## Appendix D - APRIL 2023 TRAFFIC COUNTS

|            |                                   |
|------------|-----------------------------------|
| Study Name | 8th&Colorado                      |
| Start Date | Tuesday, April 25, 2023 11:00 AM  |
| End Date   | Wednesday, April 26, 2023 6:45 PM |
| Site Code  |                                   |

Overview

This report contains turning movement volume (TMV) data of vehicular traffic in the intersection of study.

Content

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Summary   | Contains a TMV summary of all vehicular traffic in the intersection for defined peak periods |
| TMV Table | Contains a pivot table of the TMV road and crosswalk data                                    |
| TMV Data  | Contains measured TMV data of all vehicular traffic in the intersection for each approach    |
| Ped Data  | Contains detected pedestrian information for the intersection's crosswalks                   |

Overview

This report contains turning movement volume (TMV) data of vehicular traffic in the intersection of study.

Content

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Summary   | Contains a TMV summary of all vehicular traffic in the intersection for defined peak periods |
| TMV Table | Contains a pivot table of the TMV road and crosswalk data                                    |
| TMV Data  | Contains measured TMV data of all vehicular traffic in the intersection for each approach    |
| Ped Data  | Contains detected pedestrian information for the intersection's crosswalks                   |

Overview

This report contains turning movement volume (TMV) data of vehicular traffic in the intersection of study.

Content

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Summary   | Contains a TMV summary of all vehicular traffic in the intersection for defined peak periods |
| TMV Table | Contains a pivot table of the TMV road and crosswalk data                                    |
| TMV Data  | Contains measured TMV data of all vehicular traffic in the intersection for each approach    |
| Ped Data  | Contains detected pedestrian information for the intersection's crosswalks                   |

## Overview

This report contains turning movement volume (TMV) data of vehicular traffic in the intersection of study.

## Content

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Summary   | Contains a TMV summary of all vehicular traffic in the intersection for defined peak periods |
| TMV Table | Contains a pivot table of the TMV road and crosswalk data                                    |
| TMV Data  | Contains measured TMV data of all vehicular traffic in the intersection for each approach    |
| Ped Data  | Contains detected pedestrian information for the intersection's crosswalks                   |

| Study Name | W Wulfsohn & Midland Ave          |
| Start Date | Tuesday, April 25, 2023 7:00 AM   |
| End Date   | Wednesday, April 26, 2023 6:30 PM |
| Site Code  |                                   |

Overview

This report contains turning movement volume (TMV) data of vehicular traffic in the intersection of study.

Content

|           |                                                                                              |
|-----------|----------------------------------------------------------------------------------------------|
| Summary   | Contains a TMV summary of all vehicular traffic in the intersection for defined peak periods |
| TMV Table | Contains a pivot table of the TMV road and crosswalk data                                    |
| TMV Data  | Contains measured TMV data of all vehicular traffic in the intersection for each approach    |
| Ped Data  | Contains detected pedestrian information for the intersection's crosswalks                   |

## Appendix C. Figures and Tables

**Figure C1. Guidelines for the Installation of Pedestrian Hybrid Beacons on Low-Speed Roadways**

**Figure C2. Guidelines for the Installation of Pedestrian Hybrid Beacons on High-Speed Roadways**

**Table C1. Criteria for Pedestrian Crossing Treatments at Uncontrolled Locations**

The criteria for pedestrian crossing treatments at uncontrolled locations is intended as a general minimum. Engineering judgment should be used on a case-by-case basis. Prevailing speed may be used if significantly different than posted speed.

| Roadway Configuration                         | Roadway ADT and Posted Speed (mph) |    |    |     |                    |    |    |     |                     |    |    |     |              |    |    |     |

#### Treatment Descriptions:

- ☐ A. Install marked crosswalk with enhanced roadside signs.

*Install a marked crosswalk with a standard W11-2 with a W16-7p plaque mounted on the side of the roadway at the crosswalk location and a standard W11-2 advanced pedestrian warning sign. Use S1-1 signs for school crossing locations. An optional R6-1 may be used in addition.*

- ☐ B. Install marked crosswalk with enhanced roadside and in-roadway signs.

- ☐ C. Install marked crosswalk with enhanced signs and geometric improvements to increase pedestrian visibility and reduce exposure.

- ☐ D. Install marked crosswalk with enhanced signs, pedestrian activated RRFBs, and geometric improvements to increase visibility pedestrian and reduce exposure.

- ☐ E. Do not install marked crosswalk at uncontrolled crossing. Determine if speed limit can effectively be reduced to 40 mph by making geometric or other infrastructure changes (i.e., bulb out, median refuge, etc.). If so, utilize criteria D above. If this is not possible, if pedestrian volume meets warrants, consider a pedestrian hybrid beacon, pedestrian traffic signal, or grade separated crossing.

- ☐ F. Do not install marked crosswalk at uncontrolled crossings with three (3) or more through lanes per direction or where the speed limit is greater or equal to 45 mph and/or there is not a median refuge on a 5-lane crossing. Consider pedestrian hybrid beacon, pedestrian traffic signal, or separated crossing.

## 1.0 INTRODUCTION

### 1.1 Project Overview

Shrewsberry & Associates, LLC has retained WSP USA Inc. (WSP) to perform a preliminary geotechnical engineering study as part of their support to Roaring Fork Transportation Authority (RFTA) for Part II of the RFTA Glenwood Springs Maintenance Facility (GMF) Phase 6-Administration Building and Bus Rapid Transit (BRT) Station, located at the intersection of Midland Avenue and Wulfsohn Road in western Glenwood Springs, Colorado. This report presents the results of the geotechnical investigation and contains preliminary geotechnical recommendations for the proposed development.

The project site is the RFTA Glenwood Maintenance Facility (GMF) located in Glenwood Springs, Colorado shown in Figure 1.

The specific project site location as well as borehole locations are shown in Figure 1.

Figure 1: Borehole Locations

## 1.2 Scope of Services

WSP provided the following services as outlined in the scope of work dated December 27, 2022.

- A field investigation program that included drilling five boreholes. A detailed description of the field investigation program is provided in Section 2.1. Borehole logs are included in Appendix A.
- Laboratory testing on representative soil samples collected during the field investigation to determine material classification and subsurface conditions at the project site relative to the proposed construction.
- Engineering analysis and preparation of preliminary geotechnical recommendations for the foundation type, site preparation methods, and development risks for the proposed development.
- Preparation of this report summarizing the findings and our recommendations.

## 2.0 GEOTECHNICAL FIELD INVESTIGATION

### 2.1 Geotechnical Drilling Investigation

Five geotechnical boreholes were drilled within the proposed development from May 1 to May 4, 2023. The Locations of the boreholes are shown in Figure 1. A summary of the borehole coordinates is provided in Table 1.

**Table 1: Summary of Boreholes**

| BOREHOLE IDENTIFIER (ID) | DEPTH (FT) | LATITUDE <sup>1</sup> | LONGITUDE <sup>1</sup> | APPROXIMATE ELEVATION (FT) <sup>2</sup> |
|--------------------------|------------|-----------------------|------------------------|-----------------------------------------|
| BH-1                     | 85         | 39.557560             | -107.353959            | 5809                                    |
| BH-2                     | 85         | 39.557700             | -107.354609            | 5801                                    |
| BH-3                     | 5          | 39.557472             | -107.354639            | 5802                                    |
| BH-4                     | 85         | 39.558321             | -107.354278            | 5786                                    |
| BH-5                     | 5          | 39.557354             | -107.354186            | 5810                                    |

Notes:

ID = identifier

Ft = feet

1 = locations not surveyed. Coordinates provided from a handheld global positioning system (GPS) device or estimated from mapping tools.

2 = Elevations estimated from contours.

The borehole logs (Logs of Boreholes), provided in Appendix A, list the borehole identifier and drilling date, and describe the earthen materials encountered and depths of soil samples that were collected. The boundaries between different soil types (if encountered) shown on the logs are approximate because the actual transition between soil layers may be gradual.

A Central Mine Equipment Company (CME) CME-75 truck-mounted drill rig owned and operated by Dakota Drilling, LLC of Denver, Colorado, was used to advance the geotechnical boreholes and to obtain soil samples for observation, description, classification, and testing. The boreholes were advanced using an eight (8) inch hollow-stem auger for both five-foot holes and down hole hammer drilling with air as the flushing medium (Overburden Drilling Eccentric, ODEX) for the three deep holes.

Standard Penetration Tests (SPTs) were conducted in general accordance with American Society for Testing and Materials (ASTM) Method D1586. Samples were collected for field classification using a Standard Penetration Test (SPT) split-spoon barrel sampler and a modified California split-spoon brass ring-lined barrel sampler for

collecting undisturbed samples at regular intervals, including depths of two and five feet, and then every five feet up to a depth of 85 feet below ground surface (ft-bgs) when possible. The samples were driven either 18 inches (standard split-spoon sampler) or 12 inches (modified California split-spoon sampler), or until refusal, into the soil at the bottom of the borehole. Soil is retained inside the split barrel shaft and is visually classified. The split-spoon sampler was driven with a 140-pound hammer freely falling from a height of 30 inches. The number of blows required for each six inches of penetration was recorded. The number of blows required to advance the sampler the last 12 inches is the penetration resistance N-value, or blow count, and provides a qualitative measure of the relative density of cohesionless soils or consistency of cohesive soils. The N-value recorded in the field for each SPT is shown on the borehole logs included in Appendix A. The SPTs were conducted using a rope and cathead with a safety hammer. The energy efficiency of this system is estimated to be approximately 60 percent of the theoretical free-fall energy. Therefore, for geotechnical correlations based on 60 percent efficiency, the SPT blow counts were used without correction.

Samples collected from the SPT split-spoon samplers were placed and sealed in plastic bags. Ring samples were placed in capped plastic tubes lined with plastic bags. WSP geotechnical personnel were present throughout the field investigation to observe the drilling and to record SPT blow counts. Soils were classified in general accordance with ASTM D 2488, "Standard Recommended Practice for Description of Soils (Visual-Manual Procedure)". The boring logs present soil descriptions based on the field classifications that have been updated where necessary based on the results of the laboratory testing in accordance with ASTM D 2487, "Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System)".

## 2.2 Geotechnical Laboratory Testing

Geotechnical laboratory testing was performed on selected samples from the field investigation by WSP's Phoenix laboratory to substantiate field classifications and to provide engineering properties necessary for developing preliminary geotechnical design recommendations.

The laboratory testing program included sieve (grain-size) analysis, Atterberg Limit tests (plasticity), and moisture determination. Tests are performed in accordance with the standard procedures listed in Table 2, below. The laboratory test results are presented in Appendix B. The soil samples were also checked against the field classifications, which were then updated as appropriate in accordance with ASTM Method D2487.

**Table 2: Geotechnical Test Methods Applied to Representative Soil Samples**

| GEOTECHNICAL TEST                  | TEST METHOD           | NUMBER OF TESTS |
|------------------------------------|-----------------------|-----------------|
| In-situ Moisture Content           | ASTM D2216            | 18              |
| Sieve (Grain-Size) Analysis        | ASTM C136/C117        | 21              |
| Atterberg Limits (Soil Plasticity) | ASTM D4318            | 21              |
| Collapse Potential of Soils        | ASTM D5333            | 3               |
| R-Value                            | ASTM D2844            | 1               |
| Modified Proctor                   | ASTM D1557            | 1               |
| pH and Resistivity                 | ASTM D6276/D4972/G187 | 2               |
| Soluble Sulfates and Chlorides     | ASTM G516/D512        | 2               |

Notes:

ASTM=American Society for Testing and Materials

### 3.0 SITE CONDITIONS

The elevation of the site is approximately 5,800 feet above mean sea level (ft amsl). Much of the site is paved for parking or roadways as part of the existing RFTA facilities. The north portion of the site investigated for this project included an area that had recently been rough graded with approximately 10 to 15 feet of new fill, and portions of the area were being used for construction trailers for the current construction activity at the site. Evidence of recent debris flow events can be observed on the surface in the drainage to the west of the GMF and debris flows are known to occur in the channel that reports to a ditch just uphill of the GMF, and in channels that are mitigated by a larger berm to the southeast.

The RFTA GMF is a very active bus depot and bus maintenance facility that has on-going large-scale construction south of the geotechnical drilling locations. Four of the five boreholes are located within the overflow and employee parking lot. The last borehole is located just north of the public parking lot fill placed in the past several years. The parking lot and bare soil surfaces were relatively dry and accessible on the days of drilling.

### 3.1 Regional Geology

The site is on the south side of the Colorado River Valley at the west end of the wide area that is occupied by the City of Glenwood Springs. The valley is an erosional feature formed within the Maroon Formation by the Colorado River with the upper part of the Eagle Valley Evaporite Formation exposed sporadically near the valley floor. Quaternary deposition of alluvial river gravels has occurred over the bedrock then eroded to form the current channel of the river. The most recent deposition is the numerous debris fans upon which much of Glenwood Springs has been constructed, especially over the past 20 years. The site is located on the western edge of an active debris fan that likely overlies river gravels deposited on sandstone or evaporite bedrock.

The reddish colored Maroon Formation sandstone, arkosic sandstone, shale, and siltstone layers dip steeply to the south in this area as the Grand Hogback feature turns east then south along the boundaries of Glenwood Springs. The south dipping strata exposed by the north-facing slope results in steep cliffs over which surface water flows causing intense erosion and subsequent debris flows. The Maroon Formation is associated with frequent debris and mud flow events wherever it outcrops in Western Colorado. Debris flow mitigation has been installed previously to protect this and other sites on the fan.

### 3.2 Debris Fan Formation

The project site is located on an active debris fan, as noted above. The term active refers to the fact that debris flows generally occur every few years and deposit material behind existing mitigation berms or in ditches and must be regularly cleaned by the City of Glenwood springs. Understanding the nature of debris fans and their formation will help with the understanding of the unique geologic hazards and geotechnical conditions at the site.

Debris fans form when transported soil is deposited during intense precipitation or snowmelt event. Fans develop over hundreds to thousands of years as subsequent flows cause erosion and deposition of material, which changes the topography near the channel causing subsequent flows to deposit on other parts of the fan. This process is known as avulsion and channel relocation can be caused by surface elevation changes or by drainage channels being blocked by logs and boulders. Over time, a relatively uniform, fan shaped feature forms.

Overburden soils underlying the site near the planned improvements consists primarily of rocky, clayey, sandy, silty alluvial soils deposited by debris flow events originating from drainage basins to the south of the site. Rapid deposition of soil and rock comprising a flow occurs because the gradient of the fan is less than the gradient of the channel above the apex. Flow material consists of water with 25% to 45% entrained solids by volume. As the

flow slows on the fan, deposition occurs as the water content and fluid shear stresses decrease. Some flows are more viscous than others and some have higher percentages of gravel, cobble and boulder sized material. Flows also exhibit variable amounts of logs, organic material and charcoal which can be included in the soils that comprise the fan. The fan is essentially made up of lenticular deposits that are the width and height of the flow events that deposited them.

The depositional environment on the fan results in subsurface conditions that include low density soils with an unstable structure that are prone to collapse when wetted. Buried logs or other accumulations of organics can be problematic for foundations if they are near the surface. Variable amounts of rock clasts can cause differential permeability between layers resulting in seasonal perched water tables that can cause unexpected hydro collapse or can cause constructability issues.

### 3.3 Generalized Subsurface Conditions

Important points related to the subsurface conditions at the sites are summarized below:

- BH-1, BH-2, BH-3, and BH-5 were drilled through asphalt and approximately 6 inches of base course. BH-4 began in fill material which was very similar to the native soil described below.
- Silty Sand / Silty Gravel (SM/SG) soils with 25 to 45 percent non-plastic fines were observed in all boreholes. It was described as red to brownish red, with gravel percentages between 0 and 28 percent.
- SPT N60 values averaged approximately 20 to 30. No distinct layering was identified (see Figure 2), but blowcounts in excess of 40 occurred sporadically between elevation 5,780 and 5,755, and again below 5,735 in BH-2, likely indicative of cobbles or boulders.
- Boulders and cobbles up to 2 feet in diameter were noted by the driller.
- The dense alluvial gravels layer was not definitively encountered in any of the boreholes but could have potentially been encountered at the bottom of BH-2. This layer was encountered at a depth of approximately 100 feet in nearby boreholes for the GMF expansion project.
- No significant organic material was encountered in any of the boreholes.

Figure 2: Plot of N60 Blowcounts versus Elevation

### 3.4 Groundwater

Groundwater was not encountered in any of the boreholes advanced at the site. The site is approximately 120 feet above the Colorado River, so the groundwater depth is estimated to be near that elevation. Borehole observations are representative of groundwater conditions at the time of WSP's field exploration and may not be indicative of other times. It should be noted that the presence of subsurface water can be influenced by changing factors including varying seasonal and weather conditions.

### 3.5 Geologic Hazards

Geologic hazards relevant to this site include potentially hydro-collapsible soil, and debris flows. No soils with high swell potential were encountered on this project site. Further discussion regarding identified geologic hazards is provided in the following paragraphs.

#### 3.5.1 Collapsible Soil

Hydro-compactive or collapsible soils are subject to significant volume reduction when wetted while subject to foundation loading. This volume reduction occurs primarily because of the dissolution of cementitious materials, such as calcium carbonate, that bond soil particles or softening of desiccated clay colloids that support flocculated soil fabrics. The wetting and loading history of the soil influences the collapse potential, and a soil may collapse under even relatively low loads, when the soil moisture content exceeds past levels. Often, the placement of a new structure changes the drainage or evapotranspiration regime of the soil, increasing the likelihood of a collapse event (Houston et al. 2002).

Hydro compaction represents the largest risk for construction on debris fans. Other nearby investigations have identified collapse potentials greater than 10% at low normal pressures. There are several examples of structures in Glenwood Springs that experienced unacceptable deformations because of hydro-collapse, including facilities at the GMF.

On parts of the fan that have not been graded or altered, the upper depth of soil has been wetted many times and is therefore less susceptible to collapse unless a significant additional vertical load is applied. The depth of wetting from surface infiltration on the undisturbed parts of the fan is typically assumed to be less than 20 feet, however the site is on a highly disturbed part of the fan where grading cuts and fills may have exposed previously unwetted soils increasing the potential for future collapse with changing moisture content and loading.

Three hydro-collapse tests were performed for this project, and the measured hydro-collapse strain at a normal pressure of 4 ksf ranged from approximately 2 to 4 percent. This demonstrates that hydro-collapse potential exists at the site, even at depths of up to 40 feet below grade.

Ponding of water, shallow unpaved gradients, poorly designed or constructed foundation drainage systems, and other potential sources of wetting should be avoided or mitigated.

#### 3.5.2 Debris Flows

There are several drainage basins up gradient of the RFTA facility that have the potential for generating debris flows. For the most part, these have been mitigated by berms or ditches. We understand that they have generally performed well and the COGS cleans them periodically after flow events.

One basin just east of the site produced a series of debris flows during the time the geotechnical investigation was being conducted. These flows were significant enough to cover the road and require substantial maintenance efforts to clear. But they do not threaten the proposed facilities for this project.

## 4.0 GEOTECHNICAL RECOMMENDATIONS

### 4.1 Geotechnical feasibility

The following recommendations are based on the field investigation, laboratory testing, and geotechnical analyses conducted for the project. WSP believes that it is feasible to construct the proposed facilities and associated improvements based on geotechnical considerations, provided the recommendations contained in this report are properly considered and implemented in the planning, design, and construction phases of the project.

### 4.2 Seismic Design of Structures

Application of the American Society of Civil Engineers 7 Standard 2022 (ASCE 7-22) to the project site yielded a design spectrum with peak ground acceleration (PGA) value, modified to the site, of 0.21g (21 percent of gravity). Seismic design parameters for the project site can be found in Table 3.

**Table 3: Seismic Design Parameters (ASCE 7-22)**

| Parameter                                                             | Design Value |
|-----------------------------------------------------------------------|--------------|
| Site Classification                                                   | CD           |
| Building Risk Category                                                | III          |
| PGA <sub>M</sub> – Site modified PGA                                  | 0.21g        |
| <b>Spectral Response Acceleration</b>                                 |              |
| S <sub>S</sub> – MCE <sub>R</sub> ground motion for 0.2 second period | 0.32g        |
| S <sub>1</sub> – MCE <sub>R</sub> ground motion for 1.0 second period | 0.057g       |
| S <sub>MS</sub> – Site modified S <sub>S</sub>                        | 0.36g        |
| S <sub>M1</sub> – Site modified S <sub>1</sub>                        | 0.1g         |
| S <sub>DS</sub> – Numeric seismic design value at 0.2s SA             | 0.24g        |
| S <sub>D1</sub> – Numeric seismic design value at 1.0s SA             | 0.069g       |
| T <sub>L</sub> – Long-period transition period                        | 4 seconds    |
| Seismic Design Category                                               | B            |

The V<sub>s100</sub> shear wave velocity, or the average shear wave velocity in the top 100 feet, was taken as approximately 1,400 ft/sec based on seismic data collected by Collier Geophysics (2022) for the maintenance facility.

### 4.3 Hydro Collapse and Geotechnical Risk

There is real risk of post-construction settlement caused by hydro-collapse based on the history at the site and nearby and corroborated by the field and laboratory testing. The likelihood of this occurrence is difficult if not impossible to predict. The consequence or magnitude of the potential hydro-collapse settlement depends on the thickness of the potentially collapsible deposit that is partially to fully wetted. Assuming 20 to 60 feet of the deposit is wetted, and using the laboratory collapse data, we estimate that the potential hydro-collapse settlement under anticipated building loads could range from 2.5 inches to greater than 7 inches. Because the lab results for this project showed collapse of 4% or less, the actual hydro-collapse settlement could be significantly more given that laboratory collapse tests from other nearby boreholes have shown collapse potential up to 10%.

One approach to hydro-collapse mitigation is to try to prevent wetting of the subsurface. This approach is not recommended as it is difficult to implement with any degree of certainty in the results. However, incorporating means to prevent moisture infiltration should still be a component of the project, just not the sole means of mitigation. WSP believes that this risk warrants mitigation in the form of ground improvement and/or deep foundations. This recommendation is in line with the approach being taken on the current maintenance facility construction.

### 4.4 Ground Improvement Recommendations

There are two types of ground improvement that WSP believes are suitable for this project: drilled displacement grout columns and compaction grouting.

#### 4.4.1 Compaction Grouting

Compaction grouting involves drilling a hole and using the hollow drill stem to inject a low-slump grout at high pressure from the bottom up to densify the soil around the hole and form a rigid column. This method of ground improvement has been used on RFTA GMF facilities both for remediation of hydro-collapse settlement, and during construction to proactively mitigate potential hydro-collapse.

#### 4.4.2 Drilled Displacement Grout Columns

Drilled displacement grout columns use a foundation drill rig equipped with a drill bit with a counter-flighted auger tip. This drill tip uses the torque and crowd pressure of the drilling to force the soil laterally as it advances, so no soil spoils are generated at the surface. Once the target depth is reached, grout or concrete is pumped through the hollow drill stem as the drill stem is withdrawn. The typical column diameter is 24 inches.

#### 4.4.3 Preliminary Column Layout

WSP recommends that a preliminary compaction grouting or displacement grout column spacing of 10 feet be used with a treatment depth of 100 feet below grade for column and wall locations, and 50 feet for the remainder of the building footprint. This configuration is consistent with what is being used for compaction grouting at the GMF expansion project.

### 4.5 Foundation Recommendations

The following sections contain recommendations for both shallow and deep foundations. Shallow foundations should be constructed in conjunction with ground improvement as recommended in Section 4.4. For the deep foundation option, interior portions of the building not supported by deep foundations should be treated with ground improvement as recommended in Section 4.4.

### 4.5.1 Shallow Spread Footings

Isolated column footings and wall footings can be designed based on the recommendations provided below provided that ground improvement columns are located within 3 feet of the bottom of the footing.

- WSP recommends shallow foundations be supported on at least 2 feet of engineered fill overlying the ground improvement columns.
- Loose or otherwise disturbed soil in between ground improvement columns, if encountered at the base of the engineered fill layer, should be over-excavated and re-compacted as engineered fill in accordance with Section 5.4.
- Isolated column footings and continuous wall footings should have minimum widths of 24 and 18 inches, respectively.
- Shallow foundation should be embedded a minimum of 36 inches below grade for frost considerations or constructed in accordance with appropriate City of Glenwood Springs (COGS) building code requirements.
- Shallow spread footing foundations supported on engineered fill material overlying ground improvement, as described above, may be dimensioned using an allowable bearing capacity of 4,000 psf, when the base of the foundation is located at least 2 feet below the lowest adjacent grade.
- Continuous wall footings supported on engineered fill overlying ground improvement, as described above, may be dimensioned for an allowable bearing capacity of 3,000 psf, when located at a depth of 1.5 feet below the lowest adjacent grade.
- Total and differential settlement of column and wall footings dimensioned using the values provided above are not anticipated to exceed 1.0 inch and 0.75 inch, respectively.
- Exterior grades around the proposed building should be covered with impervious or low permeability material or soil and should drain away from the structures to avoid an accumulation of water beneath the foundations and slabs.
- Wet utilities (water, sewer, drainage, etc.) should be located away from foundations so that the water will not readily access foundation soil should any leakage occur.
- Foundation perimeter drains should be designed and constructed to eliminate the potential for surface or subsurface water to wet the foundation soils.

### 4.5.2 Slab-on-Grade Floors

Any areas to receive new concrete slab-on-grade floors should be well drained and level. The top 10 inches of subgrade should be scarified, moisture conditioned, and compacted in accordance with Section 5.4. WSP recommends placing the floor slabs on 6 inches of base course. The base course provides for drainage beneath the floor slab; provides a suitable working platform and leveling course for the construction operation, especially during adverse weather; and provides additional support to the floor slab. Base course should meet the requirements for Colorado Department of Transportation (CDOT) Class 6 aggregate base course.

Structural design of the slab should be conservatively based on a modulus of subgrade reaction of 100 pounds per cubic inch (pci). The modulus of subgrade reaction may be increased to 125 pci for slabs bearing on 6 inches of base course, as described above.

In the areas where the applied contact pressure exceeds the typical floor load, as with heavy equipment or other concentrated loads, WSP recommends isolating the equipment slab from the adjacent floor slab and designing the equipment slab as a mat foundation using the modulus of subgrade reaction as specified above. Areas adjacent to foundations should be designed to drain away from the structures to avoid an accumulation of water beneath the slabs. The designer should refer to ACI Design Manual, Section 302.1R (2019) for additional floor slab design considerations.

### 4.5.3 Drilled Shaft Foundations

WSP recommends drilled shaft foundations as the deep foundation option for this project. Driven piles may be difficult to drive to the necessary depth with the presence of boulders. Drilled shafts have been successfully constructed on the GMF site and can be excavated to the depths necessary. Drilled shafts can be combined with an interior structural floor slab system supported on elevated grade beams if desired. Drilled shaft recommendations are provided in the following sections.

