium. Where such terms as "reasonable," "feasible" and "adequate" are used in the foregoing criteria, the Community Development Department Director shall determine in each case what is or is not reasonable, feasible, or adequate. Staff analysis is included in **BOLD** below the criteria.

- (1) The health, welfare, and safety of the residents of this City will be protected and served.

**Staff believes that with the included conditions of approval, the proposed transit center development will serve and improve the health, safety, and welfare of residents.**

- (2) The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.

**The proposed transit center is in general conformity with the Comprehensive Plan, supporting goals, policies, and actions such as:**

- **Promote transit-oriented development**
- **Expand local transit and enhance regional transit to, from, and through Glenwood Springs**
- **Support the expansion of green transportation options**
- **Plan for transit stations located in all mixed-use neighborhoods by incorporating principles of smart growth, new urbanism and green building**
- **Concentrate growth in Glenwood Springs in locations that can be served by high-frequency transit**

- (3) The project is financially feasible. The determination of financial feasibility of the project may include but is not limited to the following considerations:
  - a. The business plan submitted by the applicant.
  - b. Relevant bond issue, loan and other financing approval or certifications (ex: approved bond issue; bond counsel opinion).

**The applicant organization, RFTA, has provided evidence that they have a diverse and substantial set of funding sources to make the project feasible.**

(4) The project is not subject to significant risk from natural hazards. The determination of risk from natural hazards to the project may include but is not limited to the following considerations:

- a. Faults and fissures.
- b. Unstable slopes including landslides, rock slides, and avalanche areas.
- c. Expansive or evaporative soils and risk of subsidence.
- d. Wildfire hazard areas.
- e. Floodplains.

**Geohazards—hydrocompactive soils and debris fan—do exist on this site, according to the City’s geohazard mapping. The past ten years have shown that it is possible to build in the challenging geology of Glenwood Meadows, but also that buildings will fail when the conditions are not properly taken into account. Two recommendations for designing the foundations are made in the geotechnical report. Conditions of approval have been recommended to ensure safety and full mitigation from geologic hazards.**

(5) The project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems. The determination of the effects on local government services and infrastructure may include but is not limited to the following considerations:

- a. Current and projected capacity of roads, schools, infrastructure, drainage and/or stormwater infrastructure, housing, recreational facilities, emergency services, and other services necessary to accommodate development, and the impact of the project upon the current and projected capacity.
- b. Changes caused by the project in the cost of providing education, transportation networks, water treatment and wastewater treatment, stormwater drainage, channel stabilization, recreation facilities, bridges, emergency services, or other governmental services or facilities.
- c. Need for temporary roads to access the project for construction and maintenance.
- d. Change in demand for public transportation.

**The project does challenge the City’s electric and road infrastructures. The proposed bus and car chargers, in particular, take significant capacity from the existing substation and transformers serving the area. Ultimately, without infrastructure upgrades with the project as proposed, the City would lose redundancy that has been planned for Glenwood’s grid system. However, there are infrastructure upgrades that will allow the project to proceed as proposed without detriment to the City’s grid. A condition of approval has been recommended that will establish a separate process for the Electric Department to take stock of its needs and to engage with RFTA in a fair cost-sharing agreement.**

**The traffic impact study provided by the applicants makes clear that there will be significant impacts to the road system from the additional traffic the project will generate, particularly to the western Wulfsohn Road/Midland Avenue intersection, the Devereux/Midland intersection, the roundabouts at I-70's exit 114, and the 9<sup>th</sup>/Grand intersection. A closer reading of the traffic impact study reveals, in the opinion of the City's Engineering and Public Works departments, that the provided traffic impact study has flaws that need correcting, which include not providing analysis for three intersections that are important to consider and discrepancies with the traffic counts. The City's Engineering Department has determined that a roundabout is the preferred option to enhance the Wulfsohn/Midland intersection functionality and has already engaged in preliminary designs for a roundabout at this intersection. This project makes the need for intersection improvements acute. A condition of approval has been recommended requiring RFTA update its traffic impact study and pay a share of the construction costs of the roundabout.**

(6) The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience. The determination of effects of the project on recreational opportunities and experience may include but is not limited to the following considerations:

- a. Changes to existing and projected visitor days.
- b. Changes in quality and quantity of fisheries.
- c. Changes in instream flows or reservoir levels.
- d. Changes in access to recreational resources.
- e. Changes to quality and quantity of hiking, biking, or horseback riding trails.
- f. Changes to hunting experiences.
- g. Changes to open space.
- h. Changes to existing conservation easements.
- i. Changes to regional or neighborhood parks.
- j. Changes to recreational scenic experience.

**It is possible that the project will promote greater access to the Wulfsohn-area and Red Mountain trails through increased bus service to the site, which is located near the Wulfsohn trails. It is not believed that construction activities will interfere with trail users.**

(7) The project will not significantly degrade air quality. The determination of effects of the project on air quality may include but is not limited to the following considerations:

- a. Changes in visibility and microclimates.
- b. Applicable air quality standards.

**The project will enable more bus traffic, but the project also programs additional electrification of RFTA's bus system. Moreover, bus traffic, by its nature, is intended to reduce overall air pollution through removing more polluting vehicles from the roadways. It is believed that the proposal will not degrade air quality.**

- (8) The project will not significantly degrade existing visual quality. The determination of visual effects of the project may include but is not limited to the following considerations:
- a. Visual changes to ground cover and vegetation, waterfalls and streams, or other natural features.
  - b. Interference with viewsheds and scenic vistas.
  - c. Changes in landscape character types of unique land formations.
  - d. Compatibility of structure size and color with scenic vistas and view sheds.
  - e. Changes to open space.
  - f. Changes to existing conservation easements.
  - g. Changes to impacts to regional or neighborhood parks.

**The project will not significantly degrade the site's aesthetic qualities because the site is already developed and is surrounded by existing development.**

- (9) The project will not significantly degrade surface water quality. The determination of effects of the project on surface water quality may include, but is not limited to, the following considerations:
- a. Changes to existing water quality, including patterns of water circulation, temperature, conditions of the substrate, extent and persistence of suspended particulates and clarity, odor, color or taste of water.
  - b. Applicable narrative and numeric water quality standards.
  - c. Changes in point and nonpoint source pollution loads.
  - d. Increase in erosion.
  - e. Changes in sediment loading to waterbodies.
  - f. Changes in stream channel or shoreline stability.
  - g. Changes in stormwater runoff flows.
  - h. Changes in trophic status or in eutrophication rates in lakes and reservoirs.
  - i. Changes in the capacity or functioning of streams, lakes, or reservoirs.
  - j. Changes to the topography, natural drainage patterns, soil morphology and productivity, soil erosion potential, and floodplains.
  - k. Changes to stream sedimentation, geomorphology, and channel stability.

**Surface water runoff is designed to be captured through piping and underground chamber systems after being filtered through native and drought-resistant landscaping. The drainage report and stormwater plans need to be revised so as to consider the impact on the culvert underneath Midland Avenue and not overload it, causing it to fail. This has been recommended as a condition of approval.**

- (10) The project will not significantly degrade groundwater quality. The determination of effects of the project on groundwater quality may include, but is not limited to, the following considerations
- a. Changes in aquifer recharge rates, groundwater levels and aquifer capacity including seepage losses through aquifer boundaries and at aquifer-stream interfaces.
  - b. Changes in capacity and function of wells within the impact area.
  - c. Changes in quality of well water within the impact area.

**Groundwater quality will be protected by using the same practices as protecting surface water quality, including properly sized piping and conveyances, in addition to erosion prevention measures that will be required by building or grading permits.**

- (11) The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.

**No large-scale wetland or riparian areas exist in the project's vicinity.**

- (12) The project will not significantly deteriorate soils and geologic conditions. The determination of effects of the project on soils and geologic conditions may include but is not limited to the following considerations:
- a. Loss of topsoil due to wind or water forces.
  - b. Changes in soil erodibility.
  - c. Physical or chemical soil deterioration.
  - d. Terrain deformation/mass wasting/subsidence.
  - e. Compacting, sealing and crusting.
  - f. Waterlogging.
  - g. Soil morphology and productivity.

**To avoid unwanted soil and geologic conditions such as erosion and soil compaction, all recommendations from the project's geotechnical experts must be followed and the geotechnical report must support all stormwater, civil, and structural designs. Conditions of approval have been recommended ensuring that this happens.**

- (13) The project will not cause a nuisance. The determination of nuisance effects of the project may include, but is not limited to, the following considerations: Increase in odors, dust, fumes, glare, heat, noise, vibration or artificial light.

**Potential sources of nuisances for this project after buildout would include lighting and noise from buses. The exterior lighting standards should mitigate this situation. Noise from buses will likely exist, though the site already experiences bus traffic at the existing transit stop. It is not anticipated that noise from buses will excessively contribute to a nuisance situation, given that the nearest residential development is approximately a quarter mile away.**

- (14) The project will not result in an unreasonable risk of releases of hazardous materials. The determination of the risk of release of hazardous materials caused by project may include but is not limited to the following considerations:
- a. Plans for compliance with federal and state handling, storage, disposal, and transportation requirements.
  - b. Use of waste minimization techniques.
  - c. Adequacy of spill prevention and response plans.

**No risk from hazardous material releases is anticipated.**

- (15) Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas. The determination of potential for pollution of the aquifer recharge areas by the project may include but is not limited to the following considerations:
- a. Proximity of urban development and population densities to aquifer recharge areas.
  - b. Proximity of stormwater and sanitation systems to aquifer recharge areas.
  - c. Changes in water quality in the aquifer recharge areas.

**There are no known impacts to aquifer recharge zones.**

- (16) The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements. The determination of whether the project is reasonably necessary may include but is not limited to the following considerations:
- a. Relationship to reasonable growth projections and local land use plans.
  - b. Relationship to other providers' service areas.
  - c. Whether the project is not in compliance with regulatory or technological requirements or will not be in compliance in the near future.

**The project represents an expansion of RFTA's transit service and commitment to mass transit. The transit center will expand to nine bus bays, include bus charging infrastructure, include more amenities to riders, and include significantly more parking. A significant portion of Glenwood Springs's workforce commutes from outside the city, and vehicle traffic is a primary concern within the city. This project has the potential to reduce traffic and give commuters greater opportunities to take mass transit.**

- (17) The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities, including the following considerations:
- a. Site selection and construction will not create or encourage growth and development which is incompatible with and cannot be accommodate by the local financial capacity of the area or residents to be served.
  - b. New systems will not overburden existing systems and current and future demand for services can be met within existing and proposed capacity.
  - c. The project will not create proliferation of special districts or overlapping of special districts with the boundaries of other special districts or municipalities.
  - d. The project is the best alternative for the provision of services to the geographical area serviced.
  - e. To the extent feasible, facilities and systems shall be consolidated with existing facilities and systems in the area.

- f. The project will not result in duplicative services or excessive capacity.
- g. The project will be administered so as to minimize disruption of utility services and preserve desirable existing community patterns.

**As discussed in the criterium addressing service delivery capacity, the project does represent challenges to both the road system and electric infrastructure. The site location is ideal for the expansion of transit services, but conditions of approval and separate agreements will be necessary for cost sharing of upgrades that will be needed to the road and electric systems.**

- (18) Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.

The site has previously been used for governmental entities, so no economic detriment is anticipated with the proposal.

- (19) The project shall emphasize the most efficient use of water, including the recycling, reuse, and conservation of water, including the following considerations:

- a. Whether the project uses readily available conservation techniques.
- b. Whether the project recycles water to the greatest extent permissible.
- c. Whether the project will use raw water for exterior or irrigation use if available.

**The applicant team has identified that they will be using water efficient toilets and plumbing fixtures and will be using raw water for all irrigation. However, it is unclear if it will be possible to transport the raw water to the transit center site. The City's past experience with irrigation lines running underneath streets in Glenwood Meadows, as the applicants propose underneath Wulfsohn, has shown that this is a bad long-term idea and leads to street failures. A condition of approval has been recommended for the applicant to revise the plans removing the irrigation piping beneath Wulfsohn.**

### **Review Criteria Specific to Areas Around Key Facilities**

No permit shall issue for a project related to areas around designated key facilities in which development may have a material impact upon the key facility or surrounding community unless it contains conditions tailored to mitigate the environmental, infrastructure, and financial impacts to the City described in subsection (b) below. Conditional permits shall issue at the discretion of the Permit Authority, pursuant to 070.080.360.

Applications for a project related to areas around designated key facilities in which development may have a material impact upon the key facility or surrounding community shall be subject to the following mandatory special review criteria.

- 1) The project will encourage the smooth flow of motorized and nonmotorized traffic.
- 2) The project will foster the development of such areas in a manner calculated to preserve the

smooth flow of such traffic.

- 3) The project will preserve desirable existing community patterns.

**City Staff believes the project's design will have a satisfactory traffic flow internally, but without changes to the nearby Wulfsohn/Midland intersection, there will not be a smooth or safe traffic flow. City Staff has identified that a roundabout is the preferred solution to upgrade this intersection. Because RFTA will be contributing to the undesirable and unsafe condition of this intersection, the City has requested in a condition of approval that they pay a portion of the construction cost of a roundabout.**

#### **REVIEWING AGENCY COMMENTS**

The City of Glenwood Springs referral agencies were forwarded application materials for the proposed transit center. The Engineering, Public Works, and Electrical Department comments are provided as attachments to this report. All comments have been incorporated as conditions of approval for the project.

---

## **REVIEW CRITERIA AND STAFF ANALYSIS – LOCATION & EXTENT REVIEW**

Above: The green star represents the land parcel upon which the administration building is proposed.

Above: The overall site plan for the administration building site.

The Location & Extent Review component of this project, for the proposed administration building and maintenance building, has been reviewed against Title 070 of the Municipal Code, the zoning regulations. The Sensitive Area Protection Standards, section 070.040.020, apply to

the Location & Extent Review because of the presence of geohazards. This analysis, and the summary table below, is a summary of compliance with zoning standards for only the **administration building and maintenance building (Phase 6B and 8)**.

Summary of compliance with zoning standards for the **administration building (Phase 6B)**.

| <b><u>CODE STANDARD</u></b>          |                                                                       | <b><u>PROPOSED</u></b> | <b><u>REQUIREMENT</u></b><br><b><u>MET</u></b> |
|--------------------------------------|-----------------------------------------------------------------------|------------------------|------------------------------------------------|
| Common Open Space                    | 10%; 22,385 square feet                                               | Not provided           | Needs Confirmation                             |
| Landscape                            | 15%; 16,505 square feet                                               | 46,230 square feet     | YES                                            |
| Landscaping specific standards       |                                                                       |                        |                                                |
| Trees                                | 1 per 400 s.f. of required landscaped area; 42 trees                  | 68                     | YES                                            |
| Shrubs                               | 1 per 100 s.f. of required landscaped area; 166 required              | 154                    | NO                                             |
| Perennials                           | 1 per 50 s.f. of required landscaped area; 331 required               | Not provided           | NO                                             |
| Native and drought-resistant species | Native and drought tolerant species must account for 75% of plantings | 55%                    | NO                                             |
| Parking Area Landscaping             |                                                                       |                        |                                                |
| Surface Area Landscape               | 20% of total surface parking area                                     | Not provided           |                                                |
| Interior Landscape                   | 10 square feet of landscaping per parking space; 1,050 s.f.           | Not provided           |                                                |
| Streetscape Landscaping              |                                                                       |                        |                                                |
| Street Trees                         | 1 tree per 75 linear feet of street frontage; 10 required             | 8                      | NO                                             |
| Setback                              |                                                                       |                        |                                                |

|                 |                                    |                                    |     |
|-----------------|------------------------------------|------------------------------------|-----|
| Front           | 5' minimum, 25' maximum            | 12.5'                              | YES |
| Rear            | 7.5'                               | Not provided                       | YES |
| Side            | 5'                                 | N/A                                | N/A |
| Height          | 40'                                | 48'8" (with mechanical screening); | NO  |
| Parking         | 1 per 300 s.f.; 98 required        | 105                                | YES |
| Sidewalk        | 8 feet in width along Wulfsohn Rd. | 5'                                 | NO  |
| Bike Parking    | 9 bike parking spaces              | 12                                 | YES |
| Trash Enclosure | Must be enclosed                   | Enclosed                           | YES |

Summary of compliance with zoning standards for the **maintenance building (Phase 8)**.

| <b><u>CODE STANDARD</u></b> |                  | <b><u>PROPOSED</u></b> | <b><u>REQUIREMENT MET</u></b> |
|-----------------------------|------------------|------------------------|-------------------------------|
| Common Open Space           | 5%; 11,193 s.f.  | Not provided           | Needs clarification           |
| Setback                     |                  |                        |                               |
| Front                       | 20               | Not provided           | YES                           |

| Parking                     | None             | None                   | YES                           |
| Sidewalk                    | N/A              | None                   | N/A                           |
| Bike Parking                | None             | None                   | YES                           |
| Trash Enclosure             | Must be enclosed | N/A                    | N/A                           |

#### *Setbacks*

While not all the distances from building edges to property lines are provided, it is clear that both buildings meet minimum setbacks.

#### *Building height*

The proposed maintenance building meets maximum height requirements. The administration building exceeds maximum building height limits. The administration building has a maximum height of 48'8," which includes an approximately 30-foot segment of mechanical equipment

screening. The screening of mechanical equipment is allowed an additional five feet of height above the maximum height limit, but the proposal exceeds this allowance by more than three feet. Additional allowances exist in the Municipal Code for parapet walls, the tops of which may extend 2.5 feet above the height limit. The proposed design is broken up by sections of alternating heights. A condition of approval has been recommended requiring compliance with maximum building height, but with the possibility for allowed exceptions.

### *Building design and materials*

Sensitive Area Protection regulations, rather than nonresidential design standards, contain building design standards for areas with mapped geohazards. These design standards emphasize blending the design with natural terrain, requiring neutral and earth-toned hues on exterior building surfaces, roofs, and mechanical equipment. The proposal achieves this goal with its use of dark reds and browns. The brick and stone primary materials with metal accents meet the Sensitive Area Protection requirements materials that can withstand Glenwood's climate.

Above: Two renderings of the proposed administration building.

### *Landscaping*

The proposed landscaping plan for the administration building includes landscaping buffers around the building site and parking lot. While the plan programs more than enough landscaped area, it is still deficient in the number of street trees proposed and the percentage of the planting schedule that is native and drought-resistant species. Further information is also needed to determine compliance with the required number of perennial plantings and parking area landscaping requirements. A condition of approval has been recommended requiring compliance with landscaping standards.

The landscaping requirements apply only to the administration building, which will sit on a different land parcel from the maintenance building. The maintenance building does not add enough floor area to the parcel on which it sits, which contains other large buildings already, to trigger the need to provide a landscaping plan.

#### *Retaining walls*

The application materials show plans for retaining walls greater than the six feet allowed due to the very steep slopes on the site. A condition of approval has been recommended that the retaining walls be reduced in height as much as possible and include methods such as terracing and screening wherever feasible to reduce the visual impact of these walls. Any retaining wall over four feet in height requires engineered designs.

#### *Exterior lighting*

The photometric plan shows some portions of the parking area out of compliance with the maximum lighting levels. The mounting heights of exterior lights have not been provided. A condition of approval has been recommended that the lighting plans be revised to meet maximum mounting heights and reduce illumination levels in some areas.

#### *Comprehensive Plan compliance*

The project is in general compliance with the Comprehensive Plan. The administration building and maintenance building support the following goals, policies or actions:

- Serve as a leader in regional transportation and strengthen partnerships to pursue federal funding and to “regionalize” nonfederal funding commitments. Begin to budget transportation and capital improvement work programs and work with RFTA and others to leverage multi-modal opportunities (such as road/Bus Rapid Transit or road/rail) to fund and implement corridor routes for SH82, Railroad Corridor and South Bridge.
- Continue and strengthen partnerships between Federal, State, and Municipalities to build a more robust transportation system to serve the region such as Bustang, Pegasus, and RFTA.
- Develop and implement mitigation strategies to reduce the impact of regional growth on traffic congestion on major roads, highways, and residential streets.

### **REVIEWING AGENCY COMMENTS**

The City of Glenwood Springs referral agencies were forwarded application materials. The Engineering, Public Works, and Electrical Department comments are provided as attachments to this report. All comments have been incorporated as conditions of approval for the project.

### **ACTION ITEMS & STAFF RECOMMENDATIONS**

Staff recommends approval of the **1041 Review application** with the following suggested conditions:

**Recommended Conditions of Approval (1041 Review only):**

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.
4. At the time of Final Plans Review submission, the plans shall be revised to include the following changes:
  - a. The transit center plans shall be amended to include offsets in the retaining walls of at least 12 inches every 50 feet.
  - b. Outdoor lighting fixtures shall not be mounted higher than 35 feet.
  - c. Update its traffic impact study to address the shortcomings identified by the Engineering Department.
  - d. The sidewalk along Wulfsohn Rd. adjacent to the transit center parcel shall be eight feet in width.
  - e. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
  - f. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.
  - g. The plans shall be revised to remove irrigation piping underneath Wulfsohn Road.
  - h. The landscaping plans shall be revised to meet all City and Glenwood Meadows landscaping standards, including parking area landscaping, street trees, and minimum rates of native and drought-resistant species.
  - i. The transit center building shall be adjusted to meet front setback requirements or shall receive approval through the Municipal Code's flexibility procedures.
  - j. The architectural plans for the transit center building shall be revised to incorporate at least two design elements from section V.D.2.c of the GMADA.
  - k. The retaining walls shall be revised to include offsets of at least 12 inches every 50 feet of retaining wall.
  - l. Revise plans to include mounting heights of outdoor light fixtures that do not exceed 35 feet in height.
  - m. All plans shall demonstrate compliance with City referral comments.

- n. The portion of the retaining wall north of the parking area that is shown encroaching on a utility easement shall be adjusted so that it does not encroach on the utility easement.
- 5. Prior to submitting a building and/or grading permit application, the owner shall:
    - a. Submit and receive approval of a Final Plans application in accordance with Municipal Code section 070.060.050(c).
    - b. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
    - c. Enter into a Development Agreement that memorializes the development approvals.
    - d. Provide all other permits from outside jurisdictions necessary for the project.
  - 6. Prior to issuance of the building permit, the applicant shall:
    - a. Provide evidence of approved and recorded land rights agreements with all involved property owners including the City of Glenwood Springs.
    - b. Obtain Right-of-Way Encroachment Licenses for all private uses or structures to be located within the right-of-way.
  - 7. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.
  - 8. Before commencement of construction, RFTA shall contribute funding to the actual construction cost of a roundabout at the western Midland Avenue/Wulfsohn Road intersection in a percentage amount equal to the average of RFTA's share of peak hour traffic volume increase at the intersection at the opening of the transit center and RFTA's share of peak hour traffic volume increase after the total Meadows buildout. Total Meadows buildout shall mean completion of RFTA's Phase 6A, 6B, and 8, and the completion of the multifamily project at Glenwood Meadows Lots 11C-B and 11C-C, commonly referred to as "BLD."
  - 9. RFTA shall pay a fair share of the upgrades to electrical infrastructure that will be necessary to accommodate the project and future development in the City. This share shall be established by a separate agreement between the City and RFTA.

**Suggested Findings for the 1041 Review:**

- (1) The health, welfare, and safety of the residents of this City will be protected and served.
- (2) The project is in general conformance with the Comprehensive Plan and other duly adopted plans and permit criteria.
- (3) The project is financially feasible.
- (4) The project is not subject to significant risk from natural hazards.

(5) The project will not have a significant adverse effect on the capability of local governments affected by the project to provide local infrastructure and services, or exceed the capacity of service delivery systems.

(6) The project will not have a significant adverse effect on the quality or quantity of recreational opportunities and experience.

(7) The project will not significantly degrade air quality.

(8) The project will not significantly degrade existing visual quality.

(9) The project will not significantly degrade surface water quality.

(10) The project will not significantly degrade groundwater quality.

(11) The project will not significantly degrade wetlands and riparian areas, terrestrial or aquatic plant or animal life.

(12) The project will not significantly deteriorate soils and geologic conditions.

(13) The project will not cause a nuisance.

(14) The project will not result in unreasonable risk of releases of hazardous materials.

(15) Urban development, population densities, and site layout and design of storm water and sanitation systems shall be accomplished in a manner that will prevent the pollution of aquifer recharge areas.

(16) The project shall be reasonably necessary to meet projected community development and population demands in the areas to be served by the project, or to comply with regulatory or technological requirements.

(17) The project shall be constructed in areas which will result in the proper utilization of existing facilities or systems to ensure the orderly and sustainable development of infrastructure in the City and adjacent communities.

(18) Economic impacts including, but not limited to, taxable property, licensed and permitted facilities, and recreation related to the proposed project have been identified and will be compensated for or mitigated.

(19) The project emphasizes the most efficient use of water, including the recycling, reuse, and conservation of water.