Drilled shaft design was performed in accordance with the following design standards and references:

- Federal Highway Administration (FHWA) Geotechnical Engineering Circular (GEC) No. 10 - Drilled Shafts: Construction Procedures and LRFD Design Methods (Brown, Turner, and Castelli 2010)
- IBC Chapter 18 (IBC 2021)
- Minnesota Department of Transportation Geotechnical Engineering Manual (MNDOT 2021)

#### 4.5.3.1 Drilled Shaft Design Parameters

The following design parameters are recommended for drilled shaft foundation design:

- N60 (blows/ft) – 20
- Bulk Unit Weight,  $\gamma$  (pcf) – 115
- Elastic Modulus (ksf) – 600 (assumes ground improvement)
- Lateral Soil Modulus,  $k$  (pci) – 150 (assumes ground improvement)

#### 4.5.3.2 Downdrag Due to Potential Hydro-Collapse

Even though WSP is recommending ground improvement within the building footprint, it is possible that if hydro-collapse occurs at some time in the future, down drag could be applied to the drilled shafts. We assumed a zone of wetting (and subsequent hydro collapse) 30 feet thick for this analysis and that below 30 feet, the soil becomes relatively stiff again resulting in the neutral axis being at the bottom of the wetting front. The drag force varies according to the diameter of the drilled shaft as shown in Table 4.

**Table 4: Design Drag Force as a Function of Drilled Shaft Diameter**

| DRILLED SHAFT<br>DIAMETER (FT) | DOWNWARD DRAG FORCE<br>(KIPS) |
|--------------------------------|-------------------------------|
| 1                              | 150                           |
| 1.5                            | 225                           |
| 2                              | 300                           |
| 2.5                            | 370                           |

| DRILLED SHAFT<br>DIAMETER (FT) | DOWNWARD DRAG FORCE<br>(KIPS) |
|--------------------------------|-------------------------------|
| 3                              | 445                           |
| 4                              | 590                           |
| 5                              | 740                           |
| 6                              | 885                           |

Notes:

Additional guidance on how to apply drag forces is provided in Section 4.5.3.3.

#### 4.5.3.3 Axial Resistance Charts

WSP prepared a set of design charts to present the recommended drilled shaft allowable axial capacity as a function of depth for various diameter drilled shafts at both the geotechnical strength and service limit states. The resulting charts are presented in Appendix C. The parameters in Section 4.5.3.1 were used with the Beta Method for side resistance, and the O'Neill and Reese method for base resistance. Settlement calculations were performed using the O'Neill and Reese mobilized side and base resistance charts.

To size the drilled shaft foundations based on strength limit axial capacity, the following procedure should be used: draw a vertical line in Figure C-1 corresponding to the required allowable axial capacity per shaft. The intersection of the vertical line with the curve corresponding to the desired drilled shaft diameter will indicate the minimum drilled shaft length. Repeat the procedure for uplift loading using Figure C-2. The required drilled shaft length will be the greater of the depths determined using these two charts.

To estimate the settlement of the drilled shaft, you will utilize Figures C-3 to C-8. For each of these figures, draw a horizontal line at the computed drilled shaft length and determine the allowable service limit load corresponding to the selected drilled shaft diameter at a given settlement value. Plot the load determined using the figure against the settlement (indicated beneath the X-Axis on each chart). This load-displacement curve can be used with the required service limit load to calculate the estimated settlement. Note that these charts also include elastic compression of the shaft.

Drag forces should be applied to the structural strength limit state checks, but not to the geotechnical strength limit, in other words, do not add the drag force to the computed strength limit load prior to using Figure C-1 or C-2. Drag forces should be included when evaluating the geotechnical service limit state (load-displacement curve generated from C-3 to C-8).

#### 4.5.3.4 Lateral Analysis

A lateral load analysis should be performed by the structural designer once a drilled shaft is sized based on axial capacity considerations. The required length of the drilled shaft will be the longer of the lengths computed in the axial and lateral load analyses. The lateral modulus for this analysis is provided in Section 4.5.3.1.

If hydro-collapse occurs, there could be a loss in lateral resistance. This scenario can be modeled by utilizing a Y-multiplier of 1.2 on the p-y curves in the top 30 feet.

#### 4.5.3.5 Construction Considerations

Unstable excavation conditions should be expected during the drilled shaft excavation. The presence of silty sand and well-graded sand lenses are strong indicators that the sides of shaft excavations will not be stable if unsupported. **The drilled shaft contractor should anticipate the use of stabilizing techniques (e.g., temporary casing or polymer slurry) during drilling.**

The presence of cobbles and boulders is sometimes only indicated on the borehole logs by the numerous instances of sampler refusal (indicated on the logs where blow counts reached or exceeded 50 before a penetration of 6 inches was achieved), low sample recovery percentage, and by description of drilling action (e.g., auger chattering or grinding). The samplers used to perform SPTs during the field program are limited in diameter so that the largest particle that can be retrieved is less than 2.5 inches. This introduces a bias toward smaller particles in the soil samples that were collected so that the subsequent sieve analysis indicates material that is finer than the actual condition of the soil in the ground. WSP recommends that the drilled shaft contractor be prepared to retrieve rounded cobbles and boulders approximately 12 to 24 inches in diameter from the drilled shaft excavations.

All drilled shaft foundations should be constructed in accordance with Section 503 of the CDOT Standard Specifications.

The majority of the drilled shaft loads are expected to be carried in side friction resistance. However, over the long term some load will be transferred to the base of shafts. Accordingly, WSP recommends that the bottom of the drilled shafts be cleaned by at least two passes of a flat-bottom auger or cleanout bucket immediately (no more than two hours) prior to placement of the reinforcement cage and concrete.

A qualified inspector should complete a drilled shaft construction observation report for each drilled shaft constructed. The report should detail the nature of the materials encountered during shaft excavation and verify proper shaft depth and diameter, cleaning of the shaft base, reinforcement cage materials and installation, and concrete placement.

A temporary surface casing is recommended to prevent surface sloughing or ravelling and to ensure personnel safety. The casing diameter should not be more than 12 inches larger than the drilled shaft diameter. Common practice is to use a corrugated steel casing for this purpose.

Fall protection should be provided for workers at the open shaft as required by OSHA.

#### 4.6 Foundation Walls and Lateral Loads

Foundations located below grade and shear keys may derive lateral load resistance from passive resistance along the vertical sides of the foundations, friction acting on the bases of the foundations, or a combination of the two.

Active lateral earth pressures from horizontal backfills behind structures that are free to rotate at least 0.1 percent of the structure height can be designed for the active earth pressure conditions. Structures that are restrained against movement or rotation at the top should be designed for at-rest earth pressure conditions. Earth pressure coefficients and equivalent fluid pressures for these conditions are provided in Table 5 according to the material type being retained.

The recommended values do not include induced wall pressures from compaction, or construction. Care must be taken during the compaction operation not to overstress retaining walls. Heavy construction equipment should be

kept at least 3 feet away from the walls while the backfill soil is being placed. Hand-operated compaction equipment should be used to compact the backfill soils within the 3-foot wide zone adjacent to the walls. Soil/pavements at the toe of retaining walls should be in place and cured prior to backfilling. WSP should be contacted when development plans are finalized for review of wall and backfill conditions on a case-by-case basis. Sloping backfills will result in lateral earth pressures greater than those provided above.

The recommended lateral earth pressures provided above assume that adequate drainage is provided behind the walls to prevent the buildup of hydrostatic pressures. Walls should be provided with back drains and weep holes to reduce the potential for the buildup of hydrostatic pressure.

Live load surcharge pressure equivalent to a vertical height of 2-ft of earth should be applied to walls where the vehicle traffic can come within a horizontal distance from the top of the wall equal to one-half its height. Additional loads on retaining walls will be imposed by surcharge, which can be evaluated on a case-by-case basis.

Base friction coefficients to be applied to the total vertical force on the structure are provided in Table 6. Passive resistance should only be included where material provided the resistance will be available over the life of the structure (for example, passive resistance should be neglected where scour is anticipated to occur, or a subsequent excavation might be made). Ultimate passive earth pressure coefficients and equivalent fluid pressures for various site materials are provided in Table 6.

A factor of safety (FoS) of 1.5 is recommended for calculations involving base friction, and a FoS of 2.0 is recommended for passive earth pressure calculations. Passive resistance may require lateral movement equal to three percent of the embedded depth of the structure to fully mobilize. If less displacement is desired, the structural designer can prorate the passive resistance for the tolerable displacement. The maximum passive pressure should be capped at the value obtained at a depth of 10 feet.

**Table 5: Earth Pressure Coefficients and Equivalent Fluid Pressures Behind Retaining Structures**

| Retained Material Description        | Earth Pressure Coefficients |         | Equivalent Fluid Pressure (psf/ft) |         |
|--------------------------------------|-----------------------------|---------|------------------------------------|---------|
|                                      | Active                      | At-Rest | Active                             | At-Rest |
| Native Silty / Gravely Sand, In-Situ | 0.36                        | 0.56    | 30                                 | 52      |
| Engineered Fill                      | 0.26                        | 0.44    | 33                                 | 55      |
| Structural Fill                      | 0.24                        | 0.41    | 30                                 | 52      |

**Table 6: Equivalent Passive Fluid Pressure and Base Friction Coefficients**

| Resisting Material Description       | Earth Pressure Coefficient | Equivalent Fluid Pressure (psf/ft) | Ultimate Base Friction Coefficient |
|--------------------------------------|----------------------------|------------------------------------|------------------------------------|
|                                      | Passive                    | Passive (No FoS)                   |                                    |
| Native Silty / Gravely Sand, In-Situ | 2.56                       | 281                                | 0.62                               |
| Engineered Fill                      | 3.54                       | 442                                | 0.67                               |
| Structural Fill                      | 3.85                       | 481                                | 0.73                               |

## 5.0 SITE GRADING AND EARTHWORK

All site preparation and earthwork operations should be performed in accordance with applicable codes. All references to maximum-dry density and optimum-moisture content are established in accordance with ASTM standard test method D1557 (Modified Proctor). General recommendations for site preparation after rough grading and engineered-fill placement are provided below.

### 5.1 Drainage

Infiltration of water into utility trenches or foundation excavations should be prevented during construction. Surface features which could retain water in the areas adjacent to the proposed building should be sealed or eliminated. In areas where sidewalks or paving do not immediately adjoin the structure, WSP recommends that protective slopes be provided with a minimum grade of approximately 5 percent for at least 10 feet from the perimeter walls. Backfill against footings, exterior walls, and utility line trenches should be well compacted and free of all construction debris to reduce possibility of moisture infiltration.

### 5.2 Temporary Excavations

It is anticipated that shallow excavation within the study area can be accomplished with conventional earthmoving equipment. Instability in the form of caving, sloughing, and raveling should be expected in excavations which extend into granular deposits.

Safe, stable construction slopes are the responsibility of the contractor and depend on the ground and site conditions encountered at the time of construction. Excavations should be sloped or shored in the interest of safety following local regulations including current OSHA excavation and trenching safety standards.

### 5.3 Site Preparation Prior to Filling

Any obvious obstructions (e.g., boulders, existing pavements or debris from previous development) or exposed deleterious organic or inert materials should be removed from the base of the cuts that will receive new engineered fill.

Prior to placement of any engineered fill, the upper 8 inches of the exposed subgrade will be scarified, moisture conditioned and compacted to a minimum of 90 percent of the maximum density, as determined by the Modified Proctor (ASTM D1557) test, to provide a uniform bearing surface for construction of subsequent lifts of fill. This procedure will also serve to identify pockets of loose subgrade that could affect compaction of the initial lifts of engineered fill. Any loose pockets of subgrade that are detected should be removed to a depth until the base can sustain compaction of the upper 8 inches to 90 percent of the maximum density.

WSP should be notified immediately if the subsurface conditions exposed during grading operations vary from those described in this report, because revision of the recommendations contained herein may be necessary.

### 5.4 Engineered Fill

Based on our geotechnical investigation, the soils encountered on this site are likely to meet the requirements of engineered fill. All earthwork shall be in accordance with Sections 203 and 206 of the CDOT standard specifications. Structure backfill shall meet the requirements of Structure Backfill (Class 1) from the CDOT standard specifications. Engineered fill should be placed such that compacted lift thickness is equal to or less than 8 inches for rubber-tired or smooth drum roller type equipment and not exceeding 6 inches for sheep's foot rollers. The fill placed at foundation locations should be compacted to 92 percent of the maximum dry density as

determined by ASTM D1557 (Modified Proctor) at an as-compacted moisture content of within 2 percent of the optimum moisture content. Fill compaction placed at locations not supporting foundations may be compacted to 87 percent of maximum dry density as determined by ASTM D1557.

## 6.0 PAVEMENT RECOMMENDATIONS

We understand that as part of this project there will be paved roads and turn-arounds for buses. WSP has provided both flexible and rigid pavement sections, however, no traffic loading has been provided for the site. So we have back-calculated the ESAL values for several different pavement sections. Shrewsbury and RFTA will need to determine if these values are sufficient. We assume that all pavement mixes and placement procedures will follow relevant CDOT standards.

### 6.1 Design Parameters

WSP performed one R-Value test on material obtained from borehole BH3. The tested R-Value was 46. Published correlations with percent passing the #200 sieve and the plasticity index were evaluated against the index testing performed for the project. Nearly all of the correlated R-Values were higher than the tested value, so 46 was used for design. This resulted in a resilient modulus of approximately 15,000 psi.

We assume that the RFTA busses have an approximate gross (loaded) weight of 40,000 pounds, or about 2.22 18-kip single axle loadings.

### 6.2 Flexible Pavement Design

WSP selected several flexible pavement sections and reported the allowable 18-kip single axle loadings and the approximate equivalent number of bus loadings. The results are summarized below.

**Table 7: Flexible Pavement Options**

| Section Number | Thickness of AC (in) | Thickness of AB (in) | Allowable 18-kip Single Axle (ESAL) Loadings | Approximate Number of RFTA Bus Loadings |
|----------------|----------------------|----------------------|----------------------------------------------|-----------------------------------------|
| 1              | 6                    | 8                    | 4,000,000                                    | 1,800,000                               |
| 2              | 7                    | 10                   | 10,000,000                                   | 4,500,000                               |
| 3              | 7                    | 12                   | 15,000,000                                   | 6,750,000                               |

### 6.3 Rigid Pavement Design

Rigid pavement sections are recommended for most areas for this project. This type of pavement is better suited for bus turning movements. Plain jointed Portland Cement Concrete Pavement (PCCP) does not have any load transfer devices. Given the heavy bus volume and the potential for hydro-collapse settlement, WSP recommends that Jointed Reinforced (Doweled) PCCP be used to improve performance and reduce maintenance issues.

**Table 8: Rigid Pavement Options**

| Section Number | PCCP Type                   | Thickness (in) | Allowable 18-kip Single Axle (ESAL) Loadings | Approximate Number of RFTA Bus Loadings |
|----------------|-----------------------------|----------------|----------------------------------------------|-----------------------------------------|
| 1              | Plain Jointed (No Dowels)   | 10             | 3,000,000                                    | 1,351,000                               |
| 2              | Jointed Reinforced (Dowels) | 10             | 8,000,000                                    | 3,603,000                               |
| 3              | Jointed Reinforced (Dowels) | 11             | 15,000,000                                   | 6,750,000                               |
| 4              | Jointed Reinforced (Dowels) | 12             | 27,000,000                                   | 12,160,000                              |

## 6.4 Subgrade Preparation for Hydro-Compaction Mitigation

The pavement subgrade should be over-excavated to a depth of 3 feet below the top of subgrade wherever possible. The same material may be recompacted back into the excavation, but this will increase the density of the material and reduce the permeability which will help reduce the risk of hydro-collapse. The subgrade should be compacted to 92 percent of maximum density according to Modified Proctor (ASTM D1577), and within 2 percent wet of optimum moisture content.

## 7.0 SOIL CORROSIVITY

Laboratory tests for soil corrosion potential were performed on selected soil samples. A pH value of 8.3 was obtained from the laboratory testing. Generally, a pH between 6.5 and 7.5 is considered neutral with respect to corrosion, and the tested site soils fall just outside the neutral range on the basic side and should be considered mildly corrosive by this measure. Electrical resistivity values from 1,141 to 1,476 ohm-centimeters were obtained from laboratory testing.

On-site soils were also evaluated for soluble sulfate and chloride content to assess their corrosive potential with respect to sulfate attack. The average soluble sulfates and chloride contents measure in the lab were 9 parts per million (ppm) and 213 ppm, respectively. By this measure, the onsite soils are not corrosive, so no cement type restrictions are required.

## 8.0 LIMITATIONS

This report has been prepared exclusively for the use of Shrewsberry and Associates, LLC and RFTA. No other parties shall be entitled to rely on any of the information, conclusions, or opinions contained in this report without the prior written approval from Shrewsberry and WSP USA Inc.

This geotechnical report provides a compilation of the data collected during the geotechnical investigation that was completed for the project and provides recommendations to a level suitable to support the detailed design phase of the proposed project. Although no contaminated soils were observed and collected during the field investigation (based on field observations), this report does not take the place of a proper environmental

investigation that would be implemented to identify contaminants (should they exist) that may be encountered throughout the project site.

The conclusions and recommendations in this report have been prepared in a manner consistent with the level of care and skill ordinarily exercised by engineering professionals currently practicing under similar conditions, subject to the time limits and financial and physical constraints imposed on, or otherwise applicable, to WSP's analyses. The client has the responsibility to see that all parties to the project, including the designer, contractor, subcontractors, etc., are made aware of this report in its entirety. This report contains information that may be useful in the preparation of contract specifications and contractor cost estimates. However, this report is not written as a specification document and may not contain sufficient information for this use without proper modification.

Some water may squeeze from sample. Some shrinkage may occur on air drying. Sand fraction may be visible. Low to high dilatancy. Thread weak near plastic limit. Low to medium dry strength. |                                                                                                                                                                    |                                                |                |                                |                                    | 30% to <75%                         | PT                              | SILTY PEAT, SANDY PEAT         |                                 |                            |
|                                                                                      |                                                                |                                                                     |                                                               |                                                                                               | Predominantly peat, may contain some mineral soil, fibrous or amorphous peat                                                                                                                                                          | Lightweight, spongy. Much water squeezes from sample. Shrinks considerably on air drying (i.e., very high water content). Plant structure identifiable to altered. |                                                |                |                                |                                    |                                     |                                 | 75% to 100%                    | PEAT                            |                            |

## Coarse-Grained Soil Note(s):

- Based on the material passing the 75 mm sieve.
- If field sample contains or drilling observations indicate cobbles or boulders or both, add, "with cobbles" or "with cobbles and boulders". Include notes on the depth(s) encountered, and sizes if possible.
- Gravels with 5% to 12% fines require dual symbols:  
(GW-GM) Well-graded GRAVEL with silt,  
(GW-GC) Well-graded GRAVEL with clay,  
(GP-GM) Poorly graded GRAVEL with silt,  
(GP-GC) Poorly graded GRAVEL with clay.
- If soil contains ≥15% sand, add "with sand" to Group Name.
- If fines classify as CL-ML, use dual symbol (GC-GM) or (SC-SM) for Group Symbol.
- If the soil has an organic content (OC) 15%≤OC<30% the prefix "Organic" should be added before the Group Name. If the soil has an organic content 3%≤OC<15% add "with organic fines" to Group Name. If the soil contains >0% to ≤3% organics, the descriptor "trace organics" may be added.
- Sands with 5% to 12% fines require dual symbols:  
(SW-SM) Well-graded SAND with silt,  
(SW-SC) Well-graded SAND with clay,  
(SP-SM) Poorly graded SAND with silt,  
(SP-SC) Poorly graded SAND with clay.
- If soil contains ≥15% gravel, add "with gravel" to Group Name.

## Fine-Grained Soil Note(s):

- If Atterberg limits plot above the A-line but in the 'hatched' area on the plasticity chart, soil is a (CL-ML) SILTY CLAY.
- If the soil contains >0% to ≤3% organics, the descriptor "trace organics" may be added.
- If fine-grained materials are nonplastic (i.e., a plastic limit (PL) cannot be measured), soil is a (ML) SILT.
- If soil has a liquid limit (LL) >30% to <50%, the term 'medium plasticity' may be included in the description, but the Group Name/Symbol is not changed.
- If soil contains 15% to <30% +No.200, add "with sand" or "with gravel".
- If soil contains ≥30% +No.200 mainly sand, add "Sandy" to Group Name.
- If soil contains ≥30% +No.200 mainly gravel, add "Gravelly" to Group Name.
- If the soil has an organic content (OC) 3%≤OC<15% add "with organic fines" to Group Name.

## ABBREVIATIONS AND TERMS USED ON RECORDS OF BOREHOLES AND TEST PITS

### PARTICLE SIZES OF CONSTITUENTS

| Soil Constituent | Particle Size Description | Millimetres                                     | Inches (US Std. Sieve Size)                  |
|------------------|---------------------------|-------------------------------------------------|----------------------------------------------|
| BOULDERS         | Not Applicable            | >300                                            | >12                                          |
| COBBLES          | Not Applicable            | 75 to 300                                       | 3 to 12                                      |
| GRAVEL           | Coarse<br>Fine            | 19 to 75<br>4.75 to 19                          | 0.75 to 3<br>(4) to 0.75                     |
| SAND             | Coarse<br>Medium<br>Fine  | 2.00 to 4.75<br>0.425 to 2.00<br>0.075 to 0.425 | (10) to (4)<br>(40) to (10)<br>(200) to (40) |
| SILT/CLAY        | Classified by plasticity  | <0.075                                          | < (200)                                      |

### GRADATIONAL COMPONENT TERMS

| % (by mass) | Term         |
|-------------|--------------|
| ≤ 5         | Use "trace"  |
| > 5 to ≤ 12 | Use "few"    |
| > 12 to <30 | Use "little" |
| ≥ 30 to <50 | Use "some"   |
| ≥ 50        | Use "mostly" |

### PENETRATION RESISTANCE

#### Standard Penetration Resistance (SPT), N:

The number of blows by a 63.5 kg (140 lb) hammer dropped 760 mm (30 in.) required to drive a 50 mm (2 in.) split-spoon sampler for a distance of 300 mm (12 in.). Values reported are as recorded in the field and are uncorrected.

#### Cone Penetration Test (CPT)

An electronic cone penetrometer with a 60° conical tip and a project end area of 10 cm<sup>2</sup> pushed through ground at a penetration rate of 2 cm/s. Measurements of tip resistance ( $q_t$ ), porewater pressure ( $u$ ) and sleeve frictions are recorded electronically at 25 mm penetration intervals.

#### Dynamic Cone Penetration Resistance (DCPT); Nd:

The number of blows by a 63.5 kg (140 lb) hammer dropped 760 mm (30 in.) to drive uncased a 50 mm (2 in.) diameter, 60° cone attached to "A" size drill rods for a distance of 300 mm (12 in.).

**PH:** Sampler advanced by hydraulic pressure

**PM:** Sampler advanced by manual pressure

**WH:** Sampler advanced by static weight of hammer

**WR:** Sampler advanced by weight of sampler and rod

| UC              | unconfined compression test                                                                         |
| UU              | unconsolidated undrained triaxial test                                                              |
| V (FV)          | field vane (LV-laboratory vane test)                                                                |
| γ               | unit weight                                                                                         |

1. Tests anisotropically consolidated prior to shear are shown as CAD, CAU.

### NON-COHESIVE (COHESIONLESS) SOILS

#### Compactness<sup>2</sup>

| Term       | SPT 'N' (blows/0.3m) <sup>1</sup> |
|------------|-----------------------------------|
| Very Loose | 0 to 4                            |
| Loose      | 4 to 10                           |
| Compact    | 10 to 30                          |
| Dense      | 30 to 50                          |
| Very Dense | >50                               |

- SPT 'N' in general accordance with ASTM D1586, uncorrected for the effects of overburden pressure.
- Definition of compactness terms are based on SPT 'N' ranges as provided in Terzaghi, Peck and Mesri (1996). Many factors affect the recorded SPT 'N' value, including hammer efficiency (which may be greater than 60% in automatic trip hammers), overburden pressure, groundwater conditions, and grain size. As such, the recorded SPT 'N' value(s) should be considered only an approximate guide to the soil compactness. These factors need to be considered when evaluating the results, and the stated compactness terms should not be relied upon for design or construction.

#### Field Moisture Condition

| Term  | Description                                                   |
|-------|---------------------------------------------------------------|
| Dry   | Soil flows freely through fingers.                            |
| Moist | Soils are darker than in the dry condition and may feel cool. |
| Wet   | As moist, but with free water forming on hands when handled.  |

### COHESIVE SOILS

#### Consistency

| Term       | Undrained Shear Strength (kPa) | SPT 'N' <sup>1,2</sup> (blows/0.3m) |
|------------|--------------------------------|-------------------------------------|
| Very Soft  | <12                            | 0 to 2                              |
| Soft       | 12 to 25                       | 2 to 4                              |
| Firm       | 25 to 50                       | 4 to 8                              |
| Stiff      | 50 to 100                      | 8 to 15                             |
| Very Stiff | 100 to 200                     | 15 to 30                            |
| Hard       | >200                           | >30                                 |

- SPT 'N' in general accordance with ASTM D1586, uncorrected for overburden pressure effects; approximate only.
- SPT 'N' values should be considered ONLY an approximate guide to consistency; for sensitive clays (e.g., Champlain Sea clays), the N-value approximation for consistency terms does NOT apply. Rely on direct measurement of undrained shear strength or other manual observations.