---

#### **LOCATION & EXTENT CRITERIA OF APPROVAL**

Per section 070.060.050 of the Municipal Code:

In reviewing a proposed Location and Extent application, the Planning Commission shall consider whether or not the proposed location and extent:

- i. Is consistent with the Comprehensive Plan and other City plans and policies;
- ii. Is consistent with the general purpose and intent of this Code; and
- iii. Minimizes adverse impacts to the health, safety, and welfare of the inhabitants of the surrounding areas and the city.

With the conditions of approval recommended in this report, Staff believes that these three criteria are met for the administration building and maintenance building.

Staff recommends approval of the **Location & Extent application** with the following suggested conditions:

**Recommended Conditions of Approval for Location & Extent Review:**

1. The development shall comply with the requirements of the Code. Any future physical changes or improvements to the property or buildings are subject to the review and approval of the Community Development Director for compliance with applicable requirements of the Glenwood Springs Municipal Code.
2. The applicant shall comply with all verbal representations made in the public hearings, as outlined in all application materials, and/or as revised per conditions herein and approved by the Community Development Director.
3. The applicant shall comply with recommendations identified in the technical reports submitted as part of the application including but not limited to geotechnical and drainage reports.
4. Prior to building permit review, the plans shall be revised to include the following changes:
  - a. Show required common open space and calculate its percentage of the administration building parcel.
  - b. Revise landscaping plan showing compliance with landscaping standards, streetscape standards, and parking area landscaping standards.
  - c. Provide mounting heights of outdoor light fixtures that do not exceed 35 feet in height.
  - d. Revise outdoor lighting plan to reduce estimated illumination levels to within allowed levels.
  - e. Reduce height of retaining walls to allowed limits and include methods such as terracing and screening wherever feasible to reduce the visual impact of these walls.
  - f. Add sidewalk width along Wulfsohn Rd. to plans. The minimum width shall be eight feet.
  - g. Revise administration building plans to comply with code requirements for maximum height.
  - h. A fire hydrant shall be installed on a landscaping island near the administration building.

- i. The stormwater detention plans, civil plans, and structural plans shall be revised in consultation with the geotechnical engineer to ensure compliance with the geotechnical report. The applicant shall provide a letter from the geotechnical engineer stating that the stormwater, civil, and structural designs of the transit center comply with the recommendations of the geotechnical report.
5. The drainage report and corresponding stormwater plans shall be revised to consider the impacts upon the culvert underneath Midland Avenue.
6. Prior to submitting a building and/or grading permit application, the owner shall:
  - a. Submit an Engineer's Estimate of all public improvements and provide security for completing said improvements per requirements of the Engineering Standards.
  - b. Provide all other permits from outside jurisdictions necessary for the project.
7. Prior to approval of a building permit, the Minor Subdivision Plat of Glenwood Springs Municipal Operations Center shall be amended and recorded removing all easements that conflict with the proposed maintenance building, if any conflict.
8. Prior to issuance of the Certificate of Completion, owner shall provide as-built plans and an Improvement Survey Plat per the Engineering Standards.
9. Before commencement of construction, RFTA shall contribute funding to the actual construction cost of a roundabout at the western Midland Avenue/Wulfsohn Road intersection in a percentage amount equal to the average of RFTA's share of peak hour traffic volume increase at the intersection at the opening of the transit center and RFTA's share of peak hour traffic volume increase after the total Meadows buildout. Total Meadows buildout shall mean completion of RFTA's Phase 6A, 6B, and 8, and the completion of the multifamily project at Glenwood Meadows Lots 11C-B and 11C-C, commonly referred to as "BLD."
10. RFTA shall pay a fair share of the upgrades to electrical infrastructure that will be necessary to accommodate the project and future development in the City. This share shall be established by a separate agreement between the City and RFTA.

**Suggested Findings for Location & Extent Review:**

- (1) The project is consistent with the Comprehensive Plan;
- (2) The project is consistent with the general purpose and intent of the Municipal Code; and
- (3) The project minimizes adverse impacts to the health, safety, and welfare of the inhabitants of the surrounding areas and the city.

MINUTES  
CITY OF GLENWOOD SPRINGS  
Planning and Zoning Commission

Regular Meeting  
December 17, 2024  
Council Chambers, First Floor  
101 W. 8TH STREET 6:00 PM

**1. Roll Call**

Present: Commissioners: Carolyn Cipperly, Amy Connerton, Pete Waller, John Houghton, Gregory Cowan, Connie Geiman

Also Present: Community Development Director Hannah Klausman, Senior Planner Watkins Fulk-Gray, Senior Planner Emery Ellingson, City Attorney Richard Peterson-Cremer

**2. Conflicts of Interest**

None

**3. Receipt of Minutes**

No minutes were received.

**4. Comments from citizens for items not appearing on the agenda**

No public comment was offered.

**5. New Items**

**a. Planning File 36-24 Residential Minor Site and Architectural Plan and Planning File #34-24 Preliminary Plat 619 Overlin Drive**

Planner Emery Ellingson presented Action Item 1: Planning File 36-24 Residential Minor Site and Architectural Plan and Action Item 1: Planning File #34-24 Preliminary Plat 614 Overlin Drive.

Staff recommend approval with findings and conditions in the staff report.

Commissioner questions, comments, and staff responses included the following:

- How will the neighboring property's driveway and access be affected? **Staff response:** Staff provided explained that there would be approximately 12' remaining for the access

of the neighboring property which was sufficient for a driveway. Staff also indicated that applicant was open to working with neighbor on what final access would look like.

- Question regarding removal of live vegetation. **Staff response:** Staff provided explained that removal of any living tree with caliper of greater than 14" would require approval by Community Development Director and Parks and Recreation Director.
- Question regarding building height. **Staff response:** Staff confirmed proposed heights of buildings were 25' and 32', both of which are within height limits of the RH Residential High Density Zoning District.
- Question regarding height transition requirements. **Staff response:** Staff explained the four methods for meeting height requirements and indicated that meeting this requirement was a condition of approval and that the applicant was actively working with staff to provide a design solution.
- Question regarding screening of transformer from public right of way. **Staff response:** Staff confirmed that if the transformer were to remain in the proposed location then the transformer would need to be screened with landscaping.
- How long has the area had been zoned as high-density residential zoning? **Staff response:** Staff explained that area had been zoned as high-density since at least 1998 and that existing multi-family buildings constructed in the 1970s seem to indicate the area has been zoned as high density residential for some time.
- Question regarding sidewalk fee-in-lieu option and sidewalk requirements. **Staff response:** Staff explained that Engineering preferred the sidewalk fee-in-lieu option because planning is underway for pedestrian improvements in the area.
- Question on clarification on when height transition is required and if distance from neighboring property had affect on requirement. **Staff response:** Staff explained that requirement is for adjacent properties and that distance from a smaller structure was not a factor in applying the design requirement.
- Question on how many existing multi-family developments currently exist in the neighborhood. **Staff response:** Staff did not have specific number of multi-family properties and provided broad description of neighborhood. Staff also pointed out the neighborhood was a mix of densities.
- Question on sound transmission assembly requirements for the project. **Staff response:** Staff clarified that sound transmission requirements of the International Residential Code would not apply to this project as the City has not adopted Appendix AK of the International Residential Code.
- Question on traffic study and how the numbers were calculated and if Engineering had reviewed and approved the findings **Staff response:** Staff confirmed that Engineering had reviewed and approved the findings of the traffic study and that the proposed volumes did not trigger any improvements per the City's current Engineering Standards.
- Questions on parking lot illumination. **Staff response:** Staff confirmed that the proposed lighting plan did not meet minimum requirements of Lighting District 2 and that a condition of approval was to revise the lighting plan to meeting the minimum parking lot illumination standards.

- Will the units be modular units? **Staff response:** Staff explained that applicant had indicated the homes were to be modular and that the applicant could confirm whether homes to be modular or stick built.

### **Applicant Comment:**

Applicants Ben West, Glenwood Springs and Roger Giard, Carbondale made a short presentation on the proposed development.

Commissioner questions, comments, and applicant responses included the following:

- Questions on common open space requirement and the areas indicated on the plan and what amenities would be offered in the common open space. **Applicant response:** Applicant explained that the common open spaces would have added amenities that would meet the requirements, most likely benches or garden areas that would provide passive recreation opportunities as opposed to active recreation such as playground equipment. Applicant explained that the square footage would be provided with exact details included later. Applicant also indicated that they had been working on some design revisions specific to this requirement.
- Questions on if eleven units were needed to make the project profitable and if applicant had considered removing a unit to obtain full amount of common open space without a fee-in-lieu. **Applicant response:** Applicant discussed trade off in eliminating a unit and benefits of an additional housing unit versus the amount of open space. Applicant also confirmed that they believed they could achieve the open space with the proposed site plan.
- Questions how parking would be managed and how it would meet parking demands of the development. **Applicant response:** Applicant confirmed they were meeting minimum parking requirements for development per standards of the Code. They also discussed that parking management could be addressed with the HOA. Applicant acknowledged that parking is a concern in the neighborhood and that there could be assigned parking within the property for the units.
- Questions if the development would be modular or stick built. **Applicant response:** Applicant explained that initial idea was to utilize modular housing but that after further review, applicant has decided to stick build the proposed buildings.
- Questions if applicant had made considerations for sound transmission between the units to minimize noise from railroad and neighboring units. **Applicant response:** Applicant explained that they have considered sound transmission and that the constructed units would have some form of sound protection in the construction.
- Questions on common open space requirements and if it needed to be passive or active. **Applicant response:** Staff confirmed that the area could be open to passive recreation and/or active.

- Questions on public noticing and notes from pre-neighborhood application meeting. Specifically, asking why the minutes from the pre-application meeting read that there were 26 parking spaces. Additional question on placement of public notice sign.  
**Applicant response:** Applicant explained that this was a typo in the minutes and that the proposed site plan which was shared with the neighborhood showed 20 parking spaces as required by Code. Applicant also explained that public noticing items which were done as required.

Commissioner Waller opened the item to public comment. Following members of the public provided comment:

Laurie Chase, Glenwood Springs provided comment on the following:

- Public notices not reaching the entire neighborhood
- Concerns for overflow parking and the City's current parking requirement of 1.5 spaces per unit not being sufficient.
- Concerns for increase in traffic to 8th Street, adding traffic to connection to Midland, and speed of traffic through the neighborhood.

Jim Richmond, Glenwood Springs provided comment on the following:

- Traffic and safety concerns regarding lack of pedestrian improvements in the neighborhood and increase in traffic from the neighborhood.

Gary Vick, Glenwood Springs provided comment on the following:

- Public notices not reaching the entire neighborhood, beyond the 300' required.
- Concerns for parking and its effect on the neighborhood, particularly the current requirement for 1.5 spaces per unit as opposed to 2 spaces per unit.

Commissioner Waller closed the item for public comment.

Commissioner Connerton made a motion to approve Action Item 1 for Planning File #36-24 Residential Minor Site and Architectural Plan. Commissioner Cipperly seconded the motion.

Discussion after the motion included:

- Discussion of parking demands upon the neighborhood, Code requirements for parking, and management of the on-site parking spaces.
- Common open space requirements and the common open space fee-in-lieu
- How the applicant will meet the height transition design requirement on the east side of Building B.
- Clarification that approval of the Site and Architectural Plan was not approving any variances and that recommending conditions of approval for height transition, common open space, parking lot lighting, and landscaping did not constitute variance approvals.
- Inclusionary zoning requirements for the project

- Snow storage

Staff also provided additional information related to items discussed.

Roger Giard, Applicant explained to the Commission that the 26 parking spaces in the minutes was a typo and that 20 spaces was the amount described at the pre-application neighborhood meeting.

Commissioner Waller called the item to question. Motion passed unanimously with a vote of 6-0.

Commissioner Cipperly motioned for approval of Action Item 1 for Planning File #34-24 Preliminary Plat with conditions described in the staff report. Commissioner Connerton seconded the motion.

Commissioner Waller called the item to question. Motion passed unanimously with a vote of 6-0.

#### **b. Planning File 21-24, Location & Extent Review and 1041 Review for Roaring Fork Transportation Authority (RFTA)**

Planner Watkins Fulk-Gray presented both action items, a Location & Extent Review and 1041 Review, for RFTA at 2302 and 2307 Wulfsohn Rd.

Staff recommends approval with findings and conditions in the staff report.

Commissioner questions, comments, and staff responses included the following:

- Clarification requested about a statement in the staff report that said “sidewalk width not provided.” **Staff response:** Fulk-Gray explained that the application materials did not state the width, but that it is required to be eight feet, and may currently meet code, but verification and detail is needed.
- Question how water would be delivered to the site. **Staff response:** RFTA will do the construction to get the water line to the site and then the City will take it over.
- How will pedestrian circulation work at the roundabout discussed for Wulfsohn and Midland. **Staff response:** The roundabout has not been designed yet, so many details are not known. Roundabouts are not ideal for pedestrians, but they can work and the City will make it work.
- Will the location of the current park’n’ride be the same location as the proposed one? **Staff response:** The new one will be much expanded but it is the same location.
- Will it be possible to make the landscaping compliant? **Staff response:** This will be a better question for the applicant. It should be possible meet most landscaping requirements, but the street trees may be challenging given the length of the bus platforms.
- Question about what the current construction project is near the site. **Staff response:** A new maintenance facility, bus barn, and fuel and wash are under construction or have been recently completed.

- Why are street trees required? **Staff response:** The City requires that 75% of all new plantings be native and drought resistant, and these plants, once they are established, can live on just the rainfall we get. The purpose of having street trees is for aesthetic reasons and to create a good environment for pedestrians.
- Question about the exterior lighting being out of compliance. **Staff response:** The conditions of approval require the lighting plan to be brought into compliance.
- Question about the GMADA. **Staff response:** It is similar to a PUD in that it is a separate set of zoning regulations, with City zoning as its base. It is an annexation and development agreement, and appended to it are zoning and design standards.
- Is this project the reason for needing to do electric system upgrades and the roundabout at the intersection. **Staff response:** The electric load is higher than the City believed it would be, so the peak load may increase 25% or 30% at worst case scenario. The infrastructure may need to be upgraded more than anticipated. The City has been looking at the Wulfsohn/Midland intersection for a year and a half and looked at other options such as signals, and landed on a double-lane roundabout. There is limited sight distance looking down the hill, so a roundabout is a safer situation. A full design is planned to happen next year. About \$2M to \$3M is budgeted in 2026 for the project.
- How close is the new transit center to the new large apartment buildings under construction? **Staff response:** About a quarter mile away.

#### Applicant Comments:

The applicant representative from RFTA, Ben Ludlow, introduced himself. The project has received federal grant funding. He displayed an overall site plan of RFTA's buildings and gave an overview of recent development, then displayed the current site plan for the transit center. He said they planned to move the We-Cycle station out of the right-of-way. He then displayed the site plan for the administration building and described its layout. The maintenance building, which is actually to be for parts storage, is next to the very large retaining wall.

Mr. Ludlow said the lighting plans meet or exceed Glenwood's lighting standards, though they do still receive complaints from residents. He said the priority is safety for employees and passengers, but that they will meet the lighting standards in the places where the photometric plans do not meet it.

He noted that RFTA does not have to follow the Location & Extent conditions of approval, but they prefer to follow them. Mr. Ludlow said the current proposal will not exceed the City's current capacity.

While not arguing that the intersection does not need a roundabout or improvements, Mr. Ludlow said that the transit center parcel falls within an exception that exempts them from having to contribute to the intersection improvements. He said that RFTA would resubmit their traffic study to accurately reflect their now-current RFTA buildout. He said he does not agree with the suggested condition of approval requiring RFTA to contribute toward funding the roundabout; however, he encouraged the City to come to the RFTA board to discuss participation.

Mr. Ludlow said that the tall retaining walls in phase 6B will not be visible behind their building. He said it will be very difficult to meet the street tree requirements given the needs of buses.

Comments to Applicant from Commissioners:

Question about the difference in current and proposed parking, and whether any alternative shading methods have been considered. Is overnight parking for Bustang users allowed?

**Applicant response:** Mr. Ludlow said that introducing water to this area is not something they want to do because of soil conditions. They prefer to not include plantings with their landscaping islands. There are mini shade structures in the waiting area. Doing solar on this site is not feasible because of the lack of sunlight. Geothermal is one green energy source they have considered at this site. The new project would add about 20 spaces. Parking is limited to 24 hours, and there are designated Bustang parking spaces.

Question about parking for trailers and overnight camping. **Applicant response:** No trailer parking is contemplated. The indoor waiting area will be open most of the day but not 24 hours.

Will this project cause any changes to the bus routes and if the electric buses will begin to serve more of the valley? **Applicant response:** More BRT service will be served at this location will be possible. It is difficult to use electric buses for longer routes, so right now the plan is not to run electric buses between Aspen and Glenwood.

Will Glenwood become RFTA's headquarters. **Applicant response:** RFTA has offices in many locations, and their goal is to get every department in one location.

How many employees would work out of the administration building and how many EV parking spots are at the park'n'ride and administration building? **Applicant response:** It is not known how many employees will work there. Two EV parking spaces will be roughed in at the park'n'ride and two at the administration building. They will not be installed until they receive future grant funding.

Does their grant funding include funding for the roundabout. **Applicant response:** No, only site work at the buildings.

Is the project fully funded and question about the timeline for the three phases. **Applicant response:** A Low/No Emission Grant and RAISE Grant and small DOLA grant are all in place. They hope to bid the project in the spring and start construction. Ideally, the project will be done in 2027.

What community amenities are to be provided? **Staff response:** A minimum "community amenity" area is required, but Staff considers that the shade structures and waiting area amenities can count for this.

What is the area of the snowmelt? **Applicant response:** I do not know, but the snowmelt system involves just a boiler.

Compliment of the 27<sup>th</sup> St. Station and question about if there is any possibility in the future for adding parking at the Phase 6A site. **Applicant response:** Mr. Ludlow said theoretically it is possible to convert the planned parking to structured parking.

Will motion sensor lighting be incorporated in the parking area. **Applicant response:** Yes, RFTA does this everywhere.

Comments from Assistant City Attorney Richard Peterson-Cremer

The applicant made Staff aware this morning of his position that the ADA exempts RFTA from having to contribute to the roundabout construction. He clarified that contributions to the roundabout are an “exaction,” not a “fee,” as the language of the ADA uses. The applicant made a request to remove the requirement to contribute to roundabout costs, and if this is so, he recommends continuing the items tonight. Fulk-Gray clarified that contribution to the project is a recommended condition of approval for both the Location & Extent and 1041 Review.

Mr. Langhorst said he has not provided a Can and Will Serve letter for electric service, so they could handle that by not providing service. Both of these projects will impact traffic and electric service beyond their respective lots. He said that an updated traffic report is needed.

In response to a question from Chair Waller about how to proceed, Mr. Peterson-Cremer recommended asking for any clarifications of the applicant now.

Mr. Ludlow said that the 1041 Review should not include the condition of approval requiring contribution to the roundabout project. Location & Extent conditions of approval do not have to be followed, but RFTA always tries to comply with them.

Mr. Peterson-Cremer reiterated his recommendation of continuing both the action items after opening public comment. He has not had any dialog with RFTA's counsel yet. Mr. Ludlow said he prefers approval tonight of the Location & Extent Review.

Commissioner Geiman asked for clarification for why RFTA could ignore Location & Extent conditions of approval. Mr. Peterson-Cremer explained that this process is based on state law, like 1041 Reviews, but 1041 Reviews have much more stringent regulations. Location & Extent conditions of approval can be overridden by the applicant's board, whereas 1041 Reviews cannot be.

Mr. Ludlow confirmed landscaping and roundabout contribution conditions are the only ones that have caused concern.

Comments from the Public

- No public was in attendance.

Commissioner Connerton asked if they have to make a motion to continue the items. Mr. Peterson-Cremer said that yes, and both items can be continued with one motion.

Commissioner Connerton made a motion to continue Action Items 1 and 2 to January 28, 2025. Commissioner Cowan seconded the motion. Motion passed unanimously with a vote of 6-0.

Commissioner Waller called the item to question. Motion passed unanimously with a vote of 6-0.

## **6. Commissioner Comments**

Commissioner Haughton said he is surprised that the most recent FEMA flood map is from 1985. Mr. Langhorst said all of Garfield County is undergoing floodplain review, but it takes a long time to change these maps and they are not finalized.

Commissioner Geiman said the parking standards are too low and not realistic. Ms. Klausman said that the parking standards were thoroughly reviewed in 2018 and are middle-of-the-pack compared to other cities. Parking is a tricky balance because of the need to provide parking for people's cars but also not creating parking lots everywhere. Some communities are abolishing parking minimums altogether. Mr. Peterson-Cremer noted that the State legislature considered has considered abolishing parking minimums for multifamily development.

Chair Waller thanked Staff. He suggested that a training for P&Z in March might be a good idea. He asked about the status of the City's new permitting system. Ms. Klausman described the purpose of having an electronic permitting system that will go live at the end of February.

## **7. Director Comments**

Community Development Director Hannah Klausman said that RFTA will be on the January agenda and there could be additional items.

## **8. Adjournment**

Meeting adjourned at 9:30 PM.

**MINUTES**  
**CITY OF GLENWOOD SPRINGS**  
**Planning and Zoning Commission**

Regular Meeting  
January 28, 2025  
Council Chambers, First Floor  
101 W. 8TH STREET 6:00 PM

**1. Roll Call**

Present: Commissioners: Joy White, Amy Connerton, Pete Waller, John Houghton, Gregory Cowan, Connie Geiman

Also Present: Community Development Director Hannah Klausman, Senior Planner Watkins Fulk-Gray, City Attorney Karl Hanlon.

**2. Conflicts of Interest**

None

**3. Receipt of Minutes**

Connerton moved to approve. Cowan seconded. White abstained. Unanimously approved.

**4. Comments from citizens for items not appearing on the agenda**

No public comment was offered.

**5. Continued Items**

**a. Planning File 21-24, Location & Extent Review and 1041 Review for Roaring Fork Transportation Authority (RFTA)**

Senior Planner Watkins Fulk Gray presented an update on the continued item for RFTA's new transit center, administration center, and maintenance building. He explained that the City has received a revised traffic report and reached confirmation on questions related to process of the 1041 application.

Some conditions of approval were modified. Roundabout for Wulfsohn and Midland intersection only applies to the 1041 review and not those phases reviewed under Location and Extent. Some transit center-specific conditions were moved to the Location & Extent section.

The City has received more information from our electrical consultants regarding our electric load. The results showed that the current electric load needs of the project fit within the City's current capacity and any future expansion of load will need to be reviewed and agreed upon at that time.

The traffic report condition was removed because it has been completed. The irrigation piping condition was removed because the City and RFTA came to an agreement on it. A new condition about road improvements has been included.

Staff recommend approval with conditions with findings in the staff report.

Commissioner questions, comments, and staff responses included the following:

- Why did some of the conditions move from the 1041 application process to the Location Extent process? **Staff response:** The Transit Center itself is the key component of the 1041 process. Items such as landscaping and parking lot design are not what makes the transit center, so have been moved to the L&E's conditions of approvals.
- ROW licensing questions. **Staff response:** ROW Encroachments are fairly typical and they are approved by City Council at a public hearing.
- Percentage of improvements to the roundabout and where is that based from? **Staff response:** It comes from the revised traffic report submitted by RFTA.
- Question on managing the irrigation underneath Wulfsohn. **Staff response:** The irrigation line would be underneath the street, the City is proposing taking control of that line to avoid complication seen elsewhere in the Meadows.
- Staggering of retaining walls, is that for an aesthetic purpose. **Staff response:** Mostly an aesthetic breaking up of expansive walls and is a regulation of the Meadows Zoning and Development Plan.
- Questions related to the height of retaining walls for the Location and Extent. **Staff response:** At the highest point, they are close to 11 feet. The reason for the condition is to acknowledge the steep slopes and tricky slopes and requesting they bring them down as much as possible.
- Does the staff recommend roundabout contributions to both 1041 and Location and Extent applications? **Staff response:** Only to the 1041 application. City Attorney Hanlon explained that the regulatory authority only exists within the 1041 application.
- Are building heights as proposed meeting regulations for the administrative building. **Staff response:** The admin building is about 48 feet tall and the limit is 40 feet. There are some allowances for screening, which this project does not quite fall into.
- Road improvements are only where the road is being disturbed or where the buses are stopping or making turning movements correct? **Staff response:** Yes.
- Questions on which applications are P&Z authority and which are Council authority. **Staff response:** Location and Extent is P&Z authority, and 1041 is Council authority.

**Applicant Comment:**

Applicant Ben Ludlow, RFTA Interim Capital Projects Manager made a short presentation on the proposed development. Dave Pesnichak, Chief Operating Officer RFTA, is also present.

Irrigation line under Wulfsohn is the raw water line owned by the City. That is what RFTA will use for an extension to the Administration building.

All ROW encroachments have been removed.

L&E for Admin Building, height has been corrected at 39 feet, mechanical screening is 41 feet so is no longer an issue.

Retaining walls are behind the building and not visible from the ROW. Building into the hillside requires higher walls and we want the 11 feet as shown.

Every 8 spaces requires a landscape island in the GMZDP for the transit center. RFTA would like flexibility there.

RFTA will be rebuilding Wulfsohn correctly to City specifications.