#### Water Content

| Term   | Description                                                |
|--------|------------------------------------------------------------|
| w < PL | Material is estimated to be drier than the Plastic Limit.  |
| w ~ PL | Material is estimated to be close to the Plastic Limit.    |
| w > PL | Material is estimated to be wetter than the Plastic Limit. |

## LIST OF SYMBOLS

Unless otherwise stated, the symbols employed in the report are as follows:

### I. GENERAL

|             |                                       |
|-------------|---------------------------------------|
| $\pi$       | 3.1416                                |
| $\ln x$     | natural logarithm of x                |
| $\log_{10}$ | x or log x, logarithm of x to base 10 |
| g           | acceleration due to gravity           |
| t           | time                                  |

### II. STRESS AND STRAIN

|                                |                                                                            |
|--------------------------------|----------------------------------------------------------------------------|
| $\gamma$                       | shear strain                                                               |
| $\Delta$                       | change in, e.g. in stress: $\Delta \sigma$                                 |
| $\varepsilon$                  | linear strain                                                              |
| $\varepsilon_v$                | volumetric strain                                                          |
| $\eta$                         | coefficient of viscosity                                                   |
| $\nu$                          | Poisson's ratio                                                            |
| $\sigma$                       | total stress                                                               |
| $\sigma'$                      | effective stress ( $\sigma' = \sigma - u$ )                                |
| $\sigma'_{vo}$                 | initial effective overburden stress                                        |
| $\sigma_1, \sigma_2, \sigma_3$ | principal stress (major, intermediate, minor)                              |
| $\sigma_{oct}$                 | mean stress or octahedral stress<br>$= (\sigma_1 + \sigma_2 + \sigma_3)/3$ |
| $\tau$                         | shear stress                                                               |
| u                              | porewater pressure                                                         |
| E                              | modulus of deformation                                                     |
| G                              | shear modulus of deformation                                               |
| K                              | bulk modulus of compressibility                                            |

### III. SOIL PROPERTIES

#### (a) Index Properties

|                    |                                                                                                      |
|--------------------|------------------------------------------------------------------------------------------------------|
| $\rho(\gamma)$     | bulk density (bulk unit weight)*                                                                     |
| $\rho_d(\gamma_d)$ | dry density (dry unit weight)                                                                        |
| $\rho_w(\gamma_w)$ | density (unit weight) of water                                                                       |
| $\rho_s(\gamma_s)$ | density (unit weight) of solid particles                                                             |
| $\gamma'$          | unit weight of submerged soil<br>( $\gamma' = \gamma - \gamma_w$ )                                   |
| $D_R$              | relative density (specific gravity) of solid particles ( $D_R = \rho_s / \rho_w$ ) (formerly $G_s$ ) |
| e                  | void ratio                                                                                           |
| n                  | porosity                                                                                             |
| S                  | degree of saturation                                                                                 |

#### (a) Index Properties (continued)

|             |                                                                                      |
|-------------|--------------------------------------------------------------------------------------|
| w           | water content                                                                        |
| $w_l$ or LL | liquid limit                                                                         |
| $w_p$ or PL | plastic limit                                                                        |
| $I_p$ or PI | plasticity index = $(w_l - w_p)$                                                     |
| NP          | nonplastic                                                                           |
| $w_s$       | shrinkage limit                                                                      |
| $I_L$       | liquidity index = $(w - w_p) / I_p$                                                  |
| $I_C$       | consistency index = $(w_l - w) / I_p$                                                |
| $e_{max}$   | void ratio in loosest state                                                          |
| $e_{min}$   | void ratio in densest state                                                          |
| $I_D$       | density index = $(e_{max} - e) / (e_{max} - e_{min})$<br>(formerly relative density) |

#### (b) Hydraulic Properties

|   |                                                         |
|---|---------------------------------------------------------|
| h | hydraulic head or potential                             |
| q | rate of flow                                            |
| v | velocity of flow                                        |
| i | hydraulic gradient                                      |
| k | hydraulic conductivity<br>(coefficient of permeability) |
| j | seepage force per unit volume                           |

#### (c) Consolidation (one-dimensional)

|             |                                                       |
|-------------|-------------------------------------------------------|
| $C_c$       | compression index<br>(normally consolidated range)    |
| $C_r$       | recompression index<br>(over-consolidated range)      |
| $C_s$       | swelling index                                        |
| $C_\alpha$  | secondary compression index                           |
| $m_v$       | coefficient of volume change                          |
| $C_v$       | coefficient of consolidation (vertical direction)     |
| $C_h$       | coefficient of consolidation (horizontal direction)   |
| $T_v$       | time factor (vertical direction)                      |
| U           | degree of consolidation                               |
| $\sigma'_p$ | pre-consolidation stress                              |
| OCR         | over-consolidation ratio = $\sigma'_p / \sigma'_{vo}$ |

#### (d) Shear Strength

|                  |                                                          |
|------------------|----------------------------------------------------------|
| $\tau_p, \tau_r$ | peak and residual shear strength                         |
| $\phi'$          | effective angle of internal friction                     |
| $\delta$         | angle of interface friction                              |
| $\mu$            | coefficient of friction = $\tan \delta$                  |
| $c'$             | effective cohesion                                       |
| $c_u, s_u$       | undrained shear strength ( $\phi = 0$ analysis)          |
| p                | mean total stress $(\sigma_1 + \sigma_3)/2$              |
| $p'$             | mean effective stress $(\sigma'_1 + \sigma'_3)/2$        |
| q                | $(\sigma_1 - \sigma_3)/2$ or $(\sigma'_1 - \sigma'_3)/2$ |
| $q_u$            | compressive strength $(\sigma_1 - \sigma_3)$             |
| $S_t$            | sensitivity                                              |

\* Density symbol is  $\rho$ . Unit weight symbol is  $\gamma$  where  $\gamma = \rho g$  (i.e. mass density multiplied by acceleration due to gravity)

Notes: 1  
2

$$\tau = c' + \sigma' \tan \phi'$$

$$\text{shear strength} = (\text{compressive strength})/2$$

RECORD OF BOREHOLE: BH-3

Sheet 1 of 1

CLIENT: Shrewsberry & Associates

PROJECT: RFTA Geotechnical Investigation

PROJECT NO: 20365011

LOCATION: Glenwood Springs, CO, USA

DATE: May 01, 2023

INCLINATION: 90.0°

CONTRACTOR: Dakota Drilling

ELEVATION: 5802.0 ft (Ground)

COORDINATES: Lat: 39.557472° Long: -107.354639°

COORD SYS: Geographical Coordinates

DATE: Jul 13, 2023

RECORD OF BOREHOLE: BH-5

Sheet 1 of 1

CLIENT: Shrewsberry & Associates

PROJECT: RFTA Geotechnical Investigation

PROJECT NO: 20365011

LOCATION: Greenwood Springs, CO, USA

DATE: May 01, 2023

INCLINATION: 90.0°

CONTRACTOR: Dakota Drilling

ELEVATION: 5810.0 ft (Ground)

COORDINATES: Lat: 39.557354° Long: -107.354186°

COORD SYS: Geographical Coordinates

HORZ DATUM: NAD83 VERT DATUM: NAVD88

## SCOPE

This report presents the results of our Geologic Hazards Evaluation for the proposed development of the Roaring Fork Transit Authority (RFTA) Expansion Project at 2307 Wulfsohn Road in Glenwood Springs, Colorado. Our investigation was performed to identify geologic hazards present on the property. Our report includes descriptions of historic and current site conditions, site geology, and geologic hazards. We believe our report is in general conformance with our understanding of the intent of the Glenwood Springs City Code.

The report contains descriptions of mapped geology, site conditions observed during site reconnaissance, and geologic hazards. The report is based on review of available previous investigations, mapping, plans, site reconnaissance, and our understanding of proposed construction. If plans or grades change, this report and its contents may require revision; we should be made aware of design changes. Other types of construction may require revision of this report and the recommended design criteria.

## SITE CONDITIONS AND SITE HISTORY

The property is located at 2307 Wulfsohn Road in Glenwood Springs, Colorado. A RFTA facility is north of the site. A site visit was made on August 28<sup>th</sup> to observe current site conditions. A berm runs along the southern end of the site and is part of a catchment basin/debris pond system upslope of the property. The property sits on the western toe of a debris fan that originates from the north face of Red Mountain. The site slopes towards the north/northwest. The property is currently being used as a parking area. An aerial photograph of the site is shown on Photo 1.

The property was previously occupied by a Municipal Operations Center (MOC) that was owned by the City of Glenwood Springs. The structure was stepped into the natural slope of the site, with the upper (south) part of the building having one story and the northern part of the structure having a lower level with partial upper-level floor. We

believe site grades were achieved by minor cuts and fills. The structure experienced issues related to subsurface wetting and settlement and was ultimately deconstructed.

## PROPOSED CONSTRUCTION

The new building footprint is proposed on the benched area of the property that was graded after deconstruction of the MOC building. We understand the new RFTA building will be a one and two-story, steel-framed structure that will step-down to the north. The main level of the building will be used for bus parking. Preliminary plans indicate the structure is planned to be supported on drilled shafts with lengths on the order of 50 to 80 feet and diameters of 48 to 60 inches. Compaction grouting to greater depths is being considered. Keller NA is providing design-build services for the building foundation system.

To achieve proposed grades, excavations will be made into the berm running along the southern portion of the site. The excavation will be retained with a soil nail wall with reinforced shotcrete. A retaining wall will also be constructed downslope of the proposed structure. The downslope earth retention system will consist of a soil nail and reinforced shotcrete wall behind and below a GRS wall. The earth retention systems design and construction are the responsibility of GSI, the design-build subcontractor.

## PREVIOUS CTL|THOMPSON, INC. INVESTIGATIONS

CTL has performed numerous investigations of the RFTA property. The following reports were reviewed in preparation of this report:

- Geologic and Preliminary Geotechnical Investigation – Glenwood Meadows (Project No. GS-2871; report dated February 1, 2000)
- Geotechnical Investigation – Glenwood Springs Municipal Operations Center (MOC) (Project No. GS05594-125; report dated October 13, 2011)
- Geotechnical Engineering Investigation – RFTA Facility Expansion (Project No. GS06668.000-125; report dated February 14, 2022)

- Supplemental Geotechnical Engineering Investigation – RFTA Facility Expansion (Project No. GS06668.000-125; report dated April 6, 2022)
- Geotechnical Engineering Investigation – RFTA Facility Expansion (Project No. GS06668.000-125; report dated July 21, 2022)

## SITE GEOLOGY

According to the “Geologic Map of the Glenwood Springs Quadrangle, Garfield County, Colorado” (Kirkham, R.M., Streufert, R.K., Cappa, J.A., Shaw, C.A., Allen, J.L., and Jones, J.V., Colorado Geological Survey Map Series MS-38, 2008) and our borings within the property, the site is underlain by young debris flow deposits consisting of poorly-sorted boulder, cobble, pebble, and gravel in a fine-grained matrix. The Eagle Valley Evaporite underlies the debris flow deposits at greater depth. An excerpt from the 2008 map is reproduced below.

Figure 1 – Excerpt from the Geologic Map of the Glenwood Springs Quadrangle by Colorado Geological Survey, 2008. Approximate site location denoted by red arrow.

## **GEOLOGIC HAZARDS**

This section is intended to discuss geologic hazards present on the RFTA property and is based on field reconnaissance, review of published maps, review of provided documents, and our experience.

### **Hydrocollapsible Soils**

We reviewed Sheet 10 of the "General Geologic Hazards Map - Geologic Hazards of the Glenwood Springs Metropolitan Area, Garfield County, Colorado" prepared by Lincoln Devore Testing Laboratory in December 1977. Mapping indicates the RFTA property lies within a "zone of potential hydrocompaction and related settlement hazards" with a "severe hazard zone" rating.

The site is underlain by debris flow deposits consisting of unsorted and unstratified silt, clay, sand, gravel, cobbles, and occasional boulders to depths of at least 90 feet, as indicated by borings drilled during previous investigations. Debris flow deposits are susceptible to collapse when wetted. We understand the previous structure experienced settlement issues likely related to subsurface wetting. There is risk of hydrocollapsible soils on this site. The risk has been lowered to some degree by previous site development and associated increase in soil moisture content. It is critical that surface drainage be designed, constructed, and maintained to provide rapid removal of surface runoff. We believe the use of compaction grouting and drilled shafts for the proposed structure are positive approaches to improve support properties of the natural soils and reduce potential for differential movement of the building.

### **Debris Flows**

The property sits on the western toe of a debris fan. The fan is active and subject to periodic debris flows, mud flows, and alluvial events. The source basin for debris has reduced in size over the past several thousand years and the magnitude and frequency

of events has steadily decreased. A debris flow pond is present upslope of the site to the south. Per our review of the “Master Drainage Report for Glenwood Meadows” prepared by High Country Engineering (Project No. 2000031.000 X 316; report dated May 24, 2002), this pond was designed in conjunction with four other debris flow ponds throughout the fan to capture stormwater runoff and debris flows from contributing drainage basins, which will be released at a controlled rate through outfall structures.

At the time of our visit, there was evidence of recent deposition of finer grained material in the debris flow pond, with gravel being the approximate maximum particle size. The approximate thickness of deposition appeared to be on the order of about 1-foot. The bottom of the basin was moist at the time of our site visit; however it is difficult to discern if the material was recently deposited or if the moisture was related to a recent precipitation event. Site photos are presented below.

Photo 1: Debris flow pond, looking east. Photo obtained on August 28, 2022.

Photo 2: Debris flow pond, looking west/southwest. Photo obtained on August 28, 2022.

It appears that the debris flow pond is functioning as intended. We believe risk due to a significant debris flow event is low for the RFTA property considering the system of debris flow ponds present along the debris fan. It is critical the pond is routinely cleaned out to allow it to perform as designed.

We understand current plans include excavating into the northern side of the debris flow pond berm to allow for construction of drive lanes. The excavation will be permanently retained with a soil nail wall. Any modifications made to the debris flow pond should be evaluated to confirm it does not impact its intended design. The design volume of the basin should be taken into consideration during design of the southern retaining wall. All other criteria presented in the referenced Master Drainage Report should be considered in redevelopment of the RFTA property.

## **Rockfall**

We did not observe evidence of rockfall on the property. The mountaintops upslope from the site could be a source for rockfall, however the source material is relatively depleted and the topography of the slope above the site directs potential rockfall away from the property. We observed few boulders along the top of the southern slope of the debris flow pond, with sizes of about 1-foot by 1-foot. The boulders were covered in lichen with vegetation growing around them, indicating they did not recently fall. We do not believe rockfall poses a significant risk to the property.

## **Seismicity**

The RFTA property is located within the Western Mountain Seismotectonic Province. The West Glenwood Fault is mapped approximately 1-mile southwest of the subject site. There are several other faults that displace the Grand Hogback south of the site. These faults are considered active, however they are not considered likely to cause significant earthquakes.

Per the "Colorado Earthquake and Fault Map Server", the most recent recorded earthquake occurred on August 28, 2016 with a measured Modified Mercalli intensity V. Earthquakes of this intensity result in moderate shaking and may result in cracking of weak masonry structures. We believe ground accelerations associated with a modified intensity V earthquake can be expected at this site and structures should be designed accordingly.

## **GEOTECHNICAL RISK**

The concept of risk is an important aspect with any geotechnical evaluation primarily because the methods used to develop geotechnical recommendations do not comprise an exact science. We never have complete knowledge of subsurface conditions. Our analysis must be tempered with engineering judgment and experience.

Therefore, the recommendations presented in any geotechnical evaluation should not be considered risk-free. Our recommendations represent our judgment of those measures that are necessary to increase the chances that the structures will perform satisfactorily. It is critical that all recommendations in this report are followed during construction.

## LIMITATIONS

We believe this investigation was conducted in a manner consistent with that level of care and skill ordinarily used by geotechnical engineers practicing in this area at this time. No warranty, express or implied, is made. If we can be of further service in discussing the contents of this report or analysis of the influence of subsurface conditions on the project, please call.

## MEMORANDUM

DATE: August 20, 2024

RE: West Glenwood Roaring Fork Transit Authority Bus Facility Improvements  
Planning Submittal Drainage Memorandum Phases 6A, 6B, and 8  
SEH No. ROFTA17800

### 1.0 Intent

The goal of this memorandum is to provide planning level drainage analysis for Phases 6A, 6B, and 8 of the West Glenwood Springs Bus Facility improvements project. This planning level memorandum will discuss conceptual drainage design and their compliance with the overall drainage plan for the site.

### 2.0 Background

The project site is located in Glenwood Springs, Colorado. The existing site along Wulfsohn Road includes a bus stop, bus parking, and a park and ride area. The proposed improvements will expand this existing area into a Bus Operations Facility for Roaring Fork Transit Authority (RFTA). SEH has been contracted to work on three phases of these improvements. Phase 6A is the Transit Center and will include a single building to be used as a transportation hub, bus pickup/dropoff areas, and parking. Phase 6A is located between Wulfsohn Road and Midland Avenue. Phase 6B is the Administration Building and associated parking located to the south of Wulfsohn Road. Phase 8 is Storage Building A located on the southwest corner of the Bus Operations Facility.

SEH is 100% employee-owned | [sehinc.com](http://sehinc.com) | 720.540.6800 | 800.490.4966 | 888.908.8166 fax

### **3.0 Existing Condition**

The existing site is partially developed. Phases 6A and 6B have existing parking lots. Phase 8 is located on an area that is partially parking and partially undeveloped in the existing condition. The site is steep and generally flows to the northwest. The majority of the site drains to three ponds that are connected in series on the northwest portion of the property near the intersection of Wulfsohn Road and Midland Avenue.

The Phase 6A project site is approximately 5.00 acres with a total impervious value of 43.9%. The area generally flows over land to the west where it is collected in an existing pond. An Existing Drainage Map can be found attached to this memo.

The Phase 6B project site is approximately 1.85 acres with a total impervious value of 55.4%. The area generally flows over land to the west where it is collected in an existing area inlet and conveyed north via storm sewer to an existing pond. An Existing Drainage Map can be found attached to this memo.

Phase 8 is approximately 0.22 acres. With an impervious value of approximately 32.0%. Runoff from the area is conveyed overland to the west and then north via the existing storm system to an existing pond.

### **4.0 Existing Drainage Studies**

A Drainage Report for the RFTA Bus Operations Facility Improvements was completed by SGM in April of 2022. The study looked at the overall proposed site's impact on existing infrastructure including the existing ponds. This study was used as a reference to assess the affects the proposed improvements in Phases 6A, 6b, and 8 will have on the existing ponds and storm system. Excerpts from the Drainage Report can be found attached to this memo.

### **5.0 Criteria**

The drainage design criteria used for memorandum, and to be used in the proposed design of the site will be from Glenwood Springs Engineering Standards and Mile High Flood District Urban Storm Drainage Criteria Manual.

### **6.0 Proposed Design**

The proposed design of this site will look to use the existing infrastructure where possible to convey flows to the existing ponds on the northwest side of the site as laid out in the SGM Drainage Report.

#### **6.1 Phase 6A**

Phase 6A will have a proposed area of 4.93 acres and proposed impervious value of 66.5%. Runoff from the proposed site will be collected via curb and gutter and directed to inlets and conveyed to an underground water quality and detention facility via storm sewer. This underground storage facility will take the place of the existing pond. The facility will be sized to provide water quality treatment and flood attenuation for the majority of the proposed impervious area of the Phase 6A site. A Proposed Drainage Map can be found attached to this memo.

#### **6.2 Phase 6B**

Phase 6B will have a proposed area of 2.07 acres and proposed impervious value of 60.8%. Flows from phase 6B will be conveyed to a proposed inlet in the proposed parking lot and conveyed west via proposed storm sewer where it connects to the existing storm system. Flows will then be conveyed north to the existing pond.

### 6.3 Phase 8

Phase 8 is approximately 0.22 acres. With an impervious value of approximately 77.0%. Phase 8 will have minimal storm design. The proposed storage building will be located at the bottom of a steep slope. A swale will be constructed to divert runoff to the west where it will be collected by the existing storm system and conveyed to the north to the existing pond.

### 7.0 Conclusion

The final proposed design to be completed in future submittals will comply with design criteria laid out in the Glenwood Springs Engineering Standards and Mile High Flood District Urban Storm Drainage Criteria Manual. The proposed design will conform to the overall drainage plan laid out in SGM's Drainage Report.

Impervious area from Phase 6A will be conveyed to an underground storage facility which will provide water quality treatment and provide storage to allow for historic release rates.

Phase 6B will increase the existing impervious value from 55.4% to 60.8% while increasing the area from 1.85 acres to 2.07 acres. The proposed site will be less than the 69.2% imperviousness accounted for by the overall drainage plan. The site for Phase 6B lies mostly within basin 670 with a portion of basin 600 from SGM's Drainage Report. All of the Phase 6B site is accounted for in the report and directed to the existing pond. As the proposed site has lower impervious value than the pond was designed for, Phase 6B improvements will not negatively impact the existing pond.

The storage building in Phase 8 is accounted for in SGM's Drainage report. Storage Building A is shown in the RFTA Master Layout Exhibit within the Report and flows have been analyzed with the additional impervious area of this building are accounted for in the existing storm system and the existing pond and will therefore cause no adverse effects.

# Technical Memorandum

## File and Literature Review for Archaeological Resources

### Glenwood Maintenance Facility, Phases 6A, 6B, and 8

### Garfield County, Colorado

*Prepared for—*

*Roaring Fork Transportation Authority*

*July 3, 2024*

On behalf of the Roaring Fork Transportation Authority (RFTA), ERO Resources Corporation (ERO) conducted an archaeological file review for the proposed Glenwood Maintenance Facility (project). The project involves expansion of the existing maintenance facility located near the Wulfsohn Road and Midland Avenue intersection on the north side of Glenwood Springs in Garfield County, Colorado. Because RFTA is using a grant from the Federal Transit Administration (FTA), the project requires reviews under the National Environmental Policy Act and must consider potential effects on archaeological resources pursuant to Section 106 (54 United States Code [U.S.C.] § 306108) of the National Historic Preservation Act (NHPA, 1966, as amended; 54 U.S.C. § 300101 et seq.). The Colorado Department of Transportation is coordinating the Section 106 compliance process on behalf of the FTA. ERO conducted a file search and literature review to identify known or potential archaeological resources that may be impacted by the project.

## **Project Description**

RFTA proposes to renovate and expand its current maintenance facility into a new centrally located operations, maintenance, and administrative center called the Regional Transit Center (RTC). The RTC will function as the main regional transit center for RFTA. The RTC will address RFTA's current operational deficiencies and accommodate forecasted growth in population, employment, and ridership demand in RFTA's three-county service area. The RTC will provide sufficient bus storage, operations, maintenance, and administrative capacity and capability to support RFTA's long-term vision of creating greater connectivity between local, regional, and statewide transit systems. The RTC project includes 10 phases (Table 1). This technical memorandum addresses Section 106 compliance needs for Phases 6A, 6B, and 8.

**Table 1. Project phases.**

| Phase | Scope                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Lowering and grading the existing grade and construction of a temporary bus parking lot (for maintaining operations during future phases).                                                                                                   |
| 2     | Additional grading and excavation and renovation and expansion of a fleet maintenance building.                                                                                                                                              |
| 3     | Demolition, grading, excavation, and site preparation. Construction of a new Operations Center, Bus Storage Building A (with 30 indoor bus storage spaces), pre-trip bus inspection zones, bus backlog parking, and Maintenance Warehouse A. |
| 4     | Glenwood Maintenance Facility Administration building renovation. Relocate access road.                                                                                                                                                      |
| 5     | Construction of Bus Building 30B, associated drives, and pre-trip bus inspection zones.                                                                                                                                                      |
| 6     | <b>Construction of RFTA Transit Center (6A) and Administration Building (6B) with associated drives and parking area.</b>                                                                                                                    |
| 7     | Construction of bus fueling drive lanes and a bus wash area.                                                                                                                                                                                 |
| 8     | <b>Construction of Warehouse B, associated drives, and parking area.</b>                                                                                                                                                                     |
| 9     | Construction of RFTA Housing Phase 1 with associated drives and parking.                                                                                                                                                                     |
| 10    | Construction of RFTA Housing Phase 2 with associated drives and parking.                                                                                                                                                                     |

## Project Area

The project area includes all areas of potential ground disturbance for the project including construction staging and access (8.43 acres). The project area overlaps existing roads and areas of previous disturbance. The legal location is the southwest quarter of Section 5 and the southwest quarter of Section 6, Township 6 South, Range 89 West of the 6<sup>th</sup> Principal Meridian in Garfield County, Colorado (Figure 1 and Figure 2, attached).

## Methodology

The purpose of the cultural resource file and literature review is to determine if any previously documented cultural resources listed in or eligible for listing in the National Register of Historic Places (NRHP) or State Register of Historic Places (SRHP) could be impacted by the proposed project. A “cultural resource” is defined as an archaeological site, structure, or building constructed 50 or more years ago (Little et al. 2000). For this project, a 45-year age criterion was used as a buffer in the event the project is delayed after Section 106 consultation is completed. This review is focused on archaeological sites. A cultural resource listed in or eligible for listing in the NRHP/SRHP is a “historic property.” To assist with project planning and potential consultation obligations under Section 106 of the NHPA (36 Code of Federal Regulations 800) and the State Register Act, Colorado Revised Statutes 34-80.1-104, ERO reviewed the previous cultural resource surveys and resource documentation completed in the project area and a 0.5-mile buffer by conducting a file search with the Office of Archaeology and Historic Preservation (OAHP). The OAHP provided the results to ERO on June 7, 2024 (File Search No. 26272) (Figure 3, attached).

## Results

The file search identified eight previously conducted cultural resource surveys that intersect the file search area (Table 2). Of these, two surveys intersect the project area (GF.CH.R5 and MC.PA.R78). Survey MC.PA.R78 covers the entire project area.

**Table 2. Previous cultural inventories within the project area and 0.5-mile buffered file search area.**

| Survey ID   | Report Title (Date)                                                                                                                                                                                                                | Institution                                                   |

| MC.PA.R78   | <i>Class III Cultural Resources Survey for the Roaring Fork Transportation Authority Bus Rapid Transit Project Along Colorado State Highway 82, Garfield, Eagle, and Pitkin Counties, Colorado (2010)</i>                          | FTA                                                           |

The OAHP records indicate seven previously documented historical resources are located within the 0.5-mile buffer file search area (see *Technical Memorandum, File and Literature Review for Historical Resources Glenwood Maintenance Facility, Phases 6A, 6B, and 8, Garfield County, Colorado*). No previously documented archaeological resources intersect the file search area.

In addition to the OAHP file search, ERO reviewed historical maps (General Land Office 1885; U.S. Geological Survey 1930, 1963, 1968) and imagery to determine if historical archaeological sites may have been previously located in the project area. Maps do not indicate the presence of any potential archaeological resources in the project area. Aerial imagery shows that nearly the entire project area was disturbed by the construction of Wulfsohn Road, the parking lots, and utilities from 2002 to 2023 (Google, Inc. 2024). Approximately two small areas totaling 0.03 acre appear to remain intact along the east side of the project area. Trees that predate construction activities remain standing in these areas.

## Summary

The file search was conducted with a 0.5-mile buffer around the project area. No archaeological resources have been previously documented in the file search area. The project area was completely surveyed in 2010 (MC.PA.R78). The project area has been thoroughly disturbed by construction activities related to the facility; 0.03 acre or less (less than 1 percent) of land appears not to have been disturbed. Therefore, a cultural resource survey is unlikely to identify any additional archaeological resources in the project area.

# Technical Memorandum

## File and Literature Review for Historical Resources

### Glenwood Maintenance Facility, Phases 6A, 6B, and 8

### Garfield County, Colorado

*Prepared for—*

*Roaring Fork Transportation Authority*

*July 3, 2024*

On behalf of the Roaring Fork Transportation Authority (RFTA), ERO Resources Corporation (ERO) conducted a historic file review for the proposed Glenwood Maintenance Facility (project). The project involves expansion of the existing maintenance facility located near the Wulfsohn Road and Midland Avenue intersection on the north side of Glenwood Springs in Garfield County, Colorado. Because RFTA is using a grant from the Federal Transit Administration (FTA), the project requires reviews under the National Environmental Policy Act and must consider potential effects on historical resources pursuant to Section 106 (54 United States Code [U.S.C.] § 306108) of the National Historic Preservation Act (NHPA, 1966, as amended; 54 U.S.C. § 300101 et seq.). The Colorado Department of Transportation (CDOT) is coordinating the Section 106 compliance process on behalf of the FTA. ERO conducted a file search and literature review to identify known or potential historical resources that may be impacted by the project.

## **Project Description**

RFTA proposes to renovate and expand its current maintenance facility into a new centrally located operations, maintenance, and administrative center called the Regional Transit Center (RTC). The RTC will function as the main regional transit center for RFTA. The RTC will address RFTA's current operational deficiencies and accommodate forecasted growth in population, employment, and ridership demand in RFTA's three-county service area. The RTC will provide sufficient bus storage, operations, maintenance, and administrative capacity and capability to support RFTA's long-term vision of creating greater connectivity between local, regional, and statewide transit systems. The RTC project includes 10 phases (Table 1). This technical memorandum addresses Section 106 compliance needs for Phases 6A, 6B, and 8. See the attached *Design Plans* for additional details on the proposed work for Phases 6A, 6B, and 8.

**Table 1. Project phases.**

| Phase | Scope                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Lowering and grading the existing grade and the construction of a temporary bus parking lot (for maintaining operations during future phases).                                                                                               |
| 2     | Additional grading and excavation and renovation and expansion of a fleet maintenance building.                                                                                                                                              |
| 3     | Demolition, grading, excavation, and site preparation. Construction of a new Operations Center, Bus Storage Building A (with 30 indoor bus storage spaces), pre-trip bus inspection zones, bus backlog parking, and Maintenance Warehouse A. |
| 4     | Glenwood Maintenance Facility Administration building renovation. Relocate access road.                                                                                                                                                      |
| 5     | Construction of Bus Building 30B, associated drives, and pre-trip bus inspection zones.                                                                                                                                                      |
| 6     | <b>Construction of RFTA Transit Center (6A) and Administration Building (6B) with associated drives and parking area.</b>                                                                                                                    |
| 7     | Construction of bus fueling drive lanes and a bus wash area.                                                                                                                                                                                 |

## Area of Potential Effects

The area of potential effects (APE) incorporates the project area where all potential ground disturbance may take place including construction staging and access may occur. Because the project proposes to expand an existing facility, the APE also accommodates possible visual impacts by incorporating a 500-foot buffer around the project area that intersects all adjacent parcels (69.54 acres). The legal location is Sections 5 through 8, Township 6 South; Range 89 West of the 6<sup>th</sup> Principal Meridian in Garfield County, Colorado (Figure 1 and Figure 2, attached).

## Methodology

The purpose of the cultural resource file and literature review is to determine if any previously documented cultural resources listed in or eligible for listing in the National Register of Historic Places (NRHP) or State Register of Historic Places (SRHP) could be impacted by the proposed project. A “cultural resource” is defined as an archaeological site, structure, or building constructed 50 or more years ago (Little et al. 2000). For this project, a 45-year age criterion was used as a buffer in the event the project is delayed after Section 106 consultation is completed. This review is focused on cultural resources that are part of the built environment rather than archaeological sites. A cultural resource listed in or eligible for listing in the NRHP/SRHP is a “historic property.” To assist with project planning and potential consultation obligations under Section 106 of the NHPA (36 Code of Federal Regulations [CFR] 800) and the State Register Act, Colorado Revised Statutes 34-80.1-104, ERO reviewed the previous cultural resource surveys and resource documentation completed in the APE and a 0.5-mile buffer by conducting a file search with the Office of Archaeology and Historic Preservation (OAHP). The OAHP provided the results to ERO on June 7, 2024 (File Search No. 26272).

## Results

The file search identified eight previously conducted cultural resource surveys that intersect the 0.5-mile buffer surrounding the search area (Table 2). Of these, six surveys intersect the APE (DT.LM.NR187, GF.CH.R5, GF.EP.R1, MC.CH.R94, MC.LM.R639, and MC.PA.R78).

**Table 2. Previous cultural inventories within the 0.5-mile buffered file search area.**

| Survey ID   | Report Title (Date)                                                                                                                                                                                                                | Institution                                                      | Intersect the APE? |

The OAHF records indicate seven previously documented cultural resources are located within the 0.5-mile buffer file search area (Table 3; Figure 3, attached). None of the previously documented cultural resources intersect the project area but four previously documented cultural resources intersect the APE (5GF1661, 5GF1661.6, 5GF4554.13, and 5GF5595). All four cultural resources are linear resources including a railroad, transmission line, and road.

**Table 3. Previously documented cultural resources within the 0.5-mile buffered file search area.**

| Site Number | Name                                                | Eligibility               | Intersect the APE? |
|-------------|-----------------------------------------------------|---------------------------|--------------------|
| 5GF1661     | Denver and Rio Grande Western Railroad Aspen Branch | Officially eligible, 2020 | Yes                |

| Site Number | Name                                                           | Eligibility                                                                 | Intersect the APE? |
|-------------|----------------------------------------------------------------|-----------------------------------------------------------------------------|--------------------|
| 5GF1661.6   | Denver and Rio Grande Western Railroad, Aspen Branch - Segment | Officially eligible, supports eligibility of entire linear resource, 2012   | Yes                |
| 5GF1662     | Atkinson Canal                                                 | Officially eligible, 1993                                                   | No                 |
| 5GF2935.5   | U.S. Highway 6 - Segment                                       | Field eligible, supports eligibility of entire linear resource, 2012        | No                 |
| 5GF4554.13  | Shoshone - Palisade Transmission Line - Segment                | Officially needs data, supports eligibility of entire linear resource, 2012 | Yes                |
| 5GF4688     | West Glenwood Springs Historical Marker                        | Unknown, 2013                                                               | No                 |
| 5GF5595     | Midland Avenue                                                 | Officially not eligible, 2019                                               | Yes                |

ERO also reviewed the CDOT Historic Sites Viewer and Historic Streetcars of Colorado databases to see if any other previously documented cultural resources are in the APE that were not included in the OAHP file search results (Colorado Department of Transportation 2024a, 2024b). Neither database identified additional previously documented cultural resources.

Lastly, ERO reviewed historical aerial imagery and the Garfield County assessor website to determine if any undocumented historical buildings or structures are in the APE (Garfield County Assessor's Office 2024; Nationwide Environmental Title Research 2024). The project area overlaps Wulfsohn Road and three parcels owned by RFTA that contain parking lots and the existing RFTA building. Wulfsohn Road and the existing RFTA building was constructed circa 2002. The parking lots were built after 2005. The APE also intersects an RFTA warehouse constructed in 2002, the Midland Center constructed circa 2005, a greenhouse at 51359 Highway 6 constructed in 2016, TRUE Automotive constructed in 1995, White Water Rafting constructed in 1995, and Water Treatment Plant Road constructed in 2009 (Garfield County Assessor's Office 2024; Nationwide Environmental Title Research 2024). None of these buildings or structures meet the age criteria to be considered cultural resources.

## Visual Effects

Four previously documented cultural resources overlap the APE (5GF1661, 5GF1661.6, 5GF4554.13, and 5GF5595). The Denver and Rio Grande Western Railroad Aspen Branch (5GF1661) is officially eligible, and segment 5GF1661.6 supports its eligibility. The Shoshone - Palisade Transmission Line – Segment officially needs data but segment 5GF4554.13 was determined supporting of its potential eligibility. Lastly, Midland Avenue (5GF5595) was determined not eligible in 2019. Because Midland Avenue is not a historic property, no further discussion of the visual effects on the resource is included in this technical memorandum.

The Denver and Rio Grande Western Railroad Aspen Branch (5GF1661) was built as a narrow-gauge railroad in November 1887 as part of competition to provide the first railroad service in the Grand Valley. It was widened to standard gauge by 1890 and experienced economic success until the Panic of 1893 (Briggs and Chance 2011). The Shoshone - Palisade Transmission Line (5GF4554) was constructed in phases from 1911 until 1941. The transmission line was upgraded to 69 kilovolt specifications by the

1960s. The section through Glenwood Canyon was rerouted in 1983 to accommodate I-70 (Engleman et al. 2011). Both locations for these linear resources were chosen for economic and geographic convenience. Neither historic property was designed with a viewshed in mind.

The proposed project includes the construction of a new single-story transit center, a three-story administration building, and a single-story storage building (see attached *Design Plans*). Viewsheds of the new construction will be limited because the two historic properties are downslope of the proposed development which is adjacent to modern buildings. The steep vegetated slope and existing development, including the current RFTA building, Midland Center, and bridges, will obscure most, if not all, of the new construction while not interrupting the prominent viewshed of the surrounding mountains (Figure 4 and Figure 5). Therefore, the integrity of setting for each historic property will not be impacted by the proposed project.

**Figure 4. View toward the proposed construction (marked with an arrow) from Midland Avenue, adjacent to segment 5GF1661.6 and segment 5GF4554.13. Photo from August 2023 courtesy of Google Street View (Google, Inc. 2024).**

**Figure 5. View toward the proposed construction (marked with an arrow) from where segment 5GF1661.6 and segment 5GF4554.13 intersect Midland Avenue. Photo from August 2023 courtesy of Google Street View (Google, Inc. 2024).**

## Summary

The file search and literature review demonstrate that there are four previously documented cultural resources overlapping the APE (5GF1661, 5GF1661.6, 5GF4554.13, and 5GF5595). The Denver and Rio Grande Western Railroad Aspen Branch (5GF1661) is officially eligible and segment 5GF1661.6 supports its eligibility. The Shoshone - Palisade Transmission Line – Segment officially needs data but segment 5GF4554.13 was determined supporting of its potential eligibility. Midland Avenue (5GF5595) was determined not eligible in 2019. The proposed development will be mostly obscured from the viewsheds of 5GF1661 and 5GF4554 by a steep vegetated slope. Therefore, ERO recommends a determination of “no adverse effect” pursuant to 36 CFR 800.5 of the NHPA.

## Summary

The Roaring Fork Transit Authority (RFTA) retained ERO Resources Corporation (ERO) to provide this Biological Resources Report (BRR) for the Glenwood Maintenance Facility, Phases 6A, 6B, and 8 project (project) in Glenwood Springs, Garfield County, Colorado (project area). The following biological resources are addressed in this BRR.

**Wetlands and Other Waters of the U.S.** – Based on a desktop assessment, an ephemeral drainage with potential wetlands may occur along the eastern boundary of Phase 6A of the project area; however, these potential aquatic resources (if present) appear to be associated with a roadside drainage swale excavated in dryland that would not carry relatively permanent flow and would be excluded by the U.S. Army Corps of Engineers from being a water of the United States. The aquatic features (if present) may be subject to the State Dredge and Fill Program (Colorado Department of Public Health and Environment (CDPHE) 2024). ***If work is planned in the drainage, ERO recommends conducting a wetland delineation to determine the presence of aquatic resources as well as the need for Clean Water Act Section 404 permitting or state permitting, as appropriate.*** Additionally, a Colorado Department of Transportation (CDOT) Wetland Finding Report would be required if permanent wetland impacts exceed 500 square feet or combined temporary and permanent wetland impacts exceed 1,000 square feet.

**Noxious Weeds** – Noxious weeds have the potential to occur in the project area. ***ERO recommends CDOT Specifications for Noxious Weed Management be incorporated into the project construction documents.***

**Federally Listed Threatened and Endangered Species** – The project area does not contain habitat for any federally listed threatened or endangered species. No further action is necessary regarding federally listed threatened and endangered species.

**State-Listed Threatened and Endangered Species and Species of Concern** – The project area is located in a Colorado Parks and Wildlife (CPW) mapped area of Bald Eagle winter range and Bald Eagle winter forage area. Because of the ambient level of human disturbance in the project area and surrounding areas, ERO biologists concluded that the project activities would not likely disturb Bald Eagles potentially using the winter range or winter forage areas. Additionally, wetlands (if present) in the project area provide potential habitat for northern leopard frog; however, the northern leopard frog is unlikely to occur in the project area since it lacks permanent waterbodies.

**Other Wildlife** – The project area is located in High Priority Habitat for Elk Severe Winter Range mapped by CPW. The project area is predominantly impervious surfaces and existing disturbed areas adjacent to the existing facilities; however, surrounding the project area, suitable foraging habitat occurs for a variety of wildlife including black bear, elk, mountain lion, and mule deer. The project area is shown as occurring in black bear overall range, black bear fall concentration area, elk overall range, elk winter range, elk severe winter range, moose overall range, moose summer range, moose winter range, mountain lion overall range, mule deer overall range, mule deer winter range, and mule deer summer range. Due to the existing activities in the vicinity, the proposed project is unlikely to impede wildlife movement in the project area; however, during construction, wildlife could be temporarily disturbed by construction activities. ***ERO recommends contacting the local CPW district manager and requesting concurrence that the proposed project would not likely affect wintering ungulates.***

**Migratory Birds and Raptors** – Vegetation in and adjacent to the project area provides habitat for a variety of migratory birds including Bald Eagle. The Denver Field Office of the U.S. Fish and Wildlife Service (2009) and CDOT (2011) have identified the primary nesting season for migratory birds in eastern Colorado as occurring from April 1 through August 31. However, some birds, such as the Red-Tailed Hawk and Great Horned Owl, can nest as early as February or March. Because of variability in the breeding seasons of various bird species, ***ERO recommends a nest survey be conducted within one week prior to construction*** to determine if any active nests are present in the project area so they can be avoided. If active nests are found, any work that would destroy the nests could not be conducted until the birds have vacated the nests. If possible, ground-clearing activities should occur outside of the April 1 through August 31 migratory bird breeding season. If construction activities would occur during the migratory bird breeding season, a nest survey should be conducted immediately prior to construction.

**Colorado Shortgrass Prairie Initiative (SGPI)** – The project area is located outside of CDOT’s mapped area for SGPI consultation. As such, no further action under SGPI is necessary.

**Senate Bill 40 (SB40) Regulated Areas** – No streams that fall under SB40 regulation occur in the project area; therefore, the project does not require SB40 Wildlife Certification.

# **Biological Resources Report Glenwood Maintenance Facility, Phases 6A, 6B, and 8 Glenwood Springs, Colorado**

**July 29, 2024**

## **Introduction**

The Roaring Fork Transit Authority (RFTA) retained ERO Resources Corporation (ERO) to provide this Biological Resources Report (BRR) for the Glenwood Maintenance Facility, Phases 6A, 6B, and 8 project (project) in Glenwood Springs, Garfield County, Colorado (project area; Figure 1 and Figure 2).

This BRR presents the findings of a desktop review, and no 2024 site visit was performed as part of this assessment (2024 desktop review). The 2024 desktop review was informed by field studies previously conducted in 2020 for earlier phases of the overall project. During the 2024 desktop review, activities included analyzing potential wetlands; identifying federal- and state-listed threatened, endangered, candidate, and proposed (T&E) species habitat; and identifying other natural resources that might affect the proposed project. This BRR provides information on site conditions and resources as well as current regulatory requirements related to those resources.

## **Project Description**

RFTA proposes to renovate and expand its current maintenance facility into a new centrally located operations, maintenance, and administrative center called the Regional Transit Center (RTC). The RTC will function as the main regional transit center for RFTA. The RTC will address RFTA's current operational deficiencies and accommodate forecasted growth in population, employment, and ridership demand in RFTA's three-county service area. The RTC will provide sufficient bus storage, operations, maintenance, and administrative capacity and capability to support RFTA's long-term vision of creating greater connectivity between local, regional, and statewide transit systems as shown in the project phases in Table 1.

**Table 1. Project phases.**

| Phase | Scope                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Lowering and grading the existing grade and construction of a temporary bus parking lot (for maintaining operations during future phases).                                                                                                                                        |
| 2     | Additional grading and excavation, and renovation and expansion of a fleet maintenance building.                                                                                                                                                                                  |
| 3     | <b>Demolition, grading, excavation, and site preparation of the area shown on Figure 2. Construction of a new Operations Center, Bus Storage Building A (with 30 indoor bus storage spaces), pre-trip bus inspection zones, bus backlog parking, and Maintenance Warehouse A.</b> |
| 4     | <b>Glenwood Maintenance Facility Administration building renovation. Relocate access road.</b>                                                                                                                                                                                    |
| 5     | <b>Construction of Bus Building 30B, associated drives, and pre-trip bus inspection zones.</b>                                                                                                                                                                                    |
| 6     | Construction of RFTA Administration Building with associated drives and parking area.                                                                                                                                                                                             |
| 7     | <b>Construction of bus fueling drive lanes and a bus wash area.</b>                                                                                                                                                                                                               |
| 8     | <b>Construction of Warehouse B, associated drives, and parking area.</b>                                                                                                                                                                                                          |
| 9     | Construction of RFTA Housing Phase 1 with associated drives and parking.                                                                                                                                                                                                          |
| 10    | Construction of RFTA Housing Phase 2 with associated drives and parking.                                                                                                                                                                                                          |

## Methods

During the 2024 desktop review, ERO analyzed available data to review and document biological resources in the project area. Any notable biological resources identified were recorded using aerial photographs. Specific methods for assessing biological resources included the following:

- **Waters of the U.S. (WOTUS), including wetlands:** ERO reviewed the U.S. Geological Survey (USGS) Glenwood Springs, CO topographic quadrangle map, National Wetland Inventory (NWI), National Hydrography Dataset (NHD), and aerial photography to identify mapped streams, areas of open water, and potential areas that could indicate wetlands or WOTUS.
- **Noxious weeds:** The potential for noxious weeds to occur in the project area was assessed using data gathered from the 2020 site visit.
- **Federally listed T&E species:** ERO reviewed the U.S. Fish and Wildlife Service (Service) list of federally listed species to identify T&E species having potential habitat in the project area and evaluated project conditions for suitable habitat for these species.
- **State-listed T&E species:** ERO reviewed the Colorado Parks and Wildlife (CPW) list of state-listed species to identify T&E species and species of concern having potential habitat in the project area and evaluated project conditions for suitable habitat for these species.
- **Wildlife:** ERO conducted a literature and database review of the Colorado T&E species list (CPW 2023a), CPW high-priority habitat (CPW 2021b), and other species wildlife data (CPW 2023b; CNHP 2024).
- **Migratory birds and raptors:** ERO reviewed the CPW nest database for any known nests within 0.5 mile of the project area (CPW 2023d).
- **Colorado Shortgrass Prairie Initiative (SGPI):** ERO conducted a site evaluation of the project area per the SGPI (Granau, Lee et al. 2003). The SGPI generally covers areas in Colorado east of Interstate 25 (I-25), with some smaller areas west of I-25.
- **Senate Bill 40 (SB40) regulated areas:** ERO assessed the project area for areas regulated under SB40 Wildlife Certification by reviewing USGS topographic maps (Figure 1) and the SB40 Wildlife Certification Guidelines (CPW and CDOT 2022).

## Observations and Results

### General Site Conditions, Vegetation Communities, and Wildlife Habitat

The project area is located south of the intersection of Wolfsohn Road and Midland Avenue, just south of the Colorado River and I-70 in Glenwood Springs, Colorado (Figure 1). The project area is in Section 5, Township 6 South, Range 89 West of the 6th Principal Meridian in Garfield County, Colorado (Figure 1). The UTM coordinates for the approximate center of the project area are 297716mE, 4381291mN, Zone 13 North. The longitude/latitude of the project area is 107.354523°W/39.557471°N. The elevation of the project area is approximately 5,800 feet above sea level.

The project area consists primarily of previously developed and disturbed land with existing paved lots, landscaping, temporary parking areas, equipment storage, and previously disturbed uplands (Figure 2). Wulfsohn Mountain Park trails and open space occurs to the east, south, and west; and an unnamed ephemeral drainage mapped in 2020 occurs south of Phase 8 of the project area (Figure 2).

Based on the 2024 desktop review, a minimal amount of vegetation occurs in the project area. This vegetation is likely dominated by a mix of native and nonnative upland species including cheatgrass (*Bromus tectorum*) and smooth brome (*Bromus inermis*). Ornamental tree and shrub landscaping may also occur in the project area and include plains cottonwood (*Populus deltoides*), Colorado blue spruce (*Picea pungens*), ponderosa pine (*Pinus ponderosa*), and common juniper (*Juniperus communis*) trees. The open space surrounding the project area is a Gambel oak (*Quercus gambelii*)-dominated ecosystem extending around the base of Wulfsohn Mountain.

### Waters of the U.S., Including Wetlands

During the 2024 desktop review, assessed the project area for potential WOTUS, including abutting and adjacent wetlands. ERO reviewed USGS quadrangle topographic maps, the NHD, the NWI, and aerial photography to identify mapped streams, areas of open water, and potential areas that could indicate wetlands or WOTUS.

The project area is within Hydrologic Unit 12-140100050102 (South Canyon Creek-Colorado River subwatershed). The USGS Glenwood Springs, CO topographic quadrangle map, along with the NHD and NWI, indicate unnamed intermittent streams flow just west of Phase 8 of the project area and approximately 0.2 mile east of Phase 6A. During the 2020 site visit, one ephemeral drainage was mapped just west of Phase 8 (Figure 2). Based on aerial imagery, a potential drainage area may contain water and associated wetlands along the eastern boundary of Phase 6A. If present, these features appear to be associated with a roadside drainage swale excavated in dryland that would not carry a relatively permanent flow and would be excluded by the U.S. Army Corps of Engineers (Corps) from being a WOTUS. However, the aquatic features (if present) may be subject to State Dredge and Fill Policies (CDPHE 2024).

## Recommendations

Based on the 2020 site visit and 2024 desktop review, no wetlands or WOTUS occur in Phase 6B or Phase 8 of the project area, and no further actions are required for those phases.

The eastern boundary of Phase 6A has the potential to support aquatic resources. If work is planned in this portion of Phase 6A, ERO recommends conducting a wetland delineation to confirm the presence/absence of aquatic resources, as well as the need for Clean Water Act (CWA) Section 404 permitting or compliance with State Dredge and Fill Policies (CDPHE 2024), as appropriate. Additionally, a CDOT Wetland Finding Report would be required if permanent wetland impacts exceed 500 square feet or combined temporary and permanent wetland impacts exceed 1,000 square feet.

## Noxious Weeds

Although a noxious weed survey was not conducted in 2024, the 2020 findings indicate that noxious weeds have the potential to occur in the project area. ERO recommend adding CDOT Specifications for Noxious Weed Management to the project construction documents.

## Federally Listed Threatened and Endangered Species

ERO assessed the project area for potential habitat for T&E species under the Endangered Species Act (ESA) of 1973, as amended (16 United States Code 1531 et seq.). Federal T&E species are protected under the ESA. Significant adverse effects on a federally listed species or its habitat require consultation with the Service under Section 7 or 10 of the ESA. Federally listed T&E species with habitat in the project area or with potential to be affected by projects in the project area are listed in Table 2.

**Table 2. Federally listed T&E species potentially found in the project area or potentially affected by projects in the project area.**

| Common Name          | Scientific Name                  | Status* | Habitat                                                                | Habitat Present or Potential to Be Affected by the Project? |
|----------------------|----------------------------------|---------|------------------------------------------------------------------------|-------------------------------------------------------------|
| <b>Mammals</b>       |                                  |         |                                                                        |                                                             |
| Canada lynx          | <i>Lynx canadensis</i>           | T       | Climax boreal forest with a dense understory of thickets and windfalls | No suitable habitat                                         |
| Gray wolf            | <i>Canis lupus</i>               | E       | Temperate forests, mountains, tundra, taiga, grasslands, and deserts   | No suitable habitat                                         |
| <b>Birds</b>         |                                  |         |                                                                        |                                                             |
| Mexican Spotted Owl  | <i>Strix occidentalis lucida</i> | T       | Closed canopy forests in steep canyons                                 | No suitable habitat                                         |
| Yellow-billed Cuckoo | <i>Coccyzus americanus</i>       | T       | Wooded habitat with dense cover and nearby water                       | No suitable habitat and outside of known breeding areas     |

| Common Name                | Scientific Name                 | Status* | Habitat                                                                                                                     | Habitat Present or Potential to Be Affected by the Project? |
|----------------------------|---------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|

\*T = Federally Threatened Species; E = Federally Endangered Species; C = Federal Candidate Species.  
Source: Service 2024.

There is no likelihood for the proposed project to affect the Canada lynx, gray wolf, Mexican Spotted Owl, Yellow-Billed Cuckoo, bonytail chub, Colorado pikeminnow, humpback chub, razorback sucker, monarch butterfly, silverspot butterfly, or Ute-ladies' tresses orchid because of the lack of habitat in the project area. Because no suitable habitat for these species occurs in the project area, no additional action is necessary regarding these species.

## State-Listed Threatened and Endangered Species and Species of Concern

Numerous species that potentially occur in the project area in Garfield County are considered T&E or species of concern by the State of Colorado (Table 3). According to Colorado law (Colo. Rev. Stat. Ann. §§ 33-2-102-106), the state must maintain a list of species determined T&E in the state. State-listed wildlife species that are not already protected under the ESA are protected under State Statute 33, which is regulated by CPW. No regulations currently exist for state species of concern. However, if any species were to be listed during construction, state regulations could be enforced.

The habitat affinities, presence of habitat in the project area, and impacts on these species or habitats are provided in the following discussion.

**Table 3. CPW T&E species and species of concern potentially occurring in the project area in Garfield County.**

| Common Name                    | Scientific Name (Status*)                        | General Colorado Range                                                 | Habitat Present                                                                                                                                                    |

| Northern leopard frog | <i>Lithobates pipiens</i> (SC) | Wetlands, slow-moving streams, and ponds | No known suitable habitat; unlikely to occur |

\*SE = Colorado Endangered Species; ST = Colorado Threatened Species; SC = Colorado Species of Special Concern.

Sources: CPW 2023b; Colorado Natural Heritage Program 2024.

Of the species listed in Table 3, only the Bald Eagle (*Haliaeetus leucocephalus*) and northern leopard frog (*Lithobates pipiens*) have the potential to occur in the project area and are discussed in more detail below.

The Canada lynx, kit fox, North American wolverine, Townsend's big-eared bat, American Peregrine Falcon, Columbia Sharp-Tailed Grouse, Ferruginous Hawk, Greater Sandhill Crane, Sage Grouse, Western Yellow-Billed Cuckoo, Colorado River cutthroat trout, razorback sucker, roundtail chub, longnose leopard lizard, midget faded rattlesnake, and boreal toad would not be affected by the proposed project because the project area is outside of the known range, suitable habitat is not present, or potential habitat would not be impacted by project activities and, therefore, these species are not discussed in the following sections.

### Bald Eagle

The Bald Eagle is a large North American bird with a historical distribution throughout most of the U.S. Most Bald Eagle nesting in Colorado occurs near lakes or reservoirs or along rivers. Typical Bald Eagle nesting habitat consists of forests or wooded areas that contain tall, aged, dying, and dead trees (Martell 1992). Bald Eagles seek aquatic habitat for foraging and typically prefer fish, although they also feed on birds, mammals, and carrion, particularly in winter (Buehler 2000; Sharps and Uresk 1990). Prairie dogs provide a major food resource for Bald Eagles wintering along the Colorado Front Range (Environmental Science and Engineering 1988).

No known Bald Eagle nests occur in the project area or within a 0.5-mile radius of the project area (the CPW-recommended buffer) and no Bald Eagles were observed during the 2020 site visit; however, the project area occurs in an area mapped as Bald Eagle winter range and Bald Eagle winter forage area (CPW 2023b). Winter range typically refers to those areas where Bald Eagles have been observed between November 15 and April 1 (CPW 2023b).

The project area consists primarily of existing disturbed areas. Other infrastructure and buildings within 0.5 mile of the project area include I-70, local roads, a railroad corridor, and various other commercial buildings and parking structures. Additional sources of anthropogenic (human-caused) disturbance in proximity of the project area include pedestrians, mountain bike cyclists, and other users of the open space area trails surrounding the project area. Because of the ambient level of human disturbance in the project area and surrounding area, ERO biologists concluded that the project activities would not likely disturb Bald Eagles potentially using the winter range or winter forage areas.

### **Northern Leopard Frog**

The northern leopard frog (*Lithobates pipiens*) is a species of special concern in Colorado (CPW 2023a). Worldwide and locally in Colorado, amphibian populations have declined for reasons not well known. In Colorado, this frog can be found nearly statewide in mountains and lowlands but is scarce or absent in most of southeastern Colorado and the Republican River drainage in northeastern Colorado (CPW 2016). It is considered locally common but now rare or extirpated in many areas, particularly in the mountains.