Condition 4a, 12 inches every 50 feet (GMZDP) RFTA would like to exceed the requirement on the north wall along Wulfsohn which is against the sewer force main, exceed the height requirement and forgo the 12-inch stepback.

5b on L&E, flexibility requested on street trees every 40 feet.

Louis Wilsher, Architect for RFTA. Showed street trees. Explained about sight distance requirements preventing more trees, RFTA wants to keep a 10 foot clear zone for stacking. RFTA is putting trees where possible. Trees that are included on the platform are numerous but do not meet the "Street Tree" definition of being within a planting strip.

Proposed condition for the roundabout based on 1.68% based on peak traffic in the Traffic Impact Study. RFTA is okay with finalizing that condition with Council from the more generic condition as listed for P&Z.

Commissioner questions, comments, and applicant responses included the following:

- Question on timeline for the project and construction. **Applicant response:** Applicant explained that in a perfect world the project would start in summer of 2025, but that is subject to grants and funding that is tied to federal funding. 3<sup>rd</sup> quarter of 2027 is initial schedule for completion.
- Question on rate of disturbance and if it will be happening all at the same time. **Applicant response:** Applicant explained that the plans indicate the limits of

disturbance. RFTA will be doing the transit center site and the admin building site at the same time so that will be the disturbance areas occurring at the same time.

- Question on semi-trucks getting hung up on roundabouts, and whether the buses will do the same. **Applicant response:** Applicant explained that buses don't have the same issue.
- Question on how the project will impact the Bustang and other services that occur at the transit location currently. **Applicant response:** Applicant explained that RFTA is setting up alternative sites for that temporarily.
- Question on how the parking lot is going to look without any trees or islands. **Applicant response:** There are some trees provided to break up the parking lot next to the stairways.
- Will the trees near Wulfsohn be in planters? **Applicant response:** No, those are standard street trees in the ground. The trees in the parking lot are landscaped islands so not planters. The raised planters are on the platform itself.
- Electrical upgrade changes. **Applicant response:** City Attorney explained that the timing of the buildout of the whole system will require possible future impacts and be addressed at that time.
- Is RFTA redoing all of Wulfsohn Rd or what section is being redone? **Applicant response:** Alex Jauch, Engineer for project illustrated the sections of the park and ride and turning areas that will be disturbed and then rebuilt to City standards. Adding turn lanes in various locations which will include replacement.
- Question on partial replacements and RFTA working with the City to make sure Wulfsohn Rd is built to standards. **Staff response:** The City and RFTA are working together on this to make sure that all sections RFTA is needing to repair are full repairs built to the specifications indicated by the City.

Commissioner Waller opened the item to public comment.

No public comment received.

Commissioner Waller closed the item for public comment.

Commissioner Connerton made a motion to approve action item 1, 1041 Application with findings and conditions included in the staff report. Commissioner Cowan seconded the motion.

- Staff pointed out that the offsets of the retaining wall is condition 4A in the 1041 conditions and explained that P&Z could amend the motion if they are okay with that.

Amendment to motion by Connerton to exclude condition 4A from the 1041 application and move to the L&E application. Commissioner Cowan seconds the amendment.

Discussion after the motion included: No further discussion.

**Commissioner Waller called the item to question. Motion passed unanimously with a vote of 6-0.**

Commissioner Connerton made a motion to approve action item 2, Location and Extent Application with findings and conditions included in the staff report with flexibility on condition 4b, street trees, and 5b parking lot landscaping for the transit center, 4a,e and 5a on the Location and Extension for retaining wall offsets. Commissioner Geiman seconded the motion

Discussion: Clarification on the retaining walls and where flexibility is being applied to height as well as offsets. Confirmed by staff.

Clarification on 4g, RFTA mentioned that they made changes to their building height so is this still necessary. Staff response: recommend keeping it.

**Commissioner Waller called the item to question. Motion passed unanimously with a vote of 6-0.**

## 1.0 Introduction

This traffic impact study is prepared using the guidelines of a Colorado Department of Transportation (CDOT) Level Three Traffic Impact Study (TIS) and will satisfy City of Glenwood Springs Engineering Standards Chapter 5.11 Traffic Impact Analysis Standards. This TIS provides an estimate for design hour traffic generation for the RFTA Glenwood Maintenance Facility (GMF) and adjacent Park and Ride lot proposed expansion which is planned to occur in phases.

This RFTA Phase 6A TIS updates the RFTA GMF Ultimate Buildout TIS dated September 20, 2023, also prepared by SGM and results from changes in the proposed land use while also addressing review comments associated with that TIS received from the City of Glenwood Springs, Watkins Fulk-Gray via email December 10, 2024. The methodology and basis for this study is generally consistent with the September 2023 TIS as reiterated herein.

The City has provided the Glenwood Meadows Master Traffic Study (GMMTS) prepared by Kimley-Horn (K-H) and dated January 2023. The GMMTS provides a comprehensive overview of the entire Meadows area, from the I-70 #114 interchange on the northwest to Midland Ave. and 8<sup>th</sup> Street and downtown to Grand Ave. and reviews 2022, 2030, and 2040 scenarios that include the overall Glenwood Meadows projected development and consideration of increased background traffic. The GMMTS included the development of the RFTA GMF and Park and Ride (Zone 5) in those scenarios based on RFTA programming obtained from the RFTA Regional Transit Center (RTC) Traffic Analysis prepared by Shrewsberry for RFTA dated March 2018. This TIS provides updated projections for the RFTA ultimate buildout scenario and substitutes the “Zone 5” 2018 RFTA traffic projections in the GMMT for the RFTA ultimate buildout traffic projections developed in this study.

The purpose of this study is to simulate the 2023 Baseline operational conditions from the GMMTS and provide the trip generation, distribution, and traffic assignment for the RFTA Phase 6A buildout programming. It will provide an analysis of the study intersections for safety and operational impacts.

The roadway network and study area are depicted in Figure 1. The existing RFTA parcel(s) straddle Wulfsohn Road on the west end near Midland Ave. The existing GMF is on the south side and Park and Ride (P&R) lot on the north side of Wulfsohn.

FIGURE 1 - STUDY AREA

The study intersections are as follows.

- Midland Ave. and Devereux Rd. (#3)
- Midland Ave. and West Wulfsohn Rd. (#4)
- Wulfsohn Rd. and RFTA GMF / P&R (#20)
- 8th and Colorado (#13)
- 9th and Colorado (#15)
- 9th and Grand (#16)

The study intersections are shown in Figure 2.

FIGURE 2 - STUDY INTERSECTIONS

## 1.1 Project Description

The RFTA GMF is located on the west end of Wulfsohn Road in Glenwood Springs, Colorado. The September 2023 TIS included phases 3/4/5/7 which were approved and constructed, but the land use had been revised and the constructed square footage of the operations center is provided below and revised in this analysis. The Phase 6A development of the site will also be included in this analysis. A summary of the development phases included in this study is outlined below, and overall site illustration is depicted in Figure 3.

- **Phase 3/4/5/7** - An increase from current operation to a 60-bus operation and a 9,647-sf new operations center as part of the previously approved and completed south side of Wulfsohn Road development.
- **Phase 6A** - Consists of the Transit Station (waiting and ticketing area) and an additional 22 Park and Ride spaces over the existing spaces provided.

FIGURE 3 - OVERALL SITE ILLUSTRATION

## 2.0 Methodology and Assumptions

This traffic impact study has been prepared in accordance with section 2.3(5) of the State Highway Access Code (SHAC) and the methodology and assumptions are provided in this section. The assumptions will provide a conservative analysis for the purposes of assessing operational and safety traffic impacts resulting from the proposed phased development.

This analysis uses HCM 6th Edition methodology and was performed using the Synchro 11 analysis package to estimate the capacity of the intersections. The MOE's that are compared for this study include LOS, delay and 95th percentile queue length. The MOE's will be reported for each analysis scenario to determine if the current intersections operate adequately. The 95<sup>th</sup> percentile queue length reported is based upon the average of ten 60-minute Simtraffic modeling runs.

**Previous Study Background** - SGM used the GMMTS for future Glenwood Meadows (GM) developed traffic (less RFTA Zone 5 traffic), distribution and assignment of future traffic, and growth factor beyond the GM developed traffic as presented in the GMMTS. The city has shared the GMMTS Synchro model to provide consistency with the previous modeling. Only the study intersection traffic volumes have been updated in the model. GM developed traffic volumes have been adjusted by subtracting the RFTA (Zone 5) volumes generated by the GMMTS. Updated RFTA Phase 3/4/5/7 and 6A buildout traffic volumes are generated in this study based on the development outlined in section 1.1 above.

**Baseline Traffic** - The City provided the 2023 GMMTS containing 2022 adjusted traffic volumes. New traffic counts performed by SGM on 4/25-26/2023 were completed for the following intersections:

- Midland and West Wulfsohn (7-9a; 4-6:30p)
- Wulfsohn and RFTA GMF / P&R (7-9a; 4-6:30p)
- 8th and Colorado (11a-1:30p; 4-6:30p)
- 9th and Colorado (11a-1:30p; 4-6:30p)
- 9th and Grand (11a-1:30p; 4-6:30p)

Baseline traffic counts were not adjusted using a seasonal factor based on CDOT count station on SH 82 in South Glenwood.

The GMMTS 2022 adjusted volumes, collected on a Thursday, were consistently greater than the Tuesday/Wednesday volumes collected by SGM. To normalize the 2023 SGM traffic volumes, a factor was established for each intersection to match the total intersection volume at each intersection counted by SGM as compared to the GMMTS 2022 adjusted volumes. The 2023 counted peak hour traffic volumes at the Wulfsohn / RFTA intersection were factored using the Midland / West Wulfsohn intersection.

### Analysis Years

Operational analysis of Baseline traffic (2025), 5-year Background and Developed traffic (2030), and 20-year Background and Developed traffic (2045) will be completed. The Background traffic scenarios include all area traffic *except for* the RFTA project generated traffic. The Developed traffic scenarios include the RFTA project generated traffic in addition to the Background traffic. The scenarios are summarized below.

- **Baseline Traffic (2025)** - The volumes for this scenario were calculated by applying an annual growth rate of 0.5% to the 2023 Baseline volumes outside the immediate

Glenwood Meadows travelshed - i.e. through traffic on Midland Ave, and downtown intersections.

- **Background Traffic (2030 and 2045)** - The volumes for these scenarios were calculated by applying the 0.5% annual growth rate to the volumes in the Baseline scenario, and then adding the Glenwood Meadows Developed Traffic (less RFTA traffic), as projected in the GMMTS
- **Total (2030 and 2045)** - RFTA Phase 3/4/5/7 and 6A buildout trip generation volumes were added to the 2030 and 2045 Background traffic scenarios above. Comparing the results of the Total traffic to the Background traffic will help to determine the extent of traffic impacts due to RFTA development.

The GMMTS provides a comprehensive overview of the entire Meadows area, and provides analysis for the 2022, 2030, and 2040 scenarios that include projected development and consideration of increased background traffic. The GMMTS assumes full buildout of Meadows in the 2030 scenario.

### Trip Generation Rates

The proposed trip generation for the development is described by phase and land use type below. Land use rates were developed from the ITE Trip Generation Manual, 11th Edition, unless noted otherwise.

- **Phase 3/4/5/7** - An increase from current operation to a 60-bus operation, which includes an increased bus schedule and associated staffing. Trip generation and volumes are based on the RFTA developed 60-bus program and are provided in Appendix F. 9,647 sf of new operations center use the General Office Building (Code 710) land use from ITE.
- **Phase 6A** - An increase of 22 Park and Ride spaces use Code 90.

TABLE 1 - TRIP GENERATION RATES

| Land Use                                  | Number of Units | ITE Code | Weekday Rate                                        | Design Hour Rates |             |            |         |             |            |
|-------------------------------------------|-----------------|----------|-----------------------------------------------------|-------------------|-------------|------------|---------|-------------|------------|
|                                           |                 |          |                                                     | AM Rate           | AM Entering | AM Exiting | PM Rate | PM Entering | PM Exiting |
| Ph3/4/5/7 - General Office Building (ksf) | 9,647           | 710      | 15.76                                               | 2.32              | 2.04        | 0.28       | 2.49    | 0.42        | 2.06       |
| Ph3/4/5/7 - 60 Bus expansion              |                 | *        | * based on RFTA 60-bus projections (by RFTA 6/2023) |                   |             |            |         |             |            |
| Ph6A - Park and Ride                      | 22              | 90       | 5.77                                                | 1.09              | 0.87        | 0.22       | 0.64    | 0.16        | 0.48       |

TABLE 2 - TRIP DISTRIBUTION

|                         | ITE Code | Basis of Rate                                       | Time Period Used Above    | Weekday Design Hour Distribution |        |       |        |
|-------------------------|----------|-----------------------------------------------------|---------------------------|----------------------------------|--------|-------|--------|
|                         |          |                                                     |                           | AM IN                            | AM OUT | PM IN | PM OUT |
| General Office Building | 710      | Fitted Curve                                        | Peak Hour adjacent Street | 88%                              | 12%    | 17%   | 83%    |
| 60 Bus expansion        | *        | * based on RFTA 60-bus projections (by RFTA 6/2023) |                           |                                  |        |       |        |
| Park and Ride           | 90       | Fitted Curve                                        | Peak Hour adjacent Street | 80%                              | 20%    | 25%   | 75%    |

### Design Hour Volume

The design hour volumes calculated in this study are based upon the peak hour of the adjacent street traffic for the proposed development land use types. The design hour volume used in this study is estimated to be the 30<sup>th</sup> highest hourly volume of the design year.