The northern leopard frog prefers the banks and shallow portions of marshes, wet meadows, ponds, lakes, and streams, particularly where rooted aquatic vegetation is present (Hammerson 1999). The frogs prefer permanent water bodies and are a wide-ranging species known to elevations of 11,000 feet. In summer, they commonly inhabit wet meadows and fields. They take cover underwater, in damp niches, or in caves when inactive. Wintering sites are usually underwater, though some frogs possibly overwinter underground (Karns 1992).

If present, wetlands in or adjacent to the project area are potentially suitable habitat for northern leopard frogs. No northern leopard frogs were observed during the 2020 site visit; however, it is possible that the species occupies habitat in or adjacent to the project area. If the northern leopard frog is present in the project area, the project may adversely impact individuals. However, the project area is not likely to support habitat for this species nor are project activities likely to cause a trend toward federal listing or a loss of species viability throughout its range because the project area does not fit the description of preferred habitat because of a lack of permanent water bodies preferred by this frog.

### **Other Wildlife**

The project area is shown as occurring in the CPW-mapped High Priority Habitat for Elk Severe Winter Range (CPW 2021). For any work conducted in areas mapped in the Elk Severe Winter Range, ERO recommends contacting the local CPW district manager requesting concurrence that the proposed project would not likely affect elk. However, because the project would primarily occur in previously disturbed areas and because of the ambient level of human disturbance in the project area and surrounding area, ERO biologists concluded that the project activities would likely only temporarily disturb elk potentially using the severe winter range.

A variety of other wildlife may occur in or adjacent to the project area, and the project area is shown as occurring in black bear (*Ursa americanus*) overall range, black bear fall concentration area, elk (*Cervus canadensis*) overall range, elk winter range, elk severe winter range, moose (*Alces alces*) overall range, moose summer range, moose winter range, mountain lion (*Puma concolor*) overall range, mule deer (*Odocoileus hemionus*) overall range, mule deer winter range, and mule deer summer range (Natural Diversity Information Source 2021). The project area abuts open space to the south, west, and east; however, the surrounding areas to the north have been significantly disturbed by human development, including construction of commercial and residential properties and roads. Additionally, the project area provides little suitable habitat for wildlife as it consists predominantly of paved and disturbed areas.

During the 2020 site visit, mule deer scat was observed south of the project area. It is likely that mountain lion, black bear, elk, and mule deer may forage or migrate adjacent to the project area; however, no designated wildlife corridors are mapped in the vicinity of the project area (CPW and CDOT 2024).

## **Migratory Birds and Raptors**

Migratory birds, as well as their eggs and nests, are protected under the Migratory Bird Treaty Act (MBTA). In Colorado, all birds except for the European starling (*Sturnus vulgaris*), house sparrow (*Passer domesticus*), and rock dove (pigeon; *Columba livia*) are protected under the MBTA. The MBTA does not contain any prohibition that applies to the destruction of a bird nest alone (without birds or eggs), provided that no possession occurs during the destruction. While destruction of a nest by itself is not prohibited under the MBTA, nest destruction that results in the unpermitted take of migratory birds or their eggs is illegal and fully prosecutable under the MBTA (Service 2003b). The regulatory definition of a take means to pursue, hunt, shoot, wound, kill, trap, capture, or collect; or attempt to pursue, hunt, shoot, wound, kill, trap, capture, or collect (50 Code of Federal Regulations 10.12).

Under the MBTA, the Service may issue nest depredation permits, which allow a permittee to remove an active nest. The Service, however, issues few permits and only under specific circumstances, usually related to human health and safety. Obtaining a nest depredation permit is unlikely and involves a process that takes, at a minimum, 8 to 12 weeks. The best way to avoid a violation of the MBTA is to remove vegetation outside of the active breeding season, which typically falls between March and August, depending on the species. MBTA enforcement actions are typically the result of a concerned member of the community reporting a violation.

## **Potential Habitat and Effects**

ERO reviewed the CPW nest database for any known nests in the project area (CPW 2023c). No known raptor nests occur in the project area or within a 0.5-mile radius of the project area. During the 2020 site visit, ERO observed one potentially active rock dove (pigeon) nest inside an outbuilding near the southeastern portion of the project area; however, this species is not protected under the MBTA. During the 2020 site visit, ERO also observed an American crow (*Corvus brachyrhynchos*) foraging south of the project area. The breeding season for most birds in Colorado is March through August, with the exception of a few species that begin breeding in February, such as great-horned owls. CPW recommends a 0.33- or 0.25-mile buffer from active raptor nests, depending on the species (CPW 2020).

## **Recommendations**

To avoid destruction of potential migratory bird nests, vegetation removal should be conducted outside of the breeding season. CDOT has identified the primary nesting season for migratory birds in Colorado as occurring from April 1 through August 31 (CDOT 2011). Because of variability in the breeding seasons, ERO recommends that a nest survey be conducted within one week prior to construction to determine if any active nests are present in the project area so that they can be avoided. Additional nest surveys during the nesting season may also be warranted to identify active nesting species that may present

additional development timing restrictions (e.g., Bald Eagles or Red-Tailed Hawks). If active nests are identified in or near the project area, activities that would directly affect the nests should be restricted. Habitat-disturbing activities (e.g., tree removal, grading, scraping, and grubbing) should be conducted during the nonbreeding season to avoid disturbing active nests, or to avoid a “take” of the migratory bird nests in the project area. Nests can be removed during the September 1 through March 31 nonbreeding season to preclude future nesting and avoid violations of the MBTA. There is no process for removing nests during the nonbreeding season; however, nests may not be collected under MBTA regulations. If the construction schedule does not allow vegetation removal outside of the breeding season, a nest survey should be conducted immediately prior to vegetation removal to determine if the nests are active and by which species. If active nests are found, any work that would destroy the nests or cause the birds to abandon young in the nest could not be conducted until the birds have vacated the nests.

The CPW has recommended buffer zones of 0.33 mile for active Red-Tailed Hawk nests and 0.25 mile for active Swainson’s Hawk nests (CPW 2020). Activities that would directly impact an active nest, or that would encroach close enough to cause adult birds to abandon the nest during the breeding season, should be restricted. Construction activities that could potentially be within a Red-Tailed Hawk or other raptor buffer zone should commence outside of the February 15 through August 31 breeding season. Consultation with CPW or the Service may be required if construction is proposed within the CPW-recommended buffer zone of an active raptor nest.

## **Colorado SGPI**

CDOT developed a programmatic agreement with the Service, the Federal Highway Administration, CPW, The Nature Conservancy, and the Colorado Natural Heritage Program to address potential effects of CDOT routine maintenance and upgrade activities on a number of T&E, proposed, candidate, and sensitive species found in the shortgrass prairie ecoregion of eastern Colorado (Service 2003a). The SGPI agreement generally covers areas in Colorado east of I-25, with some smaller areas west of I-25 (covered area).

ERO reviewed the covered area under the agreement, and the project area does not occur in the covered area. As such, no further action under the SGPI is necessary.

## **SB40 Regulated Areas**

ERO assessed the project area for areas regulated under SB40 Wildlife Certification. SB40 requires state agencies to evaluate their actions for potential effects on streams important for fish and wildlife resources. CDOT and CPW have developed a consultation process for CDOT projects that includes criteria for which streams fall under SB40 jurisdiction and mitigation required for impacts on jurisdictional streams and associated riparian vegetation. SB40 jurisdictional streams are generally perennial, ephemeral, or intermittent streams that provide flowing water beneficial to fish and wildlife. Drainage ditches do not fall under SB40 jurisdiction.

ERO assessed the project area for areas regulated under SB40 Wildlife Certification. SB40 requires state agencies to evaluate their actions for potential effects on streams important for fish and wildlife resources. No streams falling under SB40 regulation occur in the project area; therefore, the project does not require SB40 Wildlife Certification.

## Conclusions

The project area contains a limited number of regulated or sensitive biological resources that would need to be addressed during project design and construction. The impacts for each biological resource and recommended actions, including any mitigation commitments, are described in Table 4.

**Table 4. Impacts, recommended actions, and mitigation commitments for each biological resource in the project area.**

| Biological Resource                                   | Impact                                                                                                                                                                                                                                                                                                                                                        | Recommended Actions/<br>Mitigation Commitments                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Waters of the U.S., including wetlands                | Phase 6B and Phase 8 would not result in any impacts on wetlands or other WOTUS.<br><br>The eastern boundary of Phase 6A has the potential to support wetlands or other WOTUS; however, these aquatic resources (if present) are unlikely to be found jurisdictional by the Corps.                                                                            | If work is planned along the eastern boundary of Phase 6A, ERO recommends conducting a wetland delineation and determining the need for CWA Section 404 permitting or compliance with State Dredge and Fill Policies (CDPHE 2024). Additionally, a CDOT Wetland Finding Report will be required if permanent wetland impacts exceed 500 square feet or combined temporary and permanent wetland impacts exceed 1,000 square feet. If no work is planned to occur in these areas, no further action is necessary. |
| Noxious weeds                                         | Noxious weed species could potentially be present in the project area.                                                                                                                                                                                                                                                                                        | CDOT specifications for Noxious Weed Management outlining best management practices to reduce the introduction and spread of noxious weeds should be added to the project construction documents.                                                                                                                                                                                                                                                                                                                |
| Federally listed T&E species                          | No habitat for federally listed T&E species occurs in the project area.                                                                                                                                                                                                                                                                                       | No further action regarding federally listed T&E species is required due to the lack of suitable habitat in the project area. .                                                                                                                                                                                                                                                                                                                                                                                  |
| State-listed T&E species and state species of concern | The project area contains potential habitat for Bald Eagles.                                                                                                                                                                                                                                                                                                  | No known Bald Eagle nests are within the CPW-recommended buffer of 0.5 mile; therefore, no further action is necessary regarding state-listed T&E species.                                                                                                                                                                                                                                                                                                                                                       |
| Wildlife                                              | The project area is located in CPW-mapped High Priority Habitat for Elk Severe Winter Range. Due to the ambient level of human disturbance in the project area, it is unlikely the proposed project would permanently impede wildlife movement in the project area. However, it is likely wildlife would be temporarily disturbed by construction activities. | ERO recommends contacting the local CPW district manager requesting concurrence that the proposed project would not likely affect wintering elk.                                                                                                                                                                                                                                                                                                                                                                 |
| Migratory birds and raptors                           | No known raptor migratory bird nests occur in the project area or within a 0.5-mile radius of the project area.                                                                                                                                                                                                                                               | Vegetation should be removed outside of the breeding season and, minimally, a nest survey should be conducted within one week prior to construction activities. Section 240 Specification should be added to the project construction documents.                                                                                                                                                                                                                                                                 |
| Colorado SGPI                                         | The project area does not occur in the SGPI covered area.                                                                                                                                                                                                                                                                                                     | No further action is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Biological Resource  | Impact                                                 | Recommended Actions/<br>Mitigation Commitments |
|----------------------|--------------------------------------------------------|------------------------------------------------|
| SB40 regulated areas | No SB40 regulated resources occur in the project area. | SB40 Wildlife Certification is not required.   |

## **Appendix J: Paleontological Resources**

# WESTERN SLOPE PALEONTOLOGICAL SERVICES

Friday, May 3rd, 2024

RE: Paleontological Resources Impact Evaluation for the RFTA Regional Transit Center and Expansion Project

To whom it may concern,

Western Slope Paleontological Services (WSP) performed an analysis of existing paleontological data for the Roaring Fork Transportation Authority "Regional Transit Center and Expansion Project" in Garfield County, Colorado (project area). The analysis included a museum records search consisting of fossil locality data requests made at the University of Colorado Museum of Natural History (UCM) and the Denver Museum of Nature and Science (DMNS), and an online fossil locality records search through the Colorado Office of Archaeology and Historic Preservation Compass online database (Compass). In addition, an online search of geologic maps, scientific literature, and other sources of paleontological data within and near to the project area was undertaken as part of the analysis. Lastly, the Potential Fossil Yield Classification (PFYC) of the project area as designated by the Bureau of Land Management (BLM) was determined.

The 1:24,000-scale "Geologic Map of the Glenwood Springs Quadrangle, Garfield County, Colorado" (Kirkham et al. 2009) shows that the entire project area is situated in Holocene-age "younger debris-flow deposits" (Qdfy). Holocene deposits can contain the unfossilized remains of modern species of animals and plants, however, these deposits are typically too young to contain in situ fossils and are not generally considered to be paleontologically sensitive (Murphey and Daitch 2007). The BLM designates the Holocene deposits in the project area as PFYC 2, indicating geologic units that are "generally younger than 10,000 years old" and "are not likely to contain paleontological resources" (BLM 2016). Management concerns in PFYC 2 units "are generally low and further assessment is usually unnecessary," with standard stipulations usually recommended prior to land development "to accommodate unanticipated discoveries" (BLM 2016).

The UCM, DMNS, and Compass fossil locality searches all returned negative results, as no known fossil localities are known within the project area or within a 1-mile buffer. Also, no literature was found concerning fossil localities within the project area or 1-mile buffer. Hence, the project area is considered to be free of known fossil localities, and no further action concerning paleontological resources is necessary for this project.

Search results are available by request from WSP. Please contact me with this or any other requests/questions at [westslopepaleo@gmail.com](mailto:westslopepaleo@gmail.com).

Sincerely,

A handwritten signature in black ink, appearing to read "Josh Smith", written over a horizontal line.

Josh A. Smith  
Principal/Paleontologist

**Project Description**

Project Name: **Glenwood Maintenance Facility (GMF), Phase 6A, 6B, and 8**  
 Milepost Begin: **NA** Milepost End: **NA** County: **Garfield**  
 Location: **The project area consists of Wulfsohn Road east of the intersection with Midland Avenue, the West Glenwood Park & Ride, and a portion of the parking lot for the RFTA GMF in Glenwood Springs, Colorado. The project area is in the SW quarter of Section 5, Township 6 South, Range 89 West of the 6th Principal Meridian in Garfield County, Colorado.**  
 Main Project Elements: **Phase 6A consists of the construction of the Transit Center, which will be a 6,093 square foot building designed to accommodate needs for passengers and RFTA staff; Phase 6B consists of the construction of a 22,956 square foot building designed to cater to the existing and future needs of the RFTA. This phase also involves development of the parking area, landscaping, and a pedestrian bridge to provide access to Wulfsohn Road; and Phase 8 consists of modifications and construction for a storage building to support RFTA's daily activities.**

**July 29, 2024**

## **1.0 Introduction**

The Roaring Fork Transportation Authority (RFTA) retained ERO Resources Corporation (ERO) to conduct an Initial Site Assessment (ISA) for the Glenwood Maintenance Facility (GMF), Phases 6A, 6B, and 8 in Glenwood Springs, Colorado (project area). The project area consists of Wulfsohn Road east of the intersection with Midland Avenue, the West Glenwood Park & Ride, and a portion of the parking lot for the RFTA GMF in Glenwood Springs, Colorado (Figure 1). This report presents the findings, opinions, and conclusions of this ISA.

This ISA was performed to satisfy the Work Scope and contract between RFTA and ERO dated April 23, 2023. The conclusions in this report are based on limited observations and investigations described herein at the time this ISA was conducted; future events may alter these findings.

The purpose of the project is to update and build facilities to support future RFTA operations, enhance passenger experience, and increase overall area accessibility.

### **1.1 Location**

The project area is in the SW quarter of Section 5, Township 6 South, Range 89 West of the 6th Principal Meridian in Garfield County, Colorado (Figure 1). According to the Garfield County Assessor's Office, the project area consists of Wulfsohn Road, its public rights-of-way (ROW), and portions of three Garfield County parcels all owned by RFTA (Garfield County Assessor's Office 2024).

### **1.2 Site and Vicinity General Characteristics**

The project area consists of Wulfsohn Road southeast of the intersection with Midland Avenue, the West Glenwood Park & Ride, and portions of the parking lot for the RFTA GMF in Glenwood Springs, Colorado. The project area is generally bounded by undeveloped land and former municipal land undergoing construction for the new Glenwood Maintenance and Operations Center (MOC) (Figure 2).

## 2.0 Project Description

According to project plans from the RFTA, the general project scope consists of the following three phases (RFTA 2024):

- Phase 6A consists of the construction of the Transit Center, which will be a 6,093 square foot building designed to accommodate needs for passengers and RFTA staff;
- Phase 6B consists of the construction of a 22,956 square foot building designed to cater to the existing and future needs of the RFTA. This phase also involves development of the parking area, landscaping, and a pedestrian bridge to provide access to the newly constructed RFTA Operations Center and Bus Storage Facility, which is located across the access road; and
- Phase 8 consists of modifications and construction for a storage building to support RFTA's daily activities.

Based on current available information regarding the proposed project, the maximum depth of excavation in the project area is unknown. Based on groundwater levels identified in environmental reports for sites adjoining the project area, groundwater is not anticipated to be encountered during construction. Permanent or temporary easements and/or right-of-way acquisition will not be necessary.

## 3.0 Physical Setting

The elevation of the project area ranges from 5,790 to 5,850 feet above sea level (U.S. Geological Survey [USGS] 2024). Surface geology in the area is characterized by alluvial deposits of sand and gravel underlain by gypsum, anhydrite, and interbedded siltstone and minor dolomites of the Eagle Valley Evaporite (Tweto, Moench, and Reed Jr., 1978). According to a 2023 Site Characterization Report (SCR) prepared by TAIT Environmental Services, Inc. (TAIT), for the former RFTA MOC located adjoining to the south of the project area, groundwater in the vicinity of the project area was not encountered in soil borings up to 25 feet bgs (TAIT 2023). According to topographic information from the USGS 7.5-minute quadrangle map, surface water in the project area flows to the north-northwest, toward the Colorado River (USGS 2024). Based on the topography and field observations, the expected flow direction of the uppermost groundwater is to the north-northwest, toward the Colorado River.

## 4.0 Historical Review

### 4.1 Historical Use Information for the Project Area and Adjoining Properties

ERO used the following standard historical sources to evaluate current and past uses of the project area and adjoining properties:

- Historical aerial photographs from 1955 to 2023
- Historical topographic maps from 1961 to 2022

Other standard historical sources for the site, such as street directories, project area tax files, recorded land title records, building department records, and zoning/land use records, were not reasonably ascertainable, were not available, or, based on ERO's professional experience, are unlikely to be sufficiently useful, accurate, or complete and are unlikely to provide significant additional historical information with regard to the project area.

#### **4.1.1 Historical Aerial Photographs**

Historical aerial photographs from 1955 to 2023 showing the project area and surrounding area were reviewed and are discussed below (Environmental Data Resources [EDR] 2024a; Google Earth 2024).

##### **1955 and 1960 Aerial Photographs; Scale: 1 inch=500 feet**

The 1955 and 1960 aerial photographs show the project area and surrounding area to be undeveloped. A portion of the land northwest of the project area is developed for agricultural purposes. The Colorado River is visible north of the project area. U.S. Highway 6 (Highway 6) is visible north of the Colorado River. Several buildings are visible north of Highway 6.

##### **1979 Aerial Photograph; Scale: 1 inch=500 feet**

No significant changes to the project area are visible in the 1979 aerial photograph compared with the previous photograph. Significant changes to the surrounding area consist of the following:

- The Denver and Rio Grande Great Western Railroad (D&R GW RR) is visible north of the project area;
- Road construction is visible north of the Colorado River for U.S. Interstate 70 (I-70); and
- Development north of the Colorado River continues.

##### **1983 Aerial Photograph; Scale: 1 inch=500 feet**

No significant changes to the project area are visible in the 1983 aerial photograph compared with the previous photograph. Significant changes to the surrounding area consist of the following:

- Two new buildings and several roads are visible north of the project area, between the D&R GW RR and the Colorado River;
- I-70 is complete; and
- Development north of the Colorado River continues.

##### **1989 and 1993 Aerial Photographs; Scale: 1 inch=500 feet**

No significant changes to the project area or surrounding area are visible in the 1989 and 1993 aerial photographs compared with the previous photograph.

##### **1999 Aerial Photograph; Scale: 1 inch=500 feet**

No significant changes to the project area are visible in the 1999 aerial photograph compared with the previous photographs. Significant changes to the surrounding area consist of the following:

- Midland Avenue is visible north of the project area; and
- Development is visible between the D&R GW RR and the Colorado River.

**2006 Aerial Photograph; Scale: 1 inch=500 feet**

Significant changes to the project area and surrounding area in the 2006 aerial photograph compared with the previous photograph consist of the following:

- The Glenwood Springs MOC, administration buildings, and associated parking lots are visible on and adjoining the project area;
- The RFTA park and ride lot is visible on and adjoining the project area;
- Wulfsohn Road is visible crossing the project area;
- Grading is visible adjoining the project area to the east;
- A dirt road and an excavated sediment trench are visible southeast of the project area; and
- Several commercial office buildings are visible north and east-southeast of the project area.

**2011 Aerial Photograph; Scale: 1 inch=500 feet**

Significant changes to the project area and surrounding area in the 2011 aerial photograph compared with the previous photograph consist of the following:

- Soil disturbance is visible in the central and northern portions, as well as adjoining the northern portion of the project area.

**2015 Aerial Photograph; Scale: 1 inch=500 feet**

No significant changes to the project area or surrounding area are visible in the 2015 aerial photograph compared with the previous photograph.

**2019 Aerial Photograph; Scale: 1 inch=500 feet**

Significant changes to the project area and surrounding area in the 2019 aerial photograph compared with the previous photograph consist of the following:

- A parking lot and bus loop are visible in the central portion of the project area;
- Soil disturbance is visible in the northeast portion of the project area; and
- A concrete walking path is visible north of the project area.

**2023 Aerial Photograph; Google Earth; Scale Variable**

Significant changes to the project area and surrounding area in the 2023 aerial photograph compared with the previous photograph consist of the following:

- Soil disturbance and grading associated with the decommissioning of the former Vehicle Maintenance and Operations Center is visible on and adjoining the project area; and
- A dirt/gravel parking lot is visible in the northeast portion of the project area.

**4.1.2 Historical Topographic Maps**

Historical USGS topographic maps from 1961 to 2022 showing the project area and surrounding area were reviewed and are discussed below (USGS 2024).

**1961 USGS 7.5-Minute Series, Glenwood Springs Quadrangle, CO; Scale: 1:24,000**

The USGS topographic map from 1961 shows the project area and surrounding area to be undeveloped. An unnamed road is shown north of the project area. Multiple drainages are shown east and west of the project area, draining toward the Colorado River north of the project area.

**1979 and 1982 USGS 7.5-Minute Series, Glenwood Springs Quadrangle, CO; Scale: 1:24,000**

No significant changes to the project area are shown on the USGS topographic maps from 1979 and 1982 compared with the previous map. Significant changes to the surrounding area consist of the following:

- The D&R GW RR is visible north of the project area;
- An area of fill is shown east of the project area; and
- I-70 is shown north of the Colorado River.

**1987 USGS 7.5-Minute Series, Glenwood Springs Quadrangle, CO; Scale: 1:24,000**

No significant changes to the project area are shown on the USGS topographic map from 1987 compared with the previous map. Significant changes to the surrounding area consist of the following:

- Several new buildings, a road, and a bridge are shown north of the Colorado River.

**2011, 2013, 2016, 2019, and 2022 USGS 7.5-Minute Series, Glenwood Springs Quadrangle, CO; Scale: 1:24,000**

The 2011, 2013, 2016, 2019, and 2022 USGS topographic maps, with corresponding aerial photograph base maps, show the subject property and surrounding area as they appeared in the aerial photographs for the same period discussed above.

## 5.0 Records Review

### 5.1 Standard Environmental Records Sources

ERO contracted with a commercial database search company, EDR, to conduct a search of publicly available database records (EDR 2024b). All ASTM International (ASTM) search distance sites are measured from the project area boundary.

ERO reviewed initial search results for inaccuracies using both field and mapping data sources. In addition, ERO attempted to locate orphan sites, those that lack adequate location information to map, using zip code, city name, site name, or other information. No orphan sites were found to be within the approximate ASTM search distances. Sites identified in the surrounding area are discussed in the following sections and assessed as to their potential to be historical, known, or suspect environmental concerns associated with the project area. A summary is included in Table 1, and copies of records reviewed are in Appendix A.

**Table 1. Summary of publicly available environmental records.**

| Record Sources                 | Search Distance (miles) <sup>1</sup> | Project Area | No. of Sites in Surrounding Area |
|--------------------------------|--------------------------------------|--------------|----------------------------------|
| Federal NPL site list          | 1.0                                  | No           | 0                                |
| Federal Delisted NPL site list | 0.5                                  | No           | 0                                |

| Record Sources                                                                                                           | Search Distance (miles) <sup>1</sup> | Project Area | No. of Sites in Surrounding Area |
|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------|--------------|----------------------------------|
| Federal Superfund Enterprise Management System (SEMS) list                                                               | 0.5                                  | No           | 0                                |
| Federal SEMS-Archive site list                                                                                           | 0.5                                  | No           | 0                                |
| Federal Resource Conservation and Recovery Act (RCRA) Corrective Action (RCRA) Corrective Action site list               | 1.0                                  | No           | 1                                |
| Federal RCRA Treatment, Storage, and Disposal (TSD) facilities list                                                      | 0.5                                  | No           | 0                                |
| Federal RCRA generators list                                                                                             | Project area and adjoining           | Yes          | 1                                |
| Federal institutional control/engineering control registries                                                             | Project area only                    | No           | 0                                |
| Federal Emergency Response Notification System list                                                                      | Project area only                    | No           | 0                                |
| State NPL-equivalent sites <sup>2</sup>                                                                                  | 1.0                                  | No           | 0                                |
| State Comprehensive Environmental Response, Compensation, and Liability Information System-equivalent sites <sup>2</sup> | 0.5                                  | No           | 0                                |
| State landfill and/or solid waste disposal site list                                                                     | 0.5                                  | No           | 2                                |
| State leaking storage tank list                                                                                          | 0.5                                  | Yes          | 8                                |
| State registered storage tank list                                                                                       | Project area and adjoining           | Yes          | 2                                |

| State Historical Cleaners                                                                                                | Project area and adjoining           | No           | 0                                |

<sup>1</sup>ASTM E1527 standard search distances.

<sup>2</sup>In Colorado, the lead agency for National Priorities List (NPL)/CERCLA may be either the Environmental Protection Agency or the Colorado Department of Public Health and Environment (CDPHE).

### 5.1.1 Federal Resource Conservation and Recovery Act Corrective Action Site List

The federal Resource Conservation and Recovery Act (RCRA) Corrective Action Site (CORRACTS) List provides a list of sites that have had or are undergoing corrective action or cleanup pursuant to the RCRA. One corrective action site is within 1 mile of the project area (Table 2) and is discussed further in section 5.2.1.