### Trip Reductions

Multi-modal trips could consist of walking, biking, car-pooling and transit options. The proximity of the RFTA GMF to the Park and Ride lot and as the hub of the Colorado River

and Roaring Fork valleys transit network makes the location convenient for all transportation modes.

Glenwood Springs is an area known for hiking and biking, along with that comes increased percentages of valley residents who use those modes of transportation for commuting and other trips that typically would have been taken with vehicles. The typical US average walking and biking distance for a commute or other trip is 0.25 miles and 3 miles, respectively. With more prevalent use of alternative transportation in the region, it would be reasonable to assume those distances are increased in the area. The Glenwood Meadows mixed use area is within walking and biking distance from the site.

Given the multi-modal opportunities, a 10% reduction in trips associated with future employees (Operations Center) is conservatively applied and summarized below.

- Phase 3/4/5/7 - 10% transit reduction applied to office
- Phase 6A - No transit reduction applied to the Park and Ride.

### Project Traffic Distribution

RFTA trip distribution is based on 2023 traffic distribution at project intersection for each leg with consideration given to GMMTS assumptions (90% oriented westerly / 10% oriented easterly). The Bus distribution is based on future RFTA programing.

## 2.1 Intersection Capacity Analysis

AM and PM level of service estimates were prepared in accordance with the Highway Capacity Manual 6<sup>th</sup> Edition (Transportation Research Board, 2016). For signalized intersections, the HCM measures level of service in terms of seconds of delay per vehicle. This is also a measure of driver discomfort, fuel consumption, and lost travel time. The table below relates the LOS to seconds of delay per vehicle at a signalized intersection.

**TABLE 3 - LEVEL OF SERVICE (LOS) CRITERIA SIGNALIZED INTERSECTIONS**

| Level of Service | Delay (seconds) |
|------------------|-----------------|
| A                | < 10.0          |
| B                | 10.1 to 20      |
| C                | 20.1 to 35      |
| D                | 35.1 to 55      |
| E                | 55.1 to 80      |
| F                | > 80.0          |

Source: *Highway Capacity Manual*, 2016

For unsignalized intersections, the Highway Capacity Manual defines level of service and delay in terms of seconds of stopped delay per vehicle, which is based on the number of acceptable gaps in the conflicting traffic stream. In general, the traffic movements analyzed are those controlled by stop signs or yield signs, and the left turn movements from the uncontrolled major street. The following table represents the level of service criteria for unsignalized intersections:

TABLE 4 - LEVEL OF SERVICE (LOS) CRITERIA UNSIGNALIZED INTERSECTIONS

| Level of Service | Delay (seconds) |
|------------------|-----------------|
| A                | < 10.0          |
| B                | 10.1 to 15      |
| C                | 15.1 to 25      |
| D                | 25.1 to 35      |
| E                | 35.1 to 50      |
| F                | > 50.0          |

Source: *Highway Capacity Manual*, 2016

The “overall” intersection level of service at a signalized or an unsignalized intersection corresponds with the average delay experienced on the minor street approaches and the uncontrolled major street movements. The unconflicted major street through movements are considered to have no delay. Because most of the intersection movements are major street movements with no delay, the overall intersection results in a LOS with less delay than the minor street approaches and conflicting major street movements (left turns) experience.

In general, CDOT and the City consider the overall intersection operation of LOS “D” or better acceptable during the peak hours. The goal is to also provide a similar LOS for each controlled intersection movement and/or approach.

This study will assess the operational measures of effectiveness (MOE’s) including Level of Service (LOS), Delay, and 95<sup>th</sup> percentile queue. The MOE analysis by movement provides an overview of all intersection approaches and conflicting movements and provides a more realistic picture of operations by controlled movement or approach as experienced and perceived by users. The MOE’s also provide a valuable reference point for comparison of LOS, Delay and Queue between scenarios.

### 3.0 Baseline Traffic Conditions (2025)

#### 3.1 Existing Roadways and Intersections

Roadway and intersection descriptions provided in the GMMTS are accurate at the time of this study and are provided in the Appendix. The GMMTS Synchro model is the basis for this study and serves to replicate the 2022 results from the GMMTS to provide a comparative baseline to understand potential impacts with the addition of the Background, RFTA, and GM traffic volumes.

#### 3.2 Baseline Intersection Capacity Analysis

Using the Baseline traffic volumes provided in Appendix A the capacity analysis was modeled in Synchro to estimate level of service and delay for each intersection.

Table 5 shows the overall results of the capacity analysis for the intersections in the study area. The study intersections operate at an acceptable overall LOS C or better under baseline conditions.

The MOE's, LOS, delay (seconds) and 95th percentile queue lengths (feet) by approach movement are also presented in Table 5 and provide a reference point of 2025 Baseline traffic conditions to understand the effect of growth unrelated to the proposed development provided in the 2030 Background traffic volumes. All but Grand Ave side street approach movements operate at an acceptable LOS D or better under baseline conditions. 9<sup>th</sup> Street approach movements operate at LOS E or worse during the PM peak hour.

Queuing is reported for each approach movement at the study intersections to provide another indication of intersection performance. A queue length of 20 ft represents a single vehicle. Highlighted queue lengths indicate that the queue length exceeds the link or storage bay distance and is depicted in the following MOE tables as shown below.

\*95th percentile queue exceeds link distance

\*95th percentile queue exceeds storage bay distance

\*\*Modeled link distance differs from actual link distance

The Baseline scenario shows results with 95<sup>th</sup> percentile queue lengths well below or near existing storage bay or link lengths, except for the NB Through movement, the EB, and the WB Left Turn movements at the 9<sup>th</sup> and Grand intersection during the PM design hour.

TABLE 5 - BASELINE - OVERALL LOS AND MOE BY MOVEMENT SUMMARY

| Intersection                          | Approach Movement |    | Link/Storage Bay Distance (L_T_R) | 2025 Baseline |               |     |       |                  |     |
|---------------------------------------|-------------------|----|-----------------------------------|---------------|---------------|-----|-------|------------------|-----|
|                                       |                   |    |                                   | Overall LOS   | Overall Delay | LOS | Delay | 95th % Q (L_T_R) |     |
| #3 Midland Ave. and Devereux Rd.      | SEB L             | AM | 100                               | A             | 0.8           | A   | 8.2   | 42               |     |
|                                       |                   | PM |                                   | A             | 1.6           | B   | 10.5  | 45               |     |

1 – Delay expressed as average delay per vehicle in seconds/vehicle

## 4.0 Background Traffic (2030 and 2045)

The Baseline 2025 traffic volumes were used as a basis to develop the 5-year and 20-year Background (2030 and 2045) traffic volumes. The Midland Ave through movements and the intersections in the downtown area were adjusted using a 5-year growth factor of 1.025 and a 20-year growth factor of 1.105. No growth factor was applied to the project intersection on Wulfsohn Rd. The GMMTS assumed that the Glenwood Meadows development would be completed by 2030. Therefore, SGM includes the projected Glenwood Meadows traffic in these background scenarios.

### 4.1 Background Intersection Capacity Analysis

Using the 2030 and 2045 Background traffic volumes, the capacity analysis was modeled in Synchro to determine level of service and delay for each intersection. The 2030 and 2045 Background traffic volumes are provided in Appendix A.

#### 4.1.1 2030 Background Traffic

Table 6 shows the overall results of the capacity analysis for the study intersections. The study intersections operate at an overall LOS C or better, except for Midland Ave and Wulfsohn Rd, which degrades to LOS D and E in the AM and PM peak hours, respectively.

MOE analysis is also presented in Table 6 and provides an overview of intersection approach movements for 2030 Background traffic conditions for comparison to 2025 Baseline traffic conditions to understand the effect of background traffic volumes. Similar to the 2025 Baseline scenario, the Grand Ave side street approach movements operate at LOS E or worse during the PM peak hour. The NB Wulfsohn Rd approach to Midland also degrades to LOS E during the PM design hour due to the increased background Midland through traffic and the additional volume on Wulfsohn Rd from the Glenwood Meadows development.

Overall, the approach movement queue lengths increase slightly from Baseline to Background volumes. The most significant increase occurs at the Midland Ave and Wulfsohn Rd intersection, where the queue on the NB approach exceeds the length of the link to the Wulfsohn Rd and RFTA intersection, which results in a long queue on the WB approach to the study intersection. Additionally, the EB right movement at Midland Ave and Wulfsohn Rd exceeds the existing storage bay distance. The 9<sup>th</sup> Street approaches continue to have poor LOS and increased queuing.

TABLE 6 - 2030 BACKGROUND - OVERALL LOS AND MOE BY MOVEMENT SUMMARY

1 – Delay expressed as average delay per vehicle in seconds/vehicle

#### 4.1.2 2045 Background Traffic

Table 7 shows the overall results of the capacity analysis for the study intersections. Again, the study intersections operate at an overall LOS C or better, except for Midland Ave and Wulfsohn Rd, which degrades to LOS E and F in the AM and PM peak hours, respectively, but the overall LOS of this intersection remains the same compared to the 2030 scenario.

MOE analysis is also presented in Table 7 and provides an overview of intersection approach movements for 2045 Background traffic conditions for comparison to 2030 Background traffic conditions to understand the effect of background traffic growth. The Grand Ave side street approach movements degrade slightly compared to the 2030 scenario. The NB and SB delays on Wulfsohn Rd increase significantly compared to the 2030 scenario. The SWB approach to the Midland Ave and Devereux Rd intersection also degrades to LOS D and E in the AM and PM peak hours respectively.

Overall, the approach movement queue lengths remain do not change significantly compared to the 2030 Background traffic scenario.

TABLE 7 - 2045 BACKGROUND - OVERALL LOS AND MOE BY MOVEMENT SUMMARY

| Intersection                          | Approach Movement |    | Link/Storage Bay Distance (L_T_R) | 2030 Background |               |     |       |                  | 2045 Background |               |     |       |                  |

1 – Delay expressed as average delay per vehicle in seconds/vehicle

## 5.0 Total Traffic (2030 and 2045) - RFTA Phase 3/4/5/7 and Phase 6A

### 5.1 Project Intersection

The RFTA GMF, P&R, and the project intersection (#20) are shown in Figure 4 below.

FIGURE 4 - RFTA GMF / PARK AND RIDE INTERSECTION WITH WULFSOHN ROAD

### 5.2 Project Access Trip Generation and Assignment

Using the trip generation rate and distribution assumptions provided in 2.0 Methodology the resulting trip generation by land use for Phase 3/4/5/7 and Phase 6A is provided in Table 8. Table 8 also applies the 10% trip reduction factor and presents the reduced traffic volumes.

TABLE 8 - ACCESS DESIGN HOURLY VOLUME BY LAND USE

| Land Use                                   | Number of Units | Weekday Traffic | Weekday Design Hour Traffic |           |           |           |

### 5.3 Intersection Capacity Analysis

The Total traffic volumes for 2030 and 2045 are shown in Appendix A. The scenarios were modeled in Synchro and the results are presented below.

#### 5.3.1 2030 Total Traffic

Table 9 shows the overall LOS results of the capacity analysis for the study intersections for the 2030 Total traffic scenario. The study intersections operate at an overall LOS C or better, except for the Midland Ave and Wulfsohn Rd which degrades to LOS E and LOS F in the AM and PM peak hours, respectively.

MOE analysis is also presented in Table 9 and provides an overview of intersection approach movements to understand the effect of 2030 Total traffic volumes compared to the 2030 Background traffic. All intersection approach movements operate at LOS C or better except for those highlighted in the table; further summary is provided below.

##### **Wulfsohn Rd. and RFTA / P&R (#20)**

The project intersection operates at overall LOS A and all approach movements operate at LOS C or better in both scenarios. Expected 95<sup>th</sup> percentile queue lengths are within existing storage lengths. However, the modeled lengths are affected by the large queue length at the Wulfsohn Rd. approach to the Midland Ave. intersection.