**Table 2. Summary of corrective action sites within one mile of the project area.**

| Site Name            | Address            | Status                              | Distance and Direction           |
|----------------------|--------------------|-------------------------------------|----------------------------------|
| EIMCO Coal Machinery | 2222 Devereux Road | Received regulatory closure in 2000 | 0.19 mile NW of the project area |

### 5.1.2 Federal Resource Conservation and Recovery Information System

The Resource Conservation and Recovery Information System (RCRIS) includes two lists: (1) facilities on which treatment, storage, and/or disposal (TSD) of hazardous wastes occur; and (2) persons or entities that generate hazardous waste as defined and regulated by the RCRA. According to these lists, no TSD facilities are located within 0.5 mile of the project area, and the RFTA GMF site is located on and adjoining the project area. The RFTA GMF site is listed as a very-small quantity generator (VSQG) of nonhalogenated solvents and has no records of violations.

### 5.1.3 State Landfill and Solid Waste Disposal Sites

The CDPHE lists no permitted landfills and two other solid waste disposal sites within 0.5 mile of the project area (Table 3).

**Table 3. Solid waste disposal sites within 0.5 mile of the project area.**

| Site Name                             | Address         | Status               | Distance and Direction          |
|---------------------------------------|-----------------|----------------------|---------------------------------|
| Discount Tire                         | 51537 Highway 6 | Waste tire generator | 0.20 mile N of the project area |
| MCD Automotive Interests Colorado LLC | 51429 Highway 6 | Waste tire generator | 0.23 mile N of the project area |

#### **5.1.4 State Leaking Storage Tank Sites**

The Colorado Department of Labor and Employment, Division of Oil and Public Safety (CDLE/OPS) lists no leaking underground storage tank (LUST) or leaking aboveground storage tank (LAST) site in the project area. Eight LUST or LAST sites are located within 0.5 mile of the project area (Table 4). The RFTA GMF site and Glenwood MOC site are discussed further in section 5.2.3.

**Table 4. LUST or LAST sites within 0.5 mile of the project area.**

| Site Name                                                                      | Address            | Status                                 | Distance and Direction                                         |
|--------------------------------------------------------------------------------|--------------------|----------------------------------------|----------------------------------------------------------------|
| Roaring Fork Transportation Authority Glenwood Maintenance Facility (RFTA GMF) | 2307 Wulfsohn Road | Four event IDs, all closed             | Adjoining the project area                                     |
| Glenwood Springs Municipal Operations Center (MOC)                             | 2301 Wulfsohn Road | Closed                                 | Adjoining the project area to the south                        |
| EZ Way Rentals, Inc.                                                           | 51527 US Highway 6 | Two event IDs, both closed             | 0.21 mile N of the project area and across the Colorado River  |
| Rey Motors, Inc                                                                | 51457 Highway 6    | Closed                                 | 0.24 mile N of the project area and across the Colorado River  |
| 7-11 #17211                                                                    | 51315 Highway 6    | Closed                                 | 0.27 mile N of the project area and across the Colorado River  |
| Alta Convenience #6318                                                         | 51171 Highway 6    | Closed                                 | 0.39 mile NW of the project area and across the Colorado River |
| Alta Convenience #6020                                                         | 23 Mel Rey Road    | Four event IDs, undergoing remediation | 0.42 mile NW of the project area and across the Colorado River |

## 5.2 Additional Environmental Records Sources

### 5.2.1 Colorado Department of Public Health and Environment

ERO reviewed the CDPHE Hazardous Materials and Waste Management Division online mapping application for any known sites that may indicate environmental concerns in or near the project area. The RFTA GMF was identified as a CDLE/OPS LUST site, as well as a VSQG on and adjoining the project area. This site is discussed in Section 5.1.4, Section 5.1.5 and Section 5.2.3. In addition, the EIMCO Coal Machinery corrective action site was identified in the surrounding area. This site is discussed in Section 5.1.1 and below (CDPHE 2024).

**EIMCO Coal Machinery, 2222 Devereux Road.** The EIMCO Coal Machinery site, at 2222 Devereux Road, is about 0.19-mile northwest of the project area. The site is a former chromium plating facility for mining tools that identified a hexavalent chromium release during a site assessment in 1992 (Foremost Solutions, Inc. [FMI] 2000). An onsite pit containing the electroplating tanks had leaked, resulting in elevated hexavalent chromium levels in the surrounding soil and groundwater. The pit and surrounding soils were excavated and removed (FMI 2000). Depth to water measurements in five monitoring wells from June of 1999 through April of 2000 for the site showed groundwater at depths from 18-32 feet bgs with a groundwater flow direction to the north-northwest, toward the Colorado River and away from the project area (FMI 2000). Following the installation of a recirculating anaerobic bioremediation system and a chemical reducing agent, groundwater concentrations were observed to be below state standards (FMI 2000). FMI submitted a No Further Action Request for this site in April of 2000 (FMI 2000), and CDPHE granted the site regulatory closure on May 1, 2000 (CDPHE 2000).

### 5.2.2 Colorado Energy and Carbon Management Commission Records

ERO reviewed records maintained by the Colorado Energy and Carbon Management Commission (CECMC), the agency that regulates oil and natural gas exploration and production in Colorado. According to the CECMC, no oil and gas wells are on or near the project area (CECMC 2024).

### **5.2.3 Colorado Department of Labor and Employment, Division of Oil and Public Safety (CDLE/OPS)**

ERO reviewed records maintained by CDLE/OPS for the RFTA GMF site located at 2307 Wulfsohn Road, as well as the former Glenwood Springs MOC site at 2301 Wulfsohn Road.

**RFTA GMF, 2307 Wulfsohn Road.** The RFTA GMF has four closed releases associated with the site. Per a 2006 Storage Tank Report and Release Tracking Form, an overspill of about three gallons occurred at the diesel tank (RFTA 2006), and during a follow-on inspection, it was found that overfill protection systems on three of the USTs were compromised (CDLE/OPS 2006). According to the 2007 Site Characterization Report (SCR) prepared by Waste Engineering, Inc (WEI), as part of the site characterization report, soil sampling was requested (WEI 2007a). Soil samples collected from beneath the tanks contained very low levels of petroleum hydrocarbons; groundwater was not encountered, and therefore, was not sampled (WEI 2007a). CDLE/OPS granted the site regulatory closure on May 10, 2007 (CDLE/OPS 2007a).

ERO also reviewed a second 2007 SCR for a release in October of 2007, also prepared by WEI. During the replacement of overfill protection equipment on the 3,000-gallon motor oil tank, an OPS inspector suspected a release and requested sampling and analysis of soils associated with the UST (WEI 2007b). The single soil sample analyzed contained petroleum hydrocarbons at levels below CDLE/OPS Tier-I Risk-Based Screening Levels (RBSLs), groundwater was not encountered; and therefore, was not sampled (WEI 2007b). CDLE/OPS granted the site regulatory closure on November 14, 2007 (CDLE/OPS 2007b).

Additionally, ERO reviewed a 2019 Minor Equipment Repair/Replacement Notification prepared by Palisades Technology and Management, LLC (PTM), stating that during spill bucket testing, a fill pipe could not be removed at the onsite gasoline and diesel USTs. During follow-on repair work for the fill pipes and spill buckets, no evidence of contamination was observed (PTM 2019). CDLE/OPS granted regulatory closure to the site on March 6, 2020 (CDLE/OPS 2020).

ERO also reviewed a 2023 SCR prepared by TAIT stating that a piping sump test failure had occurred (TAIT 2023). Soil borings to 25 feet were conducted and sampled, and the results showed no petroleum hydrocarbon concentrations above laboratory reporting limits (TAIT 2023); groundwater was not encountered, and therefore, was not sampled (TAIT 2023). CDLE/OPS granted the site regulatory closure on October 11, 2023 (CDLE/OPS 2023).

**Glenwood Springs MOC, 2301 Wulfsohn Road.** ERO reviewed the July 30, 2021, SCR prepared by ERO stating that a 12,000-gallon combination gasoline/diesel fuel AST and two fuel dispensers were removed (ERO 2021). Soil samples were taken from beneath the tank and the dispenser island. Low levels of diesel range organics and oil range organics were found in all samples beneath the AST, well below CDLE/OPS Tier I RBSLs, and no petroleum hydrocarbon concentrations were detected above laboratory reporting limits in the samples beneath the fuel dispensers (ERO 2021). The CDLE/OPS granted the site regulatory closure on September 24, 2021 (CDLE/OPS 2021).

### **5.2.4 Colorado Division of Water Resources**

ERO reviewed records maintained by the Colorado Division of Water Resources (CDWR) for the project area. The CDWR has no records of water wells in the project area (CDWR 2024).

## **5.3 Interviews with Local Government Officials**

### **5.3.1 Local Health Department**

ERO contacted Garfield County on June 13, 2024 for information that may indicate environmental concerns in or near the project area. Mary Lynn Stevens, paralegal with Garfield County Attorney's Office, indicated that Garfield County does not have any responsive records for the project area (Stevens 2024).

### **5.3.2 Local Fire Department**

ERO contacted the City of Glenwood Springs on June 13, 2024 for information that may indicate environmental concerns in or near the project area. Ryan Muse, city clerk with City of Glenwood Springs, indicated that there are multiple response records to the project area, none of which are environmentally relevant (Muse 2024).

## **6.0 Site Reconnaissance**

A site reconnaissance was not required for this ISA and therefore, ERO did not conduct a site reconnaissance of the project area.

## **7.0 Evaluation**

### **7.1 Findings**

The project area consists of Wulfsohn Road southeast of the intersection with Midland Avenue, the West Glenwood Park & Ride, and portions of the parking lot for the RFTA GMF in Glenwood Springs, Colorado. The project area is generally bounded by undeveloped land and former municipal land undergoing construction for the new Glenwood MOC.

Federal, state, and local records identified the following sites or incidents typically associated with environmental concerns in or near the project area:

- 8 LUST or LAST sites in the surrounding area;
- 2 registered storage tank sites adjoining the project area;
- 1 VSQG adjoining the project area;
- 1 corrective action site; and
- 2 solid waste disposal sites.

## 7.2 Opinion

A summary of identified findings and ERO's determination if the findings constitute environmental concerns associated with the project area is presented in Table 6.

**Table 6. Findings and opinions summary.**

| Finding                                                                                                                                                                                                                                                                                                                                    | Environmental Concern | Rationale                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Sites identified in the surrounding area:</p> <ul style="list-style-type: none"><li>• 8 LUST or LAST sites in the surrounding area</li><li>• 2 registered storage tank sites adjoining the project area</li><li>• 1 VSQG adjoining the project area</li><li>• 1 corrective action site</li><li>• 2 solid waste disposal sites</li></ul> | No                    | The sites have received regulatory closure, are located hydrologically crossgradient to downgradient of the project area, are located too far away to adversely impact the project area or have no indication of having contributed to shallow soil contamination in the project area; groundwater is not anticipated to be encountered as part of the project. |

## 7.3 Conclusions and Recommendations

This assessment has revealed no environmental concerns in connection with the project area.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### *Lists of Federal RCRA facilities undergoing Corrective Action*

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

#### *Lists of Federal RCRA generators*

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

#### *Lists of state and tribal landfills and solid waste disposal facilities*

SHWF: A listing from the Solid Waste Information System, which is used to help administer the various programs of our solid waste and materials management program. It includes a wide variety of types of facilities and sites, and includes information obtained over several decades and numerous legacy data systems.

A review of the SHWF list, as provided by EDR, and dated 01/29/2024 has revealed that there are 2 SHWF sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Lists of state and tribal leaking storage tanks***

LTANKS: Active and Closed OPS Petroleum Release Events in Colorado. Includes the OPS Open Event locations, but also shows locations of closed events (releases that have been issued a No Further Action determination).

A review of the LTANKS list, as provided by EDR, and dated 02/01/2024 has revealed that there are 5 LTANKS sites within approximately 0.5 miles of the target property.

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Health's Leaking Underground Storage Tank List.

A review of the LUST list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

LUST TRUST: Reimbursement application package. The 1989 Colorado General Assembly established Colorado's Petroleum Storage Tank Fund. The Fund reimburses eligible applicants for allowable costs incurred in cleaning up petroleum contamination from underground and aboveground petroleum storage tanks, as well as for third-party liability expenses. Remediation of contamination caused by railroad or aircraft fuel is not eligible for reimbursement. The Fund satisfies federal Environmental Protection Agency financial assurance requirements. Monies in the Fund come from various sources, predominantly the state environmental surcharge imposed on all petroleum products except railroad or aircraft fuel.

A review of the LUST TRUST list, as provided by EDR, and dated 12/12/2023 has revealed that there is 1 LUST TRUST site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

Facility Id: 1655

### ***Lists of state and tribal registered storage tanks***

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The source is the State Oil Inspector's Office's Tank List.

A review of the UST list, as provided by EDR, and dated 05/23/2024 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

## EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

**Environmental Interest/Information System:**

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of Federal NPL (Superfund) sites***

##### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

|                                         |                                        |

##### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|                                         |                                        |

|                                         | Data Release Frequency: Quarterly      |

##### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Next Scheduled EDR Contact: 11/28/2011  
Data Release Frequency: No Update Planned

### ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 02/29/2024  
Date Data Arrived at EDR: 03/01/2024  
Date Made Active in Reports: 03/27/2024

### ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023  
Date Data Arrived at EDR: 12/20/2023  
Date Made Active in Reports: 01/24/2024  
Number of Days to Update: 35

Source: Environmental Protection Agency  
Telephone: 703-603-8704  
Last EDR Contact: 03/26/2024  
Next Scheduled EDR Contact: 07/08/2024  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/22/2024  
Date Data Arrived at EDR: 05/01/2024  
Date Made Active in Reports: 05/24/2024  
Number of Days to Update: 23

Telephone: 800-424-9346  
Last EDR Contact: 05/01/2024  
Next Scheduled EDR Contact: 07/22/2024  
Data Release Frequency: Quarterly

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

|                                         |                                        |
|-----------------------------------------|----------------------------------------|

### ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

|                                         |                                         |

|                                         | Data Release Frequency: Quarterly       |

### ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

|                                         |                                         |

|                                         | Data Release Frequency: Quarterly       |

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

|                                         |                                         |
|-----------------------------------------|-----------------------------------------|
| Date of Government Version: 12/04/2023  | Source: Environmental Protection Agency |
| Date Data Arrived at EDR: 12/06/2023    | Telephone: 303-312-6149                 |
| Date Made Active in Reports: 12/12/2023 | Last EDR Contact: 03/19/2024            |

|                                         | Data Release Frequency: Quarterly       |

### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

|                                         |                                         |

#### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

|                                         |                                         |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/12/2023

Date Data Arrived at EDR: 12/13/2023

Date Made Active in Reports: 02/28/2024

Number of Days to Update: 77

Source: National Response Center, United States Coast Guard

Telephone: 202-267-2180

Last EDR Contact: 03/19/2024

Next Scheduled EDR Contact: 07/01/2024

Data Release Frequency: Quarterly

## ***Lists of state- and tribal hazardous waste facilities***

SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

### TRUST: Lust Trust Sites

Reimbursement application package. The 1989 Colorado General Assembly established Colorado's Petroleum Storage Tank Fund. The Fund reimburses eligible applicants for allowable costs incurred in cleaning up petroleum contamination from underground and aboveground petroleum storage tanks, as well as for third-party liability expenses. Remediation of contamination caused by railroad or aircraft fuel is not eligible for reimbursement. The Fund satisfies federal Environmental Protection Agency financial assurance requirements. Monies in the Fund come from various sources, predominantly the state environmental surcharge imposed on all petroleum products except railroad or aircraft fuel.

### ***State and tribal institutional control / engineering control registries***

#### AUL: Environmental Real Covenants List

Senate Bill 01-145 gave authority to the Colorado Department of Public Health and Environment to approve requests to restrict the future use of a property using an enforceable agreement called an environmental covenant. When a contaminated site is not cleaned up completely, land use restrictions may be used to ensure that the selected cleanup remedy is adequately protective of human health and the environment.

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: Quarterly

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### Other Ascertainable Records

#### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Data Release Frequency: Quarterly

### EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013  
Date Data Arrived at EDR: 03/21/2014

Data Release Frequency: No Update Planned

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017

Next Scheduled EDR Contact: 06/10/2024  
Data Release Frequency: Annually

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Varies

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: Quarterly

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007

### HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/19/2006

Data Release Frequency: Varies

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### PFAS TRIS: List of PFAS Added to the TRI

Section 7321 of the National Defense Authorization Act for Fiscal Year 2020 (NDAA) immediately added certain per- and polyfluoroalkyl substances (PFAS) to the list of chemicals covered by the Toxics Release Inventory (TRI) under Section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) and provided a framework for additional PFAS to be added to TRI on an annual basis.

### PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

|                                         |                                         |

### PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

### PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

### PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

### PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

### PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

### PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

### UMTRA: Uranium Mill Tailings Sites

There were nine uranium mill tailings sites in Colorado designated for cleanup under the federal Uranium Mill Tailings Radiation Control Act. These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going.

Data Release Frequency: Semi-Annually

### UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### COUNTY RECORDS

#### ADAMS COUNTY:

LF ADAMS: Summary Report on Methane Gas Hazards and Surveys Conducted on Domestic and Demolition Landfills in Adams County  
As of May 8, 1978, all known landfills or dumping sites in the Adams County area have been surveyed.

Date of Government Version: 05/08/1978  
Date Data Arrived at EDR: 02/16/1995  
Date Made Active in Reports: 04/04/1995  
Number of Days to Update: 47

Source: Tri-County Health Department  
Telephone: 303-761-1340  
Last EDR Contact: 01/27/1995  
Next Scheduled EDR Contact: N/A  
Data Release Frequency: No Update Planned

#### ARAPAHOE COUNTY:

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### LF ARAPAHOE: A Survey of Landfills in Arapahoe County

A survey of Arapahoe County was conducted from August through November, 1977, of all open and closed landfills and dumpsites in the county. Each of the sites found was classified as domestic or demolition.

Date of Government Version: 12/31/1978  
Date Data Arrived at EDR: 02/16/1995  
Date Made Active in Reports: 04/04/1995

#### LF DENVER CO METHANE: Investigation of Methane Gas Hazards

The purpose of this study was to assess the actual and potential generation, migration, explosive and related problem associated with specified old landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. Eight sites determined to be priorities due to population density and potential hazards to population and property were selected by the Colorado Department of Health.

Date of Government Version: 01/01/1981

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 02/05/2024  
Date Data Arrived at EDR: 02/06/2024  
Date Made Active in Reports: 04/25/2024  
Number of Days to Update: 79

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Daycare Centers: Daycare Listing

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### **FEMA FLOOD ZONE**

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |

|------------------------------------------------|
| YES - refer to the Overview Map and Detail Map |
|------------------------------------------------|

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION<br/>FROM TP</u> | <u>GENERAL DIRECTION<br/>GROUNDWATER FLOW</u> |
|---------------|-----------------------------|-----------------------------------------------|
| Not Reported  |                             |                                               |

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: Chilton

Soil Surface Texture: channery loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information |           |           |                          |                                                                       |                                                                 |                                              |                      |
|------------------------|-----------|-----------|--------------------------|-----------------------------------------------------------------------|-----------------------------------------------------------------|----------------------------------------------|----------------------|
| Layer                  | Boundary  |           | Soil Texture Class       | Classification                                                        |                                                                 | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH)   |
|                        | Upper     | Lower     |                          | AASHTO Group                                                          | Unified Soil                                                    |                                              |                      |
| 1                      | 0 inches  | 12 inches | channery loam            | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel | Max: 42.34<br>Min: 14.11                     | Max: 8.4<br>Min: 7.9 |
| 2                      | 12 inches | 22 inches | very channery sandy loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel | Max: 42.34<br>Min: 14.11                     | Max: 8.4<br>Min: 7.9 |

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Riparian Vegetation Data

Source: Division of Wildlife

Telephone: 970-416-3360

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Colorado GIS Well Database

Source: Office of State Engineer, Division of Water Resources

Telephone: 303-866-3581

The GIS Well database includes all wells that the Division of Water Resources permits.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Locations

Source: Department of Natural Resources

Telephone: 303-894-2100

### RADON

#### State Database: CO Radon

Source: Department of Public Health & Environment

Telephone: 303-692-3090

Radon Study in Colorado

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**Search Results:**

| <u>Year</u> | <u>Scale</u> | <u>Details</u>                       | <u>Source</u> |
|-------------|--------------|--------------------------------------|---------------|
| 2019        | 1"=500'      | Flight Year: 2019                    | USDA/NAIP     |
| 2015        | 1"=500'      | Flight Year: 2015                    | USDA/NAIP     |
| 2011        | 1"=500'      | Flight Year: 2011                    | USDA/NAIP     |
| 2006        | 1"=500'      | Flight Year: 2006                    | USDA/NAIP     |

Glenwood Maintenance Facility Expansion  
W.G. Transit Center & Administration Offices  
Phase 6 – Phase 8  
Glenwood Springs, Colorado

## 100% Schematic Design Narrative

Prepared by SEH and their Design Consultants

## **General Information**

### **A. Project Description**

1. Nestled in the scenic landscapes of Glenwood Springs, Colorado, the Roaring Fork Transportation Authority (RFTA) Transit Center, Administration Building and Storage Building aim to provide a productive workplace environment and unparalleled transportation services to the vibrant community of Glenwood Springs.

### **B. Scope of Work**

1. The project spans across three distinct phases – Phase 6A, Phase 6B, and Phase 8

### **Phase 6A – Transit Center**

- A.** Phase 6A will be a single-level building occupying 3,093 gross square feet designed to function as a Transportation Hub offering a welcoming and comfortable environment for its users. The station houses a spacious lobby/waiting area and ticketing area where passengers can purchase tickets for their journeys. Furthermore, the station features essential support spaces, including a bus driver lounge area, and a kitchenette, catering to the diverse needs of both passengers and staff. Complementing its functional interior, the exterior of the building is adorned with carefully landscaped surroundings, complete with benches to accommodate waiting passengers and facilitate efficient bus activities.

### **Phase 6B – W.G. Administration Building**

- A.** Phase 6B consists of the development of a 22,956 gross square feet three-story building designed not only to cater to RFTA's existing administrative needs but also anticipate future growth by prioritizing flexibility and efficiency. This facility will function as the center for RFTA's administrative functions, housing offices, meeting rooms, and support spaces tailored to various departments. From administration and finance to procurement and marketing, the complex accommodates the diverse needs of RFTA's administrative activities. In addition, the design also incorporates multiple coffee station, a small workout space and multiple exterior spaces, including a Roof Balcony on the third floor, for the

enjoyment of employees during their breaks. Furthermore, this phase encompasses the development of the parking area, landscaping, and a pedestrian bridge, designed to provide easy access from Wulfsohn Rd.

### **Phase 8 – Storage Building**

- A.** In Phase 8, RFTA addresses the crucial need for storage infrastructure to support its day-to-day activities. This one-story storage building is purposefully designed to accommodate the storage of materials and resources essential for RFTA's operations.
- B.** Our design philosophy for this project aligns closely with the RFTA WG Transit Center and Administration Building Program of Requirements, with a focus on addressing specific operational, administrative, expansion, environmental, and safety concerns.
- C.** Safety stands as the highest priority, considering the inherent risks associated with coordinating pedestrians, buses, and Wulfsohn Road traffic on the existing site. Furthermore, our commitment to sustainable practices resonates with the RFTA's dedication to the environment. While the project aims to implement efficient energy strategies where feasible, it will not pursue green building endorsements.
- D.** Embracing the architectural and aesthetic essence of western Colorado and the surrounding community, our design ensures alignment with local planning regulations. In addition our design also ensures compliance with all regulatory provisions and aims to meet or exceed all requirements while serving the best interests of RFTA and the community.

### **Landscape Design**

#### **Phase 6A – Transit Center**

- A.** The landscape for the transit station is designed to provide visual interest, guide wayfinding, and provide shelter and gathering space.
- B.** Raised planters located throughout the platform provide a purposeful circulation experience, guiding transit users towards bus queuing zones and to the shelter of the station building. The planters are organically shaped and are envisioned to be tilted and varying in height, mimicking the dynamic flow of water through local riverways. This sense of movement also evokes the eddy and flow of people traveling through the station and up and down valley.
- C.** While the planters provide a physical clue for the flow of pedestrian traffic, bench seating and two canopy shelters provide places for rest, gathering, and protection from the elements.
- D.** The benches are shown as separate from the planters, which allows for flexibility in form and materiality of the planters as they do not need to necessarily function as seating. Benches in the form of site furnishings also allows the seating to more easily work with the slope of the platform. Benches with and without backrests are shown on the plan. An off-the-shelf product manufactured in both backless and with backrests will help unify the overall aesthetic and also keep maintenance of site furnishings straightforward.
- E.** Two overhead canopies are provided; one is located on the eastern side of the platform and one is located on the western side. These canopies are associated with seating, but are also large enough to provide standing room as well. The roof forms of the canopies would echo the angle of the Station building architecture, but in shed form.
- F.** There is an enclosed bike storage building shown to the west of the Station building. This building would include internal, secured bike storage, with the roof extending past the footprint on the long axis to create exterior covered bike parking.

- G. Trees are located to provide shade, reinforce wayfinding, and provide visual interest. Shade trees are located in the platform hardscape, while smaller ornamental trees are located in the planters. Herbaceous plantings are for the most part contained within the planters. The plant palette for the platform emphasizes drought tolerant woody and herbaceous plant material, with an emphasis on low maintenance groundcovers, shrubs, and grasses.
- H. The landscape downhill from the transit center, associated with the surface parking and to the west and north of the platform, is envisioned as an extension of the existing native plant palette at the Wulfsohn Road-Midland Avenue intersection. This palette will create a seamless landscape aesthetic when viewed from Midland Avenue or from the west.

### **Phase 6B – W.G. Administration Building**

- I. The landscape for the administration building is designed to meet the POR stated program needs and create a unique identity with some echoing of elements found at the transit center.
- J. The design provides a strong emphasis of the building entry by locating planters to direct views towards the front doors and reinforce the angle of the architectural canopy and vestibule. The planters are visible when vehicles enter the parking lot, providing an early indication that this is an important location.
- K. At the rear of the building, an outdoor space with patio is shown with casual seating, a picnic table with overhead canopy, trees, and an artificial turf area. The patio is approximately 80' x 25' feet and 2000 square feet in area. This outdoor space can accommodate individual employee breaks or larger groups spilling out from the multi-purpose room. Amphitheater style steps are shown on the south west side of the patio near the covered picnic table. This area can be used for outdoor classroom space or informal gatherings.
- L. The patio steps down to the native landscape where a soft-surface path creates an informal circuit with benches oriented towards the western view. This is a place where employees can have a private moment, take a phone call, or get up from their desks and move around.

### **Phase 8 – Storage Building**

- A. There is no ornamental landscaping associated with the storage building. Where site disturbance occurs, the revegetation shall consist of native plant material that will visually blend with the existing sagebrush meadow.

## **Architectural Design**

- A. Our design philosophy for this project aligns closely with the RFTA WG Transit Center and Administration Building Program of Requirements, with a focus on addressing specific operational, administrative, expansion, environmental, and safety concerns.
- B. Safety stands as the highest priority, considering the inherent risks associated with coordinating pedestrians, buses, and Wulfsohn Road traffic on the existing site. Furthermore, our commitment to sustainable practices resonates with the RFTA's dedication to the environment. While the project aims to implement efficient energy strategies where feasible, it will not pursue green building endorsements.
- C. Embracing the architectural and aesthetic essence of western Colorado and the surrounding community, our design ensures alignment with local planning regulations. In addition our

design also ensures compliance with all regulatory provisions and aims to meet or exceed all requirements while serving the best interests of RFTA and the community.