##### **Midland Ave. and Devereux Rd. (#3)**

The SWB approach degrades to LOS D (E) in the 2030 Total scenario due to a slight increase in delay at the LOS interval threshold. However, the overall LOS for the intersection remains acceptable, and there are no negative impacts from the increased 95<sup>th</sup> percentile queue lengths.

##### **Midland Ave. and Wulfsohn Rd. (#4)**

The NB approach operates at LOS F (F) in the 2030 Background scenario. The 2030 Total traffic does increase the delay for this movement. The 95<sup>th</sup> percentile queue analysis generally shows increases across all approaches, compared to the 2030 Background scenario. The addition of the RFTA Total traffic grows the SB Right Turn queue length to 37 (76) ft, which exceeds the storage length in the PM peak hour.

##### **8<sup>th</sup> St. and Colorado Ave. (#13)**

The delays at this intersection increase from 2030 Background to 2030 Total scenario, but the LOS remains the same for each movement. However, the 95<sup>th</sup> percentile queuing analysis shows that the queue lengths on the EB approach exceed the length of the link from the intersection to Grand Ave.

##### **9<sup>th</sup> St. and Grand Ave. (#16):**

In the 2030 Background scenario, the EB and WB approach movements operate at LOS E or worse during the PM peak. The addition of the 2030 Total traffic degrades the operation slightly, and causes the EB Thru/Right movement to degrade to LOS F. However, the increase in delays is small, and the intersection still maintains an acceptable overall LOS A (C). The 95<sup>th</sup> percentile queue analysis indicates that the NB Left Turn exceeds the existing storage lengths with the addition of the 2030 Total traffic over the 2030 Background scenario.

TABLE 9 - 2030 TOTAL - OVERALL LOS AND MOE BY MOVEMENT SUMMARY

| Intersection                          | Approach Movement |    | Link/Storage Bay Distance (L_T_R) | 2030 Background |               |     |       |                  | 2030 Total (6A) |               |     |       |                  |

1 – Delay expressed as average delay per vehicle in seconds/vehicle

### 5.3.2 2045 Total Traffic

Table 10 shows the overall LOS results of the capacity analysis for the study intersections for the 2045 Total traffic scenario. The study intersections operate at an overall LOS C or better (or LOS D or better in the downtown core), except for the Midland Ave and Wulfsohn Rd which operates at LOS E and LOS F in the AM and PM peak hours, respectively, but does not change compared to the 2045 Background scenario.

MOE analysis is also presented in Table 10 and provides an overview of intersection approach movements to understand the effect of 2045 Total traffic volumes compared to the 2045 Background traffic. All intersection approach movements operate at LOS C or better (or LOS D or better in the downtown core), except for those highlighted in the table; further summary is provided below.

#### **Wulfsohn Rd. and RFTA / P&R (#20)**

The project intersection operates at overall LOS A and all approach movements operate at LOS C or better in both scenarios. Expected 95<sup>th</sup> percentile queue lengths are within existing storage lengths. However, the modeled queue lengths are affected by the queuing on the NB approach to the Midland Ave and Wulfsohn Rd intersection.

#### **Midland Ave. and Devereux Rd. (#3)**

The SWB approach operates at LOS D (E) in the 2045 Background scenario. With the addition of the 2045 Total traffic, the delays increase slightly, but there are no changes to the LOS. The overall LOS of the intersection remains acceptable, and there are no negative impacts from the 95<sup>th</sup> percentile queue lengths.

#### **Midland Ave. and Wulfsohn Rd. (#4)**

The NB approach operates at LOS F (F) in the 2045 Background scenario. The 2045 Total traffic does increase the delay for this movement.

#### **8<sup>th</sup> St. and Colorado Ave. (#13)**

The EB and WB approaches degrade to LOS D in the PM peak hour. However, this LOS is deemed acceptable by CDOT and the City of Glenwood Springs for Grand Ave / SH 82 corridor. The 95<sup>th</sup> percentile queue analysis shows that the length of the queue on the EB approach exceeds the length of the link from the intersection to Grand Ave.

#### **9<sup>th</sup> St. and Grand Ave. (#16):**

In the 2045 Background scenario, the EB and WB approach movements operate at LOS E or worse during the PM peak. The addition of 2045 Total traffic degrades the operation slightly, but the increase in delays is small, and there is no change to the LOS for any movements. The intersection still maintains an acceptable overall LOS B (C). The 95<sup>th</sup> percentile queue analysis indicates that the WB and EB left turns exceed the existing storage lengths in both the 2045 Background and 2045 Total scenarios. The addition of the Total traffic causes the NB left turn queue to exceed the existing storage length to a minor extent in both AM and PM peak hours.

TABLE 10 - 2045 TOTAL - OVERALL LOS AND MOE BY MOVEMENT SUMMARY

| Intersection                          | Approach Movement |    | Link/Storage Bay Distance (L_T_R) | 2045 Background |               |     |       |                  | 2045 Total (6A) |               |     |       |                  |
|---------------------------------------|-------------------|----|-----------------------------------|-----------------|---------------|-----|-------|------------------|-----------------|---------------|-----|-------|------------------|

1 – Delay expressed as average delay per vehicle in seconds/vehicle

## 5.4 Total Traffic Auxiliary Turn Lane Analysis

Auxiliary turn lane requirements for access to Colorado State Highways and many local roadways are determined using the State Highway Access Code (SHAC) and based on the projected DHVs, the speed limit and geometry of the highway adjacent to the access, and the classification of the highway. The City uses the SHAC as the standard for determining the need for auxiliary lanes.

### 5.4.1 Wulfsohn Rd. and RFTA GMF/Park and Ride (#20)

For design purposes, the speed limit of Wulfsohn Rd. adjacent to the project is 25 mph in both directions.

Based on the SHAC 3.12 for a Category NR-C - Non-Rural Arterial, auxiliary turn lanes shall be installed according to the criteria below:

- a. A left turn lane with taper and storage length is required for any access with a projected peak hour left ingress turning volume greater than 25 vph. No deceleration length is required.
  - o *WB left volume 21 vph (35 PCEs) - Lane warranted*
  - o *EB left volume 15 vph - Lane not warranted*
- b. A right turn deceleration lane and taper length is required for any access with a projected peak hour right ingress turning volume greater than 50 vph. No deceleration length is required.
  - o *WB right volume: 33 vph - Lane not warranted*
  - o *EB right volume: 14 vph - Lane not warranted*

TABLE 11 - RFTA GMF / WULFSOHN INTERSECTION AUXILIARY LANE REQUIREMENTS

| Auxiliary Lane<br>(12 ft width) | Existing Condition<br>Storage (taper) (ft) | Standard Code Design<br>Storage (taper) (ft) | DHV<br>(vph/PCE) | Posted<br>Speed<br>(mph) | Storage<br>required<br>(ft) | 95th % Q<br>(ft) |
|---------------------------------|--------------------------------------------|----------------------------------------------|------------------|--------------------------|-----------------------------|------------------|
| WB Left Turn                    | -                                          | 50 + (90)                                    | 21/35            | 25                       | 50                          | 1564*            |

\*The result of queuing effect of Wulfsohn intersection with Midland

### 5.4.2 Midland Ave. and Wulfsohn Rd. (#4)

For design purposes, the speed limit of Midland Ave. at the intersection with Wulfsohn Rd. is 25 mph in both directions.

Based on the SHAC for a Category NR-C - Non-Rural Arterial, auxiliary turn lanes shall be installed according to the criteria below:

- a. A left turn lane with taper and storage length is required for any access with a projected peak hour left ingress turning volume greater than 25 vph. No deceleration length is required.
  - o *WB left volume 7 vph (9 PCEs) - Lane not warranted*
  - o *EB left volume 40 vph - Lane warranted*
- b. A right turn deceleration lane and taper length is required for any access with a projected peak hour right ingress turning volume greater than 50 vph. No deceleration length is required.
  - o *WB right volume: 43 vph - Lane not warranted*
  - o *EB right volume: 173 vph - Lane warranted*

TABLE 12 - MIDLAND / WULFSOHN INTERSECTION AUXILIARY LANE REQUIREMENTS

| Auxiliary Lane<br>(12 ft width) | Existing Condition<br>Storage (taper) (ft) | Standard Code Design<br>Storage (taper) (ft) | DHV<br>(vph/PCE) | Posted<br>Speed<br>(mph) | Storage<br>required<br>(ft) | 95th % Q<br>(ft) |
|---------------------------------|--------------------------------------------|----------------------------------------------|------------------|--------------------------|-----------------------------|------------------|
| EB Left Turn                    | 95 + (70)                                  | 50 + (90)                                    | 40               | 25                       | 50                          | 35               |
| EB Right Turn                   | 25 + (75)                                  | 175 + (90)                                   | 173              | 25                       | <b>50</b>                   | 49               |
| WB Left Turn                    | 95 + (70)                                  | 50 + (90)                                    | 7/9              | 25                       | 50                          | 27               |

The existing EB Left Turn storage bay distance of 95 ft. is sufficient. The existing EB Right Turn storage bay has a length of 25 ft and requires at least an additional 25 ft. to hold the project 95<sup>th</sup> percentile queue.

The State Access Code gives the following design parameters for tapers:

- All redirect tapers within a 25-mph speed zone should have a taper rate of 15:1
- All lane tapers within a 25-mph speed zone should have a taper rate of 7.5:1.

### 5.5 Wulfsohn Rd. and RFTA GMF/Park and Ride - Access Assessment

The existing project intersection is a two-way stop-controlled intersection with Wulfsohn Road uncontrolled and stop signs on the north and south approaches. This access lies within a tangent section of Wulfsohn Road. Both the NB and SB approaches can provide adequate entering sight distance for a Multi-Unit Truck and Bus, with available sight distance of 425 ft based on the 25-mph posted speed. Consideration needs to be given to the street trees on the south side of Wulfsohn to maintain vision for NB traffic through the required sight triangle. The 85<sup>th</sup> percentile speed on west Wulfsohn as reported in the GMMTS is approximately 35 mph and would require an entering sight distance of 595 ft. The SB approach provides this additional sight distance. The NB approach can provide a maximum distance of 475 ft with attention to tree trimming within the sight triangle of the street trees on the south side of Wulfsohn Road, sight distance beyond that is limited by the horizontal and vertical roadway geometry. Photographs of the existing access conditions are provided below.

FIGURE 5 - RFTA GMF NB APPROACH AT WULFSOHN ROAD (W / E)

FIGURE 6 - RFTA P&R SB APPROACH AT WULFSOHN ROAD (E / W)

The buildout of the RFTA GMF will result in an increase in both vehicular and pedestrian volumes at the Wulfsohn Road project intersection. The CDOT Pedestrian Crossing Guidelines provide guidance for the installation of crosswalks and appropriate treatments based on location, volumes, and roadway type.

Based on the future vehicular traffic on Wulfsohn Road, up to 5000 ADT, and increased pedestrian volumes with the addition of the administration building and park and ride expansion, the installation of a pedestrian crosswalk is recommended. The painted crosswalk should be located on the west side of the Wulfsohn Road intersection as shown in Figure 7. The crosswalk should be installed with warning signage per the MUTCD consisting of a W11-2 pedestrian crossing sign with a W16-7p plaque mounted on the side of the roadway at the crosswalk location and a W11-2 advanced pedestrian warning sign. Guidelines and calculations are provided in the Appendix.

FIGURE 7 - RFTA P&R / GMF AT WULFSOHN ROAD - PEDESTRIAN CROSSING

## 5.6 State Highway Access Permit Evaluation

Based on the SHAC, an access permit is required when a change of greater than 20% occurs when accessing a state highway. Because there is not an existing permit for I-70 Exit #114, CDOT has directed to use the 2022 Existing Adjusted traffic volumes from the K-H

GMMTS as the permit threshold, those PCE volumes are calculated in Appendix F shown in Table 13. The table also presents the percentage of DHV added to the Exit #114 Interchange by the RFTA Total Traffic scenario, the RFTA total traffic falls below the 20% threshold that requires a CDOT Access Permit.

TABLE 13 - RFTA DHV AND 2022 I-70 DHV %

| RFTA                            | HOUR | DHV      | % 2025 DHV |
|---------------------------------|------|----------|------------|
| Total Traffic<br>(3/4/5/7 + 6A) | AM   | 102      | 7.5%       |
|                                 | PM   | 90       | 6.0%       |
|                                 |      |          |            |
|                                 |      | 2022 DHV |            |
|                                 |      | AM       | 1,359      |
|                                 |      | PM       | 1,493      |

## 5.7 Total Traffic - Summary of Conclusions

The analysis of the Background and Total traffic in 2030 and 2045 presented above results in the following conclusions.