**D. Building Program Requirements**

1. Refer to Appendix for updated Building Program Requirements.

**Phase 6A – Transit Station**

- A.** The Project consists of one new BRT Station in Glenwood Springs, CO. The BRT Station will be one-story and include spaces which support buses on routes, customer service, storage, and driver support.

1. Area: appx. 3,093 gsf
2. Stories/Height: 1 Story / 21'-8"
3. Occupancy: Business (per IBC 2021)
4. Construction Type: Type II-B (per IBC 2021)
5. Sprinklers: NFPA 13 (full)
6. Frontage: Min 30 feet on all sides

**Phase 6B – Administration Building**

- B.** The Project consists of one new administration building in Glenwood Springs, CO. The administration building will be three-story and include spaces which support the Owner's administration and planning staff, facility management, and maintenance staff and operations.

1. Area: appx. 31,383 gsf
2. Stories/Height: 3 Stories / 41'-10"
3. Occupancy: Business (per IBC 2021)
4. Construction Type: Type II-B (per IBC 2021)
5. Sprinklers: NFPA 13 (full)
6. Frontage: Min 30 feet on all sides

**Phase 8 – Storage Building**

- C.** The Project consists of one new maintenance building in Glenwood Springs, CO. The maintenance building will be one-story and include spaces which support the Owner's vehicle fleet maintenance operations.

1. Area: appx. 3,640 gsf
2. Stories/Height: 1/20 feet
3. Occupancy: Storage, Business (per NFPA 5000)
4. Construction Type: Type II-000 (per NFPA 5000)
5. Sprinklers: NFPA 13 (full)
6. Frontage: Min 30 feet on three sides

**D. Exterior Wall Systems**

1. Phase 6A – Transit Station
  - i) Metal Stud Wall w/ Stone Venner or Hardi Plan
2. Phase 6B – Administration Building

- i) Precast Concrete wall with Stone / Brick Vanner
- 3. Phase 8 – Storage Building
  - i) CIP Concrete with CMU Vanner

#### E. Roofing Systems

1. There are two main types of roof systems: low-slope and steep-slope roofs. Low-slope roofs have a slope between 1/4 inch per foot and 3 in 12, while steep-slope roofs have a pitch greater than 3 in 12.
2. Low-Slope Roof Systems
  - i) Include membrane roofs that must meet specific conditions to ensure adequate performance. Firstly, the minimum slope for low-slope roofs must be 1/4 inch per foot. Secondly, all low-slope roofs must be cool roofs to improve energy performance. Cover boards must also be provided above the insulation for all low-slope roofs.
  - ii) Additionally, all membrane roofs must be fully adhered, and ideally, should slope toward the perimeter of the building to prevent water from ponding on the roof. When interior drains are used, it's important to consider eliminating potential water ponding and debris collection at the drain to maintain the roof's integrity. By adhering to these approved low-slope roof conditions, the design will ensure that the roofing systems are efficient, durable, and reliable.
  - iii) Roof design is intended to provide positive drainage.
  - iv) The minimum acceptable roof slope is 1/4 inch per foot
  - v) Roof drains are located along the roof perimeter
  - vi) Each roof drain shall be accompanied by an overflow drain.
  - vii) Membrane shall be 60 mills TPO single ply membrane (type III, reinforced,) fully adhered, high reflectivity
  - viii) The roof waterproofing membrane system shall be highly resistive to physical damage.

3. Roof accessories: roof hatches to access roof levels
  - i) Roof ladders where required to access all roof levels not accessibly by hatch

- ii) Walkway pads at all hatches, ladders and equipment requiring maintenance and other high traffic areas
- 4. Canopies and Shade Structures
  - i) Metal clad canopies are provided at entry locations
- 5. Steep-Slope Roof Systems
  - i) The slope of the roof must be at least 3 units vertical in 12 units horizontal. Additionally, in colder climates, ice and water shield must be installed on steep-slope roofs to prevent damage caused by ice dams.
  - ii) Roof drains are located along the roof perimeter
  - iii) Each roof drain shall be accompanied by an overflow drain.
  - iv) Membrane shall be 60 mills TPO single ply membrane (type III, reinforced,) fully adhered, high reflectivity
  - v) The roof waterproofing membrane system shall be highly resistive to physical damage.
- 6. Roof Flashing
  - i) Copings and Flashings
    - (1) Prefinished metal to match building finishes

#### **F. Interior Partitions**

- 1. Interior Partitions shall be 5/8" minimum Gypsum Board over Metal stud framing at 16" on center.
- 2. Interior Partition Selection Criteria
  - i) At areas where sound transmission is a concern (offices, or conference spaces) sound attenuating batt insulation and acoustic sealant will be utilized.
  - ii) Where greater sound isolation is required, improved sound walls will be implemented including sound attenuating batt insulation with multiple layers of gypsum board and resilient channels.
  - iii) Sound walls shall use acoustical sealant, and penetrations shall be limited and staggered between stud spacing.
  - iv) Acoustical separation requirements and acoustical ratings description:
    - (1) 1hr rated – UL U419 – STC 40 min.
    - (2) 2hr rated - UL U419 - STC 52 min.
- 3. Finishes
  - i) Gypsum board: Type X, level-4 finish at exposed areas.
  - ii) Wall finishes are selected based on their ability to withstand moderate to heavy abuse as well as ability to be maintained by maintenance personnel.
  - iii) Toilet Rooms: Restroom walls shall be porcelain or glazed tile from floor to a minimum of 6'-0" above finished floor. If tile is not taken to the ceiling, paint shall be epoxy. Shower wall shall be porcelain or glazed tile from floor to ceiling.

#### 4. Design Flexibility

- i) Abuse resistant gypsum board will be applied depending on the nature of the space and may be single sided or on both sides where partitions separate similar activities.

### G. Thermal and Moisture Protection

#### 1. Exterior walls:

- i) 3 inch Continuous Polyisocyanurate Foam-Plastic Board Insulation (R: 6.8/inch) total R value of 20.4
- ii) Minimum R13 Glass-fiber blanket insulation

#### 2. Roof:

- i) 5 inch Polyisocyanurate Foam-Plastic Board Insulation (R:6.8/inch) total r value of 34

#### 3. Maintenance Structures:

##### i) Exterior walls:

- (1) 3 inch Continuous Polyisocyanurate Foam-Plastic Board Insulation (R: 6.8/inch) total R value of 20.4
- (2) Minimum R13 Glass-fiber blanket cavity insulation

##### ii) Roof:

- (1) 5 inch Polyisocyanurate Foam-Plastic Board Insulation (R:6.8/inch) total R value of 34

- iii) Breaks in the thermal barrier should be avoided whenever possible. The Designer of Record shall provide design and details that allow for continuous insulation for all building components.

- iv) All fiberglass insulation shall be formaldehyde free and conform to ASTM C665 Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

- v) Rigid insulation must conform to ASTM C578 Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.

- vi) Air Barriers

- vii) Vapor Retarder

- viii) Moisture Barrier
- ix) Flashing
- 4. Exterior Windows
  - i) 1-inch insulated units w/ low-e coating.
  - ii) Tinting off the glazing shall be provided to reduce glare and heat gain.
  - iii) Thermally broken aluminum frame construction
  - iv) Commercial grade and vandal resistant hardware
- 5. Interior Windows
  - i) Window units are provided to facilitate supervision between interior spaces.
  - ii) Tempered at safety locations, heat-strengthened where required, and meeting requirements for fire-resistant glazing at rated locations.
  - iii) 1" clear float glass panes
  - iv) Steel hollow metal frames
- 6. Entry and Storefront Systems
  - i) Heavy duty 4-1/2-inch thermally broken aluminum framing systems
  - ii) 1-inch insulated glazing and low-E coating.
  - iii) Glazing at ground doors and as specified in code shall be tempered safety glass
  - iv) Stiles shall be at minimum 2" thick
  - v) Center mullions provided at double entry doors

## **H. Door Systems**

- 1. Steel Doors
  - i) Interior steel doors shall meet the requirements of SDI-100 Grade II – Heavy Duty 1-3/4" thick; 18 gage faces, seamless. Interior steel doors over 36" wide shall meet the requirements of SDI-100 Grade III – Extra Heavy Duty 1-3/4" thick; 16 gage faces, seamless. Interior steel frames shall be minimum 16 gage steel (minimum 14 gage steel for openings over 36" wide). Provide galvanized doors and frames to ASTM A653/A653M Class 60 where humidity or wash-down operations are present.
  - ii) All doors shall be sized to facilitate movement of equipment (new or replacement). All doors shall be a minimum of 3'-0" wide and 7'-0" high.
- 2. Wood Doors
  - i) Wood doors may include vision panels and additional features without compromising performance. Doors may have power assist or electronic locking mechanisms. Fabrication standards must meet industry requirements, with hollow metal frames factory primed. Wood doors must use bonded structural composite core, AWI Premium Grade, with shop-finished hardwood veneer. Grade 1 heavy-duty mortise locks are required. Frames should be Level 3, 0.053-inch thick galvanized, with a lifetime warranty, STC 45, and a 15-minute forced entry rating. All doors must facilitate equipment movement, with a minimum width of 3 feet and height of 7 feet.
- 3. Frames
  - i) Interior frames shall be fully welded hollow metal, 16 gauge, fully grouted at masonry and spot grouted at rated stud walls. Frames shall be fully prepped for hardware including 12 gauge reinforcing where applicable. Ratings and labels as required.
- 4. Access Doors
  - i) Typical interior access doors shall be a minimum of 30" x 30" minimum and sized for equipment that the opening serves.
  - ii) Frame: 16 gage steel, 1" wide flange; reinforce at strike.
  - iii) Panel: 14 gage steel, sandwich type; reinforce at latch; baked enamel primer coat.

- iv) Hardware: concealed, pin-type, 175° opening hinge; self-latching, lever-handle – operable from both sides; screwdriver operated, metal cam lock.
- 5. Hardware
  - i) All door assemblies installed in the means of egress shall meet the requirements of the National Fire Protection Association (NFPA), 101 Life Safety Code.
  - ii) All hardware to have a minimum 2-year warranty unless noted otherwise.
  - iii) Door closers shall be LCN 4040-series closers with 10-year warranty.
  - iv) Hinges shall be maintenance free with lifetime warranty.
  - v) Exit devices shall be Von Duprin 99-series exit devices with 3-year warranty.
  - vi) Surface flush bolts and floor mounted doorstops are not permitted.
  - vii) Avoid overhead stops.
  - viii) Provide drip edge, door bottom, astragal, gasketing as appropriate for the location and use.
  - ix) All Hardware shall be satin chromium/stainless finish, dependent upon base metal:
    - (1) BHMA Finish Standard #626 (US Standard Finish US26D)
    - (2) BHMA Finish Standard #628 (US Standard Finish US28)
    - (3) BHMA Finish Standard #652 (US Standard Finish US26D)
    - (4) BHMA Finish Standard #630 (US Standard Finish US32D)

#### **I. Signage Systems**

1. Interior Signage: As required by code, all rooms will be identified at their respective entries with an accessible sign. Each room sign will include the room name and room number which correspond to the building plan and fire alarm system plans. The name and number designations will be shown both in contrasting text and accessible Braille lettering.
2. Attach signs to wall surfaces using mounting tape squares in each corner of the sign except at each top corner and one centered at bottom of sign for 6" x 6" units. Bathroom signs are to be 8" wide x 9" high. All doors shall to be numbered with a sign on the upper frame of the door.
3. Locate surface-mounted signs on the wall adjacent to the latch side of the door (or the nearest adjacent wall) at 60" above finished floor from the centerline of the sign (any size) and out of the swing of the door. Mount signs with right edge 4" from inside face of the door jamb.
4. Exterior Building Signage: The building's design should allow space for the name on the front elevation. Individually cut or cast metal letters shall be provided.

#### **J. Interiors**

1. Finishes have been selected per the requirements stated in the RFTA WG Transit Center and Administration Building – Program of Requirements.
2. Ceilings
  - i) Ceiling heights shall be a minimum of 9'-0" above finished floor.
3. Acoustical Ceilings:

Surface Texture: Fine textures with perforations.

Acoustics Open Office: NRC ≥ 0.85; CAC ≥ 35

- i) Ceiling tiles below service items shall be uncut, easily removed, and shall be free of devices and fixtures.
- 4. Gypsum Ceilings:
  - i) Gypsum ceilings and soffits shall be painted with flat paint finish except as noted. Restrooms, showers, and housekeeping rooms shall be gypsum ceiling with gloss epoxy paint finish.
- 5. Above Ceiling Access:
  - i) Provide access as required for access to service and maintenance items above ceiling. Access shall not be hindered by fixtures or devices in ceiling panels, or by conduit, pipes, et.
- 6. Floor Finishes
  - i) Carpet:
    - (1) Broadloom/m/Carpet Tile: Texture appearance retention rating of 3 or higher (Heavy traffic). Type 6 or Type 6, BCF Nylon. 10-year warranty. 10% Post-Consumer Recycled Content. NSF 140 Gold Level Certified. If broadloom, provide pad. Provide 4" rubber straight base molding – corners and special shapes shall be factory-made (no field bends permitted).
  - ii) Resilient Tile:
    - (1) Vinyl Composition Tile: Standard VCT. Class I Solid Color; Class II Through Pattern. Thickness of 0.125" or greater. Static load limit greater than or equal to 125 psi. Specialty finish applied. 5-year warranty. 5% recycled content. Meets NSF, is CA 1350 compliant and Floor Score Certified. Provide 4" rubber covered base molding – corners and special shapes shall be factory-made (no field bends permitted).
  - iii) Rubber Tile:
    - (1) Class II Laminated A&B (A=Solid Color Wear Layer; B=Mottled Wear Layer). Thickness of 0.080" or greater. 5-year warranty. 0% VOC emissions – CA 1350

compliant. Provide 4" rubber coved base molding – corners and special shapes shall be factory made (no field bends permitted).

iv) Rubber Gym Tile:

- (1) Rubber Tile: High-impact flooring designed for fitness setting. Thickness of 3/8" or greater. 5-year warranty. 0% VOC emissions – CA 1350 compliant. Provide 4" rubber coved base molding – corners and special shapes shall be factory made (no field bends permitted).

v) Seamless Resilient Sheet:

- (1) Seamless Sheet Vinyl: Heterogeneous Type I (Clear Wear Layer 0.020 inches) Type II (Filled Wear Layer 0.050 inches). Static load limit greater than or equal to 175 psi. Specialty topcoat applied. 5-year warranty. 5% recycled/renewable content meets Sustainability NSF332 and is CA 1350 compliant. Manufacturer approved heat welding.
- (2) Extend flooring up wall for 6" base – corners and special shapes shall be purpose-specific and factory-made accessories and sealed to flooring system.

vi) Linoleum:

- (1) Thickness no less than 2.5mm. Static load limit greater than or equal to 150 psi. Factory surface applied. 2-year warranty. 10% recycled/renewable content. 30% minimum binder content. Is VOC emission – CA 1350 compliant. Manufacturer approved heat welding. Extend flooring up wall for 6" base – corners and special shapes shall be purpose-specific and factory-made accessories and sealed to flooring system.

vii) Tile:

- (1) Porcelain Tile: Conforms to ANSI A137.1. Commercial (Abrasion Class IV). Virtuous (P3/E3/O3). Stain and chemical Class
- (2) B or better. 18-month warranty. Tile in toilet and shower rooms shall use non-white, epoxy grout.
- (3) Provide purpose-specific factory-made tile shapes for (minimum 4") base; inside corners; outside corners; etc.

viii) Heavy-duty Tile

- (1) Quarry Tile: Conforms to ANSI A137.1. Commercial (Abrasion Class IV). Virtuous (Class E3). Breaking strength greater than or equal to 350 lbs. Stain and chemical Class B or better. 18-month warranty. Tile at housekeeping rooms shall use non-white, epoxy grout. Provide matching base tile to a minimum of 1'-0" above finished floor.

ix) Concrete Coating

- (1) Above-Grade Parking Deck Coating: Provide a clear, filmless, low solid, penetrating water repellent at horizontal concrete surfaces. Coating shall resist water and chloride ion intrusion, stain damage, freeze/thaw spalling, efflorescence, and rust damage.
- (2) Basis of Design: Themec Dur-A-Pell 20. Provide striping for safety systems, accessibility clearances, lane designations, parking spaces/limits, and door clearance zones as a minimum.

x) Service Bays:

- (1) Provide an 1/8" thick minimum epoxy coating with urethane topcoat system. System shall be self-leveling and protect surface from impact, abrasion, wet conditions, and mild chemicals. Surface preparation shall include thoroughly

cleaning and blasting in accordance with SSPC-SP13/NACE No. 6 Surface Preparation of Concrete prior to application of coating system. Basis of Design: Modified Polyamine Epoxy Tnemec Series 237 PowerTread. with Aliphatic Moisture Cured Urethane Tnemec Series 247 EverThane topcoat. Provide striping as required by the Owner.

## **Structural Design**

- A. The authority having jurisdiction is the City of Glenwood Springs, CO. Glenwood Springs has adopted the International Building Code, 2021 Edition (2021 IBC) with local amendments. The design information, based on the more stringent of the 2021 IBC with Glenwood Springs amendments and ASCE 7-16, is listed in Table 4.1.
- B. The structures fall into Risk Category II and assumes Occupancy A-3 for the assembly areas, B for the business areas, and S-2 for the storage areas.

**Table 4.1: Building Design Information<sup>1</sup>**

| <b>Design Component</b>           | <b>ASCE 7-16 / 2021 IBC</b>                                                            |

| Design Loads                           | Value / Description                |
|----------------------------------------|------------------------------------|
| <b>Geotechnical Criteria:</b>          |                                    |
| <b>Foundation Type:</b>                | Spread Footers                     |
| <b>Bearing Material:</b>               | Improved Soils and Structural Fill |
| <b>Net Allowable Bearing Pressure:</b> | 4,000 psf                          |

## B. Materials

1. The structural system is expected to be comprised on Light-framed walls (cold-formed steel) with wood panels, structural steel members, and cast in place concrete. The following is a list of assumed materials and properties.
  - i) Concrete: 4,000 psi (minimum) 28-day strength
  - ii) Steel: ASTM A992, A500, A36
  - iii) Wood: Hem-Fir

## C. Framing

1. Roof Framing
  - i) The roof framing is expected to consist of steel beams, supported by exterior load bearing Light-framed walls (cold-formed steel) with wood panels, and interior steel girders and columns, with steel decking.
2. Lateral System
  - i) The lateral system is expected to consist of Light-framed walls (cold-formed steel) with wood structural panels.

## D. Foundations

1. Slab on Grade
  - i) SEH anticipates a slab on grade supported on at least 6 inches of base course.
2. Foundations

- i) Based on the most recent geotechnical report, completed in August of 2023, SEH expects that the building will be supported on shallow, reinforced concrete spread footers bearing on improved soils and structural fill.'

### **Phase 6B - Administration Building**

#### **A. Design Loads**

**Table 4.4: Administration Building Design Loads**

| <b>Design Loads</b>                  | <b>Value / Description</b>              |
|--------------------------------------|-----------------------------------------|
| <b>Live Load</b>                     |                                         |
| Roof, $L_r$ :                        | 20 psf (reducible per code)             |
| Floor (Office Areas):                | 50 psf                                  |
| Floor (Lobby Areas and Corridors):   | 100 psf                                 |
| Floor (Storage):                     | 125 psf                                 |
| <b>Snow Load</b>                     |                                         |
| Ground Snow Load                     | 50 psf                                  |
| $p_g$ : Flat Roof, $p_f$ :           | 31.5 psf                                |
| Exposure Factor, $C_e$               | 0.90 (Fully Exposed)                    |
| : Importance Factor,                 | 1.00 (Risk Category II)                 |
| <b>Wind Load</b>                     |                                         |
| Ultimate Wind Speed,                 | 115 mph (Risk Category II) <sup>1</sup> |

## **B. Materials**

1. The structural system is expected to be comprised on precast walls, structural steel members, and cast in place concrete. The following is a list of assumed materials and properties.
  - a. Concrete: 4,000 psi (minimum) 28-day strength
  - b. Steel: ASTM A992, A500, A36

## **C. Framing**

1. Roof Framing
  - i) The roof framing is expected to consist of steel beams, supported by exterior load bearing precast walls, and interior steel girders and columns, with steel decking.
2. Floor Framing
3. The floor framing is expected to consist of steel beams, supported by exterior load bearing precast walls, and interior steel girders and columns, with composite steel decking.
4. Lateral System
  - i) The lateral system is expected to consist of precast shear walls.

## **D. Foundations**

1. Slab on Grade
  - i) SEH anticipates a slab on grade supported on at least 6 inches of base course.

## **E. Foundations**

1. Based on the most recent geotechnical report, completed in August of 2023, SEH expects that the building will be supported on shallow, reinforced concrete spread footers bearing on improved soils and structural fill.

## **F. Retaining Walls**

1. The retaining walls adjacent to the building are expected to consist of reinforced concrete.

## **G. Pedestrian Bridge**

1. The pedestrian bridge adjacent to the building is expected to be a pre-engineered truss bridge supported by reinforced concrete abutments.

## **Mechanical Design**

### **Phase 6A - Transit Station**

## **A. Project Description**

1. Mechanical, Electrical, Plumbing and Fire Protection design of the new BRT Station will meet the following criteria. This criteria outlines proposed systems for the BRT Station and represents a general overview of the design approach. Code compliant systems will

be designed and installed to include acceptance and approval from the proper Authorities Having Jurisdiction (AHJ).

## **B. Fire Protection**

1. Code Compliance
  - i) Applicable Local and State Building and Fire Codes and Amendments
  - ii) NFPA 13 Standard for the Installation of Sprinkler Systems
  - iii) Owner Standards and Requirements
2. Incoming Fire Service Main
  - i) The water-based fire suppression system will be served from a new combined fire and domestic water service main supplied by an existing municipal water main. Incoming fire service main will be located in a designated water entry area on the first floor. Connection to the city water main will be by the Civil Contractor. The sprinkler system and Fire Sprinkler Contractor work will begin at the point of connection at the flange inside the building. Hydrant flow tests of the municipal water main will be required and coordinated with the water purveyor to ensure adequate capacity at the site.
  - ii) Reference hydrant flow data will be provided by the water purveyor and sizing of the main and associated fire sprinkler systems will be based on those pressures and flows. Hydrant flow data will indicate whether a fire pump is required to provide the necessary pressures and flows to protect all areas of the facility.
  - iii) Backflow prevention devices will be designed and installed per the requirements of the AHJ. A Fire Department Connection (FDC) will be provided. Location of FDC will be at designated water entry area near sprinkler risers or in nearby location approved by the AHJ. FDC type and specifications will be coordinated with requirements of the AHJ.
3. Automatic Sprinkler System
  - i) An automatic fire sprinkler system will be provided and installed in all spaces of the building except those areas where sprinkler omission is permitted by the standard and fire code.
  - ii) Sprinkler main and branch piping sizes will be hydraulically calculated by the Fire Protection Contractor in accordance with NFPA 13.
  - iii) The sprinkler system will be a wet-pipe type system. It will be zoned based on space usage and hazards as defined by the occupancy type. The BRT Station will be primarily Group S-2 and Group B occupancy. Each zone will be provided a control valve assembly with isolation valve, tamper switch, flow switch, and all other required appurtenances. Control assemblies will be located in the water entry area or at locations approved by the Architect and Owner.
  - iv) Quick response type sprinklers will be installed throughout the building. Recessed style sprinklers will be installed in all areas with a finished ceiling. Standard upright style sprinklers will be installed in all areas without a finished ceiling. All sprinklers installed in areas where they may be subject to mechanical damage will be provided with standard protective guards. All sprinkler styles and finishes will be approved by the Owner and Architect prior to installation.
  - v) Sprinkler spacing and locations will be in accordance with the requirements of NFPA 13. Offices, restrooms, and common spaces will be provided with sprinkler protection in accordance with the requirements for Light Hazard occupancies per NFPA 13.A main sprinkler drain will be provided for the sprinkler systems. The main sprinkler

drain will discharge to a floor drain or to the exterior of the building in a location approved by the Owner and AHJ. A single air vent will be provided for each sprinkler zone.

- vi) All piping shall be new and conform to the requirements of NFPA 13. Fire sprinkler system piping material for all wet-pipe systems will be black steel conforming to ASTM A53, A795 or A135. Schedule 40 piping with threaded fittings will be installed for piping 2 inches in diameter and smaller. Schedule 10 piping with grooved fittings will be installed for piping 2 ½ inches and larger. Schedule 5 piping is not permitted. CPVC piping systems may be used in lieu of black steel if CPVC piping system is only installed in locations approved by the manufacturer.
- 4. Commercial Cooking Operations
  - i) No commercial kitchen equipment or Type I hoods are anticipated as part of the design of the facility. Therefore, no automatic fire extinguishing system interlocked with the Type I hood is required.
- 5. Design and Calculation
  - i) The Fire Sprinkler Contractor will be the Engineer of Record for the sprinkler system. The design and engineering of the system will be by the Fire Sprinkler Contractor. Hydraulic calculations and shop drawings will be performed and calculated by the Contractor. Per NFPA 13, the water supply information utilized for the performance of the hydraulic calculations shall be dated within one year of system installation. These shop drawings and calculations are required to be signed and stamped by a Professional Engineer registered in the State of Colorado or signed and certified by a minimum Level IV Senior Engineering Technician of the National Institute for Certification of Engineering Technology (NICET) practicing in the Fire Protection Field. The signed shop drawings will certify that the fire sprinkler system has been hydraulically calculated in compliance with NFPA and governing codes. The signing party is required to be familiar with this type of installation and have previous similar experience.