- The degradation of LOS and Queuing at the Midland and Wulfsohn intersection is partially the result of the proposed RFTA traffic.
- Improvement of the Midland and Wulfsohn intersection is recommended considering the 2030 Background 2030 Total traffic at the NB approach will degrade to LOS E/F with excessive queue lengths.
- The RFTA traffic volumes warrant a WB left turn lane from Wulfsohn to the RFTA GMF access driveway.
- The development of the additional park and ride spaces should include a design for a two-lane SB approach to Wulfsohn Road to help alleviate potential SB queuing issues across the existing transit station and park and ride lot access aisle.
- At the NB approach to Wulfsohn, RFTA should work with the City to trim and/or remove trees to provide the maximum sight distance possible with existing geometric limitations (~475 ft).
- At the west side of the Wulfsohn Road project intersection, a painted crosswalk should be installed with warning signage per the MUTCD consisting of a W11-2 pedestrian crossing sign with a W16-7p plaque mounted on the side of the roadway at the crosswalk location and a W11-2 advanced pedestrian warning sign.
- The RFTA Total traffic does not trigger a CDOT Access Permit at Exit 114

## 6.0 Transportation Demand Management Strategies

Transportation demand management (TDM) is a set of strategies designed at maximizing traveler choices. *Managing demand is about providing travelers, regardless of whether they drive alone, with travel choices, such as work location, route, time of travel and mode. In the broadest sense, demand management is defined as providing travelers with effective choices to improve travel reliability.*<sup>1</sup>

RFTA is in the TDM business. The expansion of the GMF is a primary strategy to help provide future travelers more choices with expanded schedule, reduced travel times, and reliability. The approach to adding office space and additional park and ride spaces at this transit hub centered in the service valleys is an effective land-use strategy. The planned

development adjacent to several recent Meadows housing opportunities will serve to provide additional choices for live / work location for management, maintenance, and driver employees, while also serving to reduce vehicle miles traveled and trips. Both have benefits of reducing overall pollutants caused by vehicle emissions.

<sup>1</sup>FHWA, Mitigating Traffic Congestion-The Role of Demand-Side Strategies, prepared by ACT, Report No. FHWA-HOP-05-001, October 2004.

## 7.0 Conclusions and Proposed Mitigation Measures

### 7.1 Summary of Conclusions

- Overall, the Transit Center development project serves to reduce vehicle volumes by implementing a more robust transit system for the Colorado and Roaring Fork River valley corridors. Additional buses in the system and the park and ride spaces facilitate that primary goal.
- The Midland and Wulfsohn intersection will need improvement to accommodate the 2030 Background (inc. Glenwood Meadows) and 2030 Total (inc. RFTA) traffic volumes. In terms of percentages, the RFTA Phase 6A share of the volume at Midland and Wulfsohn intersection based on PCEs is as follows.
  - 2025 Baseline DHV - 1.68% AM / 1.05% PM
  - 2030 Background DHV - 1.37% AM / 0.83% PM
  - 2045 Background DHV - 1.30% AM / 0.79% PM
- The RFTA Total traffic does not trigger a CDOT Access Permit at Exit 114
- Except for the Midland and Wulfsohn and project access intersection, the remaining study intersections will operate not significantly worse than baseline condition or acceptably in their existing configurations considering the RFTA Total traffic.

### 7.2 Proposed Mitigation Measures

- Depending on the timing of potential Midland and Wulfsohn intersection improvements being implemented, consideration should be given to extending the existing EB right turn lane an additional 25 ft, for a total of 50 ft.
- The City has confirmed using an alternative and operational analysis that a two-lane roundabout is the preferred design alternative to improve the Midland Avenue and Wulfsohn Road intersection
- RFTA should provide for a WB left turn lane from Wulfsohn to the RFTA GMF access driveway.
- The RFTA development of the additional park and ride spaces should include design for a two-lane SB approach to Wulfsohn Road to help alleviate potential SB queuing issues across the transit station and park and ride lot access aisle.
- At the NB approach to Wulfsohn, RFTA should work with the City to trim and/or remove trees to provide the maximum sight distance possible with existing geometric limitations (~475 ft).
- At the west side of the Wulfsohn Road project intersection to facilitate pedestrian access to and from the park and ride, RFTA should install a painted crosswalk with warning signage per the MUTCD consisting of a W11-2 pedestrian crossing sign with a W16-7p plaque mounted on the side of the roadway at the crosswalk location and a W11-2 advanced pedestrian warning sign.
- The EB left, WB left, and NB left turn bay lengths are exceeded by 2030 Total traffic at the 9th/Grand intersection. The side street approach bays could be restriped to a

minimum of 160 ft length. The NB approach bay could be lengthened 10-20 ft by lowering the taper rate between the 10<sup>th</sup> Street SB left turn bay to the south.

- The EB and WB side street approaches of the intersection of 9th/Grand are shown to operate unacceptably during the PM design hour in the 2025 Baseline with background growth and development exacerbating the operations. There are similar LOS issues at the 8<sup>th</sup> Street intersection in the model and typical for most of the intersections in the SH 82 corridor from Glenwood Spring to Aspen. The City could work with CDOT to allow additional side street green time.

## Appendix B - METHODOLOGY / ASSUMPTIONS (CORRESPONDENCE WITH CoGS)

## SCOPING MEMO

**DATE:** December 17, 2024

**TO:** Eric Rolle, Shrewsberry  
Ben Ludlow, RFTA

**FROM:** Dan Cokley, PE, PTOE 

**RE:** RFTA GMF Traffic Study Update Scoping

---

This proposal includes the following scope that updates the RFTA GMF TIS dated 9/20/23 per the request of Ben Ludlow (study format), update submitted Land Use(s), and address City of Glenwood Springs questions dated 12/10/24 regarding the above referenced TIS.

SGM will provide (3) separate “analyses”, one for each phase described below.

- **Phase 6A** - An increase from current operation to a 60-bus option is outlined in the original study. Operations Center 9,647 sf. 110 space Park and Ride lot, an addition of 20 PnR spaces over existing.
- **Phase 6B** - Administrative offices, 30,790 sf.
- **Phase 8** - Bus maintenance and storage, 2752 sf. No additional trips.
- Employee Housing is deleted from the analysis

To provide the separate “analyses”, SGM would use the same format as the 2023 TIS (9/20/23) for Phase 6A. Phase 6A will include a 2030 (2027 rounding up) opening year analysis scenario, also performing a 2025 (current), and 2045 (20 yr) scenarios.

For Phase 6B, SGM would perform the same scenario analysis as an “amendment” to the 6A study, that would add the 6B Admin building land use traffic generation, but not replicate the 2025 analysis and other “existing condition and background” traffic discussion.

For Phase 8, we propose writing a letter identifying the use and noting the storage / warehouse does not generate additional traffic.

Respond to CoGS questions dated 12/10/24 within the updated traffic study. The planned response to comment # 2, will be as follows for submittal 1/3/2025.

*Provide analysis at intersections 1, 2, and 3 as a part of this analysis.*

- The original scoping with City Engineering did not include these intersections due to the insignificant changes in traffic volumes based upon percent traffic increase of ~5-6% at those intersections to cause an appreciable change in Level of Service or Delay. The percentages are provided in the updated study.

The allowance to address additional CoGS review comments includes this analysis if it is determined to be necessary following the re-submittal January 3<sup>rd</sup>.

## MEMORANDUM

**DATE:** *Revised February 20, 2023*

**TO:** Terri Partch, City Engineer, City of Glenwood Springs  
Jessica Bowser, Asst. City Engineer, City of Glenwood Springs

**FROM:** Dan Cokley, PE, PTOE

**RE:** RFTA GMF Level Three Traffic Analysis Methodology Proposal

---

A traffic impact study will be prepared using the guidelines of a Colorado Department of Transportation (CDOT) Level Three Traffic Impact Study (TIS) and will satisfy City of Glenwood Springs Engineering Standards Chapter 5.11 Traffic Impact Analysis Standards. The TIS will provide estimates for design hour traffic generation for the RFTA Glenwood Maintenance Facility (GMF) and adjacent Park and Ride lot proposed expansion which is planned to occur in several phases over several years.

This memo documents the methodology and assumptions that SGM intends to use for the RFTA GMF located on the west of Wulfsohn Road in Glenwood Springs, Colorado. The full development of the site and all phasing will be analyzed in this TIS. A summary (to be verified by RFTA prior to TIS) of the future development is provided below.

- Phase 3/4/5/7 - An increase from current operation to a 60-bus option is outlined in this study. 13,100sf of new operations center.
- Phase 6 - 14,400 sf Administration building.
- Phase 8 - 9,600sf Warehouse storage.
- Phase 9 - 74 employee housing units and additional 45-space Park and Ride expansion (total 130-space).

The goal of this memo is to gain the City's acceptance of the data intended for use in the analysis, assumptions proposed for the analysis (directional distribution, trip reduction factors, etc.) and to define the final scope and the overall approach to the TIS.

Figure 1 - RFTA GMF / Park and Ride Site Map

## ADD FIGURE 2 - Overall Site Plan (Ultimate Buildout)

Background - We intend to generally use the Glenwood Meadows Master Traffic Study by K-H (GMTS) for future development traffic, distribution and assignment of future traffic, and growth factor beyond the development traffic presented in the GMTS.

Baseline Traffic - *The City has had K-H update traffic counts which will be used for this study.*

*New traffic counts will be provided for the following intersections:*

4. Midland and West Wulfsohn
12. 8<sup>th</sup> and Colorado
13. RFTA access and Wulfsohn
14. 9<sup>th</sup> and Colorado
15. 9<sup>th</sup> and Grand

Baseline traffic counts will *NOT* be adjusted using a seasonal factor based on CDOT count station on SH 82 in South Glenwood.

**Figure 3 - RFTA GMF Scoping Map**

Analysis Years - Operational analysis of Baseline traffic (2023), 20-year background traffic (2043) and 20-year total traffic (2043) will be completed. Significant and impactful phasing may also warrant additional analysis prior to the 20-year timeframe.

Development and Growth - The TIS will input the future development considered in the GMTS for the Glenwood Meadows area, less RFTA (Zone 5) which will be developed in this TIS. This traffic will be distributed and assigned per the GMTS Figure 12. The TIS will use an annual growth rate

of 0.5% applied to volumes outside the immediate Glenwood Meadows travelshed (Intersections a. through e. above and through traffic on Midland Ave).

RFTA Land Use Rates - Trip generation rates from the ITE Trip Generation Manual, 11<sup>th</sup> Edition will be used

- Phase 3/4/5/7 - An increase from current operation to a 60-bus option, 13,100sf of new operations center (office). Use RFTA data for increased buses. General Office Building (Code 710).
- Phase 6 - 14,400 sf Administration building. Use General Office Building (Code 710)
- Phase 8 - 9,600sf Warehouse storage. No additional staffing, no additional trips.
- Phase 9 - 74 employee housing units and additional 45-space Park and Ride expansion (total 130-space). Use Park and Ride (Code 090) and Multi-Family Housing, Mid-rise (Code 221).

RFTA Traffic Distribution - The directional distribution for *RFTA staff and PnR* traffic will match existing travel patterns defined by counts at the RFTA accesses and Wulfsohn Road intersection and downstream intersection distributions. *Existing bus routes at time of GMTS / SGM counts vs future expansion of routes will be analyzed and implemented.*

Access Permits - Evaluation of the need for an Access Permit at Exit #114 and 9<sup>th</sup> / Grand by phase, using GMTS traffic counts.

Operational Analysis - Analysis of the will include intersections 4. - 13. outlined above. LOS, Delay, 95<sup>th</sup> Percentile Queue to be reported for each analysis scenario.

Auxiliary Lane Assessment - The need for auxiliary lanes at the project access intersection will be evaluated per the State Highway Access Code. Wulfsohn is assumed to be a Category NR-C (Non-Rural Arterial). The speed limit in the vicinity of the site is posted at 40 mph.

Multi-modal trip reduction - The location is adjacent to the existing Park and Ride. Given the multi-modal opportunities, a 10% reduction in trips associated with potential future employees (Operations and Administration buildings) and potential future residents (multi-Family housing) is conservatively applied and summarized below.

- Phase 3/4/5/7 - 10% transit reduction applied to office
- Phase 6 - 10% transit reduction applied to office
- Phase 8 - No additional trips.
- Phase 9 - 10% transit reduction applied to housing

*10% reduction will be applied a single time by land use.*

Transportation Demand Strategies - *Review opportunities for management staff, bus drivers, off peak hours.*