### **C. Heating, Ventilation, and Air Conditioning**

- 1. Code Compliance
  - i) Applicable Local and State Building, Mechanical, Energy Conservation, Plumbing, Fire and Fuel Gas Codes and Amendments
  - ii) NFPA 70 National Electrical Code
  - iii) ASHRAE Standard 62.1 Ventilation for Acceptable Indoor Air Quality
  - iv) ASHRAE Standard 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings
  - v) Owner Standards and Requirements
- 2. Mechanical Design Information
  - i) Location: Glenwood Springs, CO
  - ii) Climate Zone: 5B
  - iii) Elevation: 5,761 ft above sea level
  - iv) Summer Outside Air Conditions: 95.1 deg F / 58.9 deg F (DB/WB)
  - v) Summer Indoor Conditions: 75 deg F, 60% RH
  - vi) Winter Outside Air Conditions: -0.2 deg F (DB)
  - vii) Winter Indoor Conditions: 72 deg F
  - viii) Ventilation Rate: ASHRAE 62.1
- 3. Mechanical Systems Information

- i) The building will be ventilated and conditioned using various independent HVAC systems. Below are the anticipated systems required:
  - (1) Ground Source Heat Pump
    - (a) A central ground source heat pump (GSHP) system will serve all hydronic heating and cooling equipment in the facility. The GSHP system will include a vertical loop array located below the parking long adjacent to the facility. GSHP equipment will be located in the mechanical room. The GSHP plant equipment will include manifolds, piping, pumps, staged compressor water source heat pump, heat exchanger, and associated accessories, sensors, controls, and valving. The heating water system shall serve air handling units, energy recovery ventilators, terminal boxes and radiant floor snowmelt system.
  - (2) Snowmelt System
    - (a) A radiant slab snowmelt system will be provided to prevent snow and ice accumulation at the North Bay entrances of each fire station. Each snowmelt system will consist of a dedicated condensing wall-mounted boiler that provide hydronic heating to snowmelt loops embedded in the driveway apron concrete.
  - (3) Air Handling Equipment
    - (a) A variable air volume air handling unit with terminal boxes equipped with reheat coils will be provided to serve the common areas, offices, restrooms, and storage rooms. Hydronic heating and cooling at the AHU and terminal boxes via coils fed by the ground source heat pump plant.
  - (4) Ventilation
    - (a) Restrooms and showers throughout the facility will be provided with code required dedicated exhaust fans. Exhaust fans will be switched to turn on/off with the lights. The design and construction shall provide sufficient ventilation to obtain acceptable air quality, determined using the Ventilation Rate Procedure of ANSI/ASHRAE 62.1.
  - (5) Data Equipment Room
    - (a) A computer room air conditioning (CRAC) unit will be provided to serve the data equipment room.
- 4. Testing, Balancing, and Commissioning
  - i) All air systems will be tested and adjusted by a NEBB or TABB certified contractor. HVAC and Hydronic systems will be commissioned to ensure they operate as intended and meet the required conditioning and ventilation setpoints.
- 5. Controls
  - i) HVAC systems will each be provided with their own thermostat located within the conditioned area.
  - ii) A central building management system (BMS) will be provided for the facility. The BMS will control, monitor, and trend space temperatures, setpoints, lighting, and building energy consumption. The system will be a full DDC, internet accessible control system with all new equipment included.
- 6. Remote Access
  - i) Remote access to the BMS will be provided via web-based interface. Remote access will have, at a minimum, the following levels of control capability based on credentials provided during log-in:

- (1) View Only Access: No adjustment capability.
  - (2) Operator Access: Similar level of control to that available via the operator workstation interface. Override default setpoint values
  - (3) Technician Access: Full control, troubleshooting, adjustment, and programming capabilities. Change default setpoint values.
7. Trending
- i) All trending will be shown graphically for a user adjustable time period. Data will be exportable to Microsoft Excel. The following is a list of the minimum points that will be trended for at least 13 months. All other points will be trended for 4 weeks:
    - (1) Outside Air Temperature
    - (2) Alarms – Equipment, Code, Time
    - (3) All Temperature Sensors – Every 5 minute interval, max.
    - (4) Fan/Motor Speed – Every 5 minute interval, max.
8. Graphics
- i) All BMS points will be represented by graphic display on the web-based interface. Graphical floor plans will indicate zone designations as well as space temperature setpoints and space temperature. Background color of zones will be changed as follows:
    - (1) None: Space Temperature is within +/- 3 deg of setpoint
    - (2) Red: Space Temperature is greater than 4 deg above setpoint
    - (3) Blue: Space Temperature is less than 4 deg below setpoint
9. Adjustability
- i) All setpoints and parameters will be independently adjustable and clearly identified as setpoints and not read only values. The occupancy mode (occupied or unoccupied) will be determined through a user-adjustable, graphical, seven-day schedule with a holiday schedule. A single point software command feature will be provided for each of the major systems to reset all overridden variables back to default values. All default values will be automatically indicated adjacent to any value that has been overridden.
10. Alarms
- i) All manufacturer's alarms will be reported to the BMS. Alarms will include:
    - (1) Equipment common alarms
    - (2) Status / Equipment failure
    - (3) Room Temperature > 5deg F +/- from setpoint
    - (4) Fan failure by AFMS
    - (5) Dirty Filter by differential pressure sensor above setpoint
  - ii) User-adjustable dial-out alarming capability will be provided to destination (via text message / email / other). The quantity of unique dial-out alarm codes available to the operator will be equal to at least the quantity of points within the system. The initial dial-out alarm setpoints will be:
    - (1) Generalized equipment failure.
    - (2) Generalized space temperature low limit (for any monitored space)
    - (3) Generalized space temperature high limit (for any monitored space)
11. Energy Management
- i) Demand-limiting programs and optimum start/stop programs will be considered for HVAC systems and included in the controls, as necessary.

#### **D. Plumbing**

1. Code Compliance
  - i) Applicable Local and State Building, Plumbing, Energy Conservation, Fire and Fuel Gas Codes and Amendments
  - ii) Owner Standards and Requirements
2. Plumbing Fixture Flow Rate Information
  - i) The plumbing fixture flow rates will meet EPA Watersense requirements and shall not exceed:
    - (1) Water closets: 1.28 gallons per flush
    - (2) Lavatory faucets: 1.5 gallons per minute
    - (3) Sink faucets: 1.5 gallons per minute
    - (4) Shower heads: 2.0 gallons per minute
3. General Plumbing Fixture and System Information
  - (1) Domestic water piping, faucets, valves, and associated equipment will be lead-free Domestic water piping, faucets, valves, and associated equipment will be lead-free.
  - (2) Isolation valves will be provided on all branch piping. These branches will be provided for each group of plumbing fixtures, each piece of equipment, or area requiring water service.
  - (3) Floor drains will be provided in restrooms.
  - (4) Floor drains will be provided in mechanical rooms and for equipment requiring drainage.
  - (5) Floor drains will have trap seal devices, ASSE 1072 listed.
  - (6) Water hammer arrestors will be provided on all water piping branches serving flush valve fixtures and equipment with solenoid valves such as clothes washers.
  - (7) Freeze-proof wall hydrants will be provided at the exterior of the building space as requested by the Owner.
  - (8) Building unit fixtures will be approved by the Architect and Owner.
  - (9) Public and private toilet room flush valves will be standard lever type activation.
  - (10) All ADA lavatory waste piping and water supplies will be insulated with commercial grade insulation kits.
  - (11) All floor mounted equipment will be mounted on housekeeping pads.
  - ii) The following fixtures are anticipated in the design:
    - (1) Driver Lounge
      - (a) Two-deep-compartment sink – high clearance faucet with wrist-blades, garbage disposal
      - (b) Dishwasher
      - (c) Coffee-maker
      - (d) Refrigerator with ice maker
    - (2) Driver Restroom
      - (a) Water Closet – flush valve, elongated bowl, split seat, ADA
      - (b) Lavatory – standard faucet, wrist blade handles
      - (c) Floor drain
    - (3) Public Restroom
      - (a) Water Closet – flush valve, elongated bowl, split seat, ADA
      - (b) Lavatory – standard faucet, wrist blade handles
      - (c) Floor drain
    - (4) Station Lobby

- (a) Drinking Fountain
- (5) Janitor
  - (a) Mop Sink
  - (b) Floor drain
- 4. Domestic Water
  - i) Building will require a new water service and meter. Backflow prevention devices, as well as pressure regulating devices will be installed as required by the AHJ.
  - ii) Domestic water service will enter the building as a combined fire and domestic service.
  - iii) A centralized hot water heater and circulation system will be installed to provide hot water to fixtures. The water heating system will be fed by the ground source heat pump plant and stored in a hot water storage tank. Tempered water will be delivered to all public hand-washing stations through point-of-use ASSE 1070 mixing valves, this includes hand washing sinks in the kitchen area. One mixing valve may serve multiple side by side fixtures. Where public faucets have a hot and cold supply the temperature downstream of the mixing valve will be set at 110 deg F maximum.
  - iv) Domestic water distribution piping may be PEX piping if it meets code requirements and is only installed in locations approved by the manufacturer.
- 5. Irrigation
  - i) A separate backflow prevention device and main will be provided to supply site irrigation systems. Piping and appurtenances will be sized for 20 gallons per minute demand.
- 6. Sanitary Waste and Vent
  - i) Sanitary waste and vent system will be a conventional system.
  - ii) Throughout the building there will be sanitary risers and vent stacks. The stacks will be located as strategically as possible to minimize the quantity required. Termination of vent stacks will require special attention so the odor does not affect air intake locations.
- 7. Storm Drainage
  - i) Storm drain piping will terminate below grade and discharge to nearest storm water system.
  - ii) Overflow drain piping will terminate above grade at a downspout nozzle. The building will have separate storm and overflow systems. The storm and overflow drain systems will be based on rainfall rates as outlined in governing codes and requirements.
- 8. Natural Gas Piping
  - i) This building will not have a natural gas service. All appliances and equipment will be electric.

## **Phase 6B - Administration Building**

### **A. Project Description**

1. Mechanical, Electrical, Plumbing and Fire Protection design of the new administration building will meet the following criteria. This criteria outlines proposed systems for the administration building and represents a general overview of the design approach. Code compliant systems will be designed and installed to include acceptance and approval from the proper Authorities Having Jurisdiction (AHJ).

### **B. Fire Protection**

1. Code Compliance
  - i) Applicable Local and State Building and Fire Codes and Amendments
  - ii) NFPA 13 Standard for the Installation of Sprinkler Systems
  - iii) Owner Standards and Requirements
2. Incoming Fire Service Main
  - i) The water-based fire suppression system will be served from a new combined fire and domestic water service main supplied by an existing municipal water main. Incoming fire service main will be located in a designated water entry area on the first floor. Connection to the city water main will be by the Civil Contractor. The sprinkler system and Fire Sprinkler Contractor work will begin at the point of connection at the flange inside the building. Hydrant flow tests of the municipal water main will be required and coordinated with the water purveyor to ensure adequate capacity at the site.
  - ii) Reference hydrant flow data will be provided by the water purveyor and sizing of the main and associated fire sprinkler systems will be based on those pressures and flows. Hydrant flow data will indicate whether a fire pump is required to provide the necessary pressures and flows to protect all areas of the facility.
  - iii) Backflow prevention devices will be designed and installed per the requirements of the AHJ. A Fire Department Connection (FDC) will be provided. Location of FDC will be at designated water entry area near sprinkler risers or in nearby location approved by the AHJ. FDC type and specifications will be coordinated with requirements of the AHJ.
3. Automatic Sprinkler System
  - i) An automatic fire sprinkler system will be provided and installed in all spaces of the building except those areas where sprinkler omission is permitted by the standard and fire code.
  - ii) Sprinkler main and branch piping sizes will be hydraulically calculated by the Fire Protection Contractor in accordance with NFPA 13.
  - iii) The sprinkler system will be a wet-pipe type system. It will be zoned based on space usage and hazards as defined by the occupancy type. The administration building will be primarily Group S-2 and Group B occupancy. Each zone will be provided a control valve assembly with isolation valve, tamper switch, flow switch, and all other required appurtenances. Control assemblies will be located in the water entry area or at locations approved by the Architect and Owner.
  - iv) Quick response type sprinklers will be installed throughout the building. Recessed style sprinklers will be installed in all areas with a finished ceiling. Standard upright style sprinklers will be installed in all areas without a finished ceiling. All sprinklers installed in areas where they may be subject to mechanical damage will be provided with standard protective guards. All sprinkler styles and finishes will be approved by the Owner and Architect prior to installation.
  - v) Sprinkler spacing and locations will be in accordance with the requirements of NFPA 13. Offices, restrooms, and common spaces will be provided with sprinkler protection in accordance with the requirements for Light Hazard occupancies per NFPA 13.
  - vi) A main sprinkler drain will be provided for the sprinkler systems. The main sprinkler drain will discharge to a floor drain or to the exterior of the building in a location approved by the Owner and AHJ. A single air vent will be provided for each sprinkler zone.

- vii) All piping shall be new and conform to the requirements of NFPA 13. Fire sprinkler system piping material for all wet-pipe systems will be black steel conforming to ASTM A53, A795 or A135. Schedule 40 piping with threaded fittings will be installed for piping 2 inches in diameter and smaller. Schedule 10 piping with grooved fittings will be installed for piping 2 ½ inches and larger. Schedule 5 piping is not permitted. CPVC piping systems may be used in lieu of black steel if CPVC piping system is only installed in locations approved by the manufacturer.
- 4. Commercial Cooking Operations
  - i) No commercial kitchen equipment or Type I hoods are anticipated as part of the design of the facility. Therefore, no automatic fire extinguishing system interlocked with the Type I hood is required.
- 5. Design and Calculation
  - i) The Fire Sprinkler Contractor will be the Engineer of Record for the sprinkler system. The design and engineering of the system will be by the Fire Sprinkler Contractor. Hydraulic calculations and shop drawings will be performed and calculated by the Contractor. Per NFPA 13, the water supply information utilized for the performance of the hydraulic calculations shall be dated within one year of system installation. These shop drawings and calculations are required to be signed and stamped by a Professional Engineer registered in the State of Colorado or signed and certified by a minimum Level IV Senior Engineering Technician of the National Institute for Certification of Engineering Technology (NICET) practicing in the Fire Protection Field. The signed shop drawings will certify that the fire sprinkler system has been hydraulically calculated in compliance with NFPA and governing codes. The signing party is required to be familiar with this type of installation and have previous similar experience.

### **C. Heating, Ventilation, and Air Conditioning**

- 1. Code Compliance
  - i) Applicable Local and State Building, Mechanical, Energy Conservation, Plumbing, Fire and Fuel Gas Codes and Amendments
  - ii) NFPA 70 National Electrical Code
  - iii) ASHRAE Standard 62.1 Ventilation for Acceptable Indoor Air Quality
  - iv) ASHRAE Standard 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings
  - v) Owner Standards and Requirements
- 2. Mechanical Design Information
  - i) Location: Glenwood Springs, CO
  - ii) Climate Zone: 5B
  - iii) Elevation: 5,761 ft above sea level
  - iv) Summer Outside Air Conditions: 95.1 deg F / 58.9 deg F (DB/WB)
  - v) Summer Indoor Conditions: 75 deg F, 60% RH
  - vi) Winter Outside Air Conditions: -0.2 deg F (DB)
  - vii) Winter Indoor Conditions: 72 deg F
  - viii) Ventilation Rate: ASHRAE 62.1
- 3. Mechanical Systems Information
  - i) The building will be ventilated and conditioned using various independent HVAC systems. Below are the anticipated systems required:
    - (1) Air Handling Equipment

- (a) Packaged rooftop units and terminal reheat boxes will provide heating and cooling to each zone. Each zone will be served by a terminal reheat box located above the ceiling and controlled by a thermostat located in the space. The primary energy source will be natural gas heating and DX cooling.
- (2) Ventilation
  - (a) Restrooms and showers throughout the facility will be provided with code required dedicated exhaust fans. Exhaust fans will be switched to turn on/off with the lights. The design and construction shall provide sufficient ventilation to obtain acceptable air quality, determined using the Ventilation Rate Procedure of ANSI/ASHRAE 62.1.
- (3) Data Equipment Rooms
  - (a) A computer room air conditioning (CRAC) unit will be provided to serve data equipment rooms.
- 4. Testing, Balancing, and Commissioning
  - i) All air systems will be tested and adjusted by a NEBB or TABB certified contractor. HVAC and Hydronic systems will be commissioned to ensure they operate as intended and meet the required conditioning and ventilation setpoints.
- 5. Controls
  - i) HVAC systems will each be provided with their own thermostat located within the conditioned area.
  - ii) A central building management system (BMS) will be provided for the facility. The BMS will control, monitor, and trend space temperatures, setpoints, lighting, and building energy consumption. The system will be a full DDC, internet accessible control system with all new equipment included.
- 6. Remote Access
  - i) Remote access to the BMS will be provided via web-based interface. Remote access will have, at a minimum, the following levels of control capability based on credentials provided during log-in:
    - (1) View Only Access: No adjustment capability.
    - (2) Operator Access: Similar level of control to that available via the operator workstation interface. Override default setpoint values
    - (3) Technician Access: Full control, troubleshooting, adjustment, and programming capabilities. Change default setpoint values.
- 7. Trending
  - i) All trending will be shown graphically for a user adjustable time period. Data will be exportable to Microsoft Excel. The following is a list of the minimum points that will be trended for at least 13 months. All other points will be trended for 4 weeks:
    - (1) Outside Air Temperature
    - (2) Alarms – Equipment, Code, Time
    - (3) All Temperature Sensors – Every 5 minute interval, max.
    - (4) Fan/Motor Speed – Every 5 minute interval, max.
- 8. Graphics
  - i) All BMS points will be represented by graphic display on the web-based interface. Graphical floor plans will indicate zone designations as well as space temperature setpoints and space temperature. Background color of zones will be changed as follows:
    - (1) None: Space Temperature is within +/- 3 deg of setpoint

- (2) Red: Space Temperature is greater than 4 deg above setpoint
  - (3) Blue: Space Temperature is less than 4 deg below setpoint
- 9. Adjustability
  - i) All setpoints and parameters will be independently adjustable and clearly identified as setpoints and not read only values. The occupancy mode (occupied or unoccupied) will be determined through a user-adjustable, graphical, seven-day schedule with a holiday schedule. A single point software command feature will be provided for each of the major systems to reset all overridden variables back to default values. All default values will be automatically indicated adjacent to any value that has been overridden.
- 10. Alarms
  - i) All manufacturer's alarms will be reported to the BMS. Alarms will include:
    - (1) Equipment common alarms
    - (2) Status / Equipment failure
    - (3) Room Temperature > 5deg F +/- from setpoint
    - (4) Fan failure by AFMS
    - (5) Dirty Filter by differential pressure sensor above setpoint
- 11. User-adjustable dial-out alarming capability will be provided to destination (via text message / email / other). The quantity of unique dial-out alarm codes available to the operator will be equal to at least the quantity of points within the system. The initial dial-out alarm setpoints will be:
  - (1) Generalized equipment failure.
  - (2) Generalized space temperature low limit (for any monitored space)
  - (3) Generalized space temperature high limit (for any monitored space)
- 12. Energy Management
- 13. Demand-limiting programs and optimum start/stop programs will be considered for HVAC systems and included in the controls, as necessary.

#### **D. Plumbing**

- 1. Code Compliance
  - i) Applicable Local and State Building, Plumbing, Energy Conservation, Fire and Fuel Gas Codes and Amendments
  - ii) Owner Standards and Requirements
- 2. Plumbing Fixture Flow Rate Information
  - i) The plumbing fixture flow rates will meet EPA Watersense requirements and shall not exceed:
    - (1) Water closets: 1.28 gallons per flush
    - (2) Lavatory faucets: 1.5 gallons per minute
    - (3) Sink faucets: 1.5 gallons per minute
    - (4) Shower heads: 2.0 gallons per minute
  - ii) General Plumbing Fixture and System Information
    - (1) Domestic water piping, faucets, valves, and associated equipment will be lead-free Domestic water piping, faucets, valves, and associated equipment will be lead-free.
    - (2) Isolation valves will be provided on all branch piping. These branches will be provided for each group of plumbing fixtures, each piece of equipment, or area requiring water service.
    - (3) Floor drains will be provided in restrooms.

- (4) Floor drains will be provided in mechanical rooms and for equipment requiring drainage.
- (5) Floor drains will have trap seal devices, ASSE 1072 listed.
- (6) Water hammer arrestors will be provided on all water piping branches serving flush valve fixtures and equipment with solenoid valves such as clothes washers.
- (7) Freeze-proof wall hydrants will be provided at the exterior of the building space as requested by the Owner.
- (8) Building unit fixtures will be approved by the Architect and Owner.
- (9) Public and private toilet room flush valves will be standard lever type activation.
- (10) All ADA lavatory waste piping and water supplies will be insulated with commercial grade insulation kits.
- (11) All floor mounted equipment will be mounted on housekeeping pads.
- iii) The following fixtures are anticipated in the design:
  - (1) Kitchenette
    - (a) Two-deep-compartment sink – high clearance faucet with wrist-blades, garbage disposal
    - (b) Dishwasher
    - (c) Coffee-maker
    - (d) Refrigerator with ice maker
  - (2) Public Restroom
    - (a) Water Closet – flush valve, elongated bowl, split seat, ADA
    - (b) Lavatory – standard faucet, wrist blade handles
    - (c) Floor drain
  - (3) Lobby
    - (a) Drinking Fountain
  - (4) Janitor
    - (a) Mop Sink
    - (b) Floor drain
  - (5) Water Entry
    - (a) Floor drain
- 3. Domestic Water
  - i) Building will require a new water service and meter. Backflow prevention devices, as well as pressure regulating devices will be installed as required by the AHJ.
  - ii) Domestic water service will enter the building as a combined fire and domestic service.
  - iii) A centralized hot water heater and circulation system will be installed to provide hot water to fixtures. The water heating system will employ natural gas as the heating media. Tempered water will be delivered to all public hand-washing stations through point-of-use ASSE 1070 mixing valves, this includes hand washing sinks in the kitchen area. One mixing valve may serve multiple side by side fixtures. Where public faucets have a hot and cold supply the temperature downstream of the mixing valve will be set at 110 deg F maximum.
  - iv) Domestic water distribution piping may be PEX piping if it meets code requirements and is only installed in locations approved by the manufacturer.
- 4. Irrigation

- i) A separate backflow prevention device and main will be provided to supply site irrigation systems. Piping and appurtenances will be sized for 20 gallons per minute demand.
- 5. Sanitary Waste and Vent
  - i) Sanitary waste and vent system will be a conventional system.
  - ii) Throughout the building there will be sanitary risers and vent stacks. The stacks will be located as strategically as possible to minimize the quantity required. Termination of vent stacks will require special attention so the odor does not affect air intake locations.
- 6. Storm Drainage
  - i) Storm drain piping will terminate below grade and discharge to nearest storm water system.
  - ii) Overflow drain piping will terminate above grade at a downspout nozzle. The building will have separate storm and overflow systems. The storm and overflow drain systems will be based on rainfall rates as outlined in governing codes and requirements.
- 7. Natural Gas Piping
  - i) This building will not have a natural gas service. All appliances and equipment will be electric.

## **Phase 8 - Storage Building**

### **A. Project Description**

- 1. Mechanical, Electrical, Plumbing and Fire Protection design of the new administration building will meet the following criteria. This criteria outlines proposed systems for the administration building and represents a general overview of the design approach. Code compliant systems will be designed and installed to include acceptance and approval from the proper Authorities Having Jurisdiction (AHJ).

### **B. Fire Protection**

- 1. No fire protection equipment or sprinkler system are anticipated as part of the design of the facility.

### **C. Heating, Ventilation, and Air Conditioning**

- 1. Code Compliance
  - i) Applicable Local and State Building, Mechanical, Energy Conservation, Plumbing, Fire and Fuel Gas Codes and Amendments
  - ii) NFPA 70 National Electrical Code
  - iii) ASHRAE Standard 62.1 Ventilation for Acceptable Indoor Air Quality
  - iv) ASHRAE Standard 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings
  - v) Owner Standards and Requirements
- 2. Mechanical Design Information
  - i) Location: Glenwood Springs, CO
  - ii) Climate Zone: 5B
  - iii) Elevation: 5,761 ft above sea level
  - iv) Summer Outside Air Conditions: 95.1 deg F / 58.9 deg F (DB/WB)
  - v) Summer Indoor Conditions: 75 deg F, 60% RH
  - vi) Winter Outside Air Conditions: -0.2 deg F (DB)
  - vii) Winter Indoor Conditions: 72 deg F

- viii) Ventilation Rate: ASHRAE 62.1
3. Mechanical Systems Information
- i) The building will be ventilated and conditioned using various independent HVAC systems. Below are the anticipated systems required:
  - ii) Unit Heaters
    - (1) Electric unit heaters will provide heating to the maintenance building. The unit heaters will be controlled by a thermostat located in the space. The primary energy source will be electric heating.
  - iii) Ventilation
    - (1) Facility will be provided with code required dedicated exhaust fans. Exhaust fans will be interlocked with CO sensors to meet code required rates for vehicle maintenance bays. The design and construction shall provide sufficient ventilation to obtain acceptable air quality, determined using the Ventilation Rate Procedure of ANSI/ASHRAE 62.1.
4. Testing, Balancing, and Commissioning
- i) All air systems will be tested and adjusted by a NEBB or TABB certified contractor. HVAC systems will be commissioned to ensure they operate as intended and meet the required conditioning and ventilation setpoints.
5. Controls
- i) The maintenance building electric unit heaters will be provided with thermostat and timing controls.
  - ii) Gas monitoring sensors will control the exhaust fan system as well as a manual override. Sensors will be dual element and will detect air quality to maintain permissible pollutant/contaminant ppm levels. Sensor coverage is approximately 5,000 sqft.

#### **D. Plumbing**

1. Code Compliance
- i) Applicable Local and State Building, Plumbing, Energy Conservation, Fire and Fuel Gas Codes and Amendments
  - ii) Owner Standards and Requirements
2. General Plumbing Fixture and System Information
- i) Trench drains will be provided in the vehicle maintenance bays.
  - ii) Building unit fixtures will be approved by the Architect and Owner.
3. Domestic Water
- i) No domestic water system is anticipated as part of the design of the facility.
4. Irrigation
- i) No irrigation water system is anticipated as part of the design of the facility.
5. Sanitary Waste and Vent
- i) Sanitary waste and vent system will be a conventional system.
6. Storm Drainage
- i) Storm drain piping will terminate below grade and discharge to nearest storm water system.
  - ii) Overflow drain piping will terminate above grade at a downspout nozzle. The building will have a primary storm systems. The storm drain system will be based on rainfall rates as outlined in governing codes and requirements.
7. Natural Gas Piping

- i) This building will not have a natural gas service. All appliances and equipment will be electric.

## **Electrical Design**

### **A. Project Description**

1. The electrical narrative identifies the systems criteria to be used in the development of the construction cost estimates. The use is not intended to cover all systems in their entirety, but to be used as a guide and basis for which the electrical systems will be designed. See other discipline narratives for additional information about project scope and equipment. All work shall be executed in accordance with local and state codes, and latest editions of IBC, NEC, NFPA and ADA.

## **Phase 6A - Transit Station**

### **A. Normal Power**

1. The size of the service, based on the building size of 3,173 square feet, will be 400 amps at 120/208 volts.
  - i) Rough-in for four passenger vehicle charging stations shall be provided.
2. Two bus fast-charging stations will be located adjacent to and west of the Transit Station. Each bus charging station will have a separate utility service meter. Each charging station service size will be 800 amps at 277/480 volts. The distribution switchboards will be located next to the charging stations and will be NEMA 3R rated. Space for a third bus fast-charging station will be included.

### **B. Emergency Power**

1. Emergency power for lighting will utilize battery backup.
2. A 60-amp 4-pole transfer switch will be provided for emergency power. A feeder from the Phase 6B admin building generator set shall be provided. Control wiring between the Transit Center transfer switch and Admin generator shall be provided.

### **C. Uninterruptible Power Supply**

1. Uninterruptible Power Supply (UPS) system(s) shall be provided for equipment located in the MDF and IDF rooms. UPS shall be rack mountable in a standard 19" 4-post server rack.
2. Battery system shall be sized for a minimum of fifteen minutes of backup supply.

### **D. Power Distribution**

1. Separate panelboards for lighting, HVAC, and receptacle power will be required.
  - i) All panelboards/switchboards will be located in the electrical room.
  - ii) Panelboards shall have minimum 30% spare capacity and will have copper bussing.
  - iii) TVSS will be provided for all main panels and switchboards.
  - iv) Surge protection shall be provided on main panelboards.
  - v) Arc flash labeling for distribution equipment shall be provided.
  - vi) Lamecoid labeling will be required for panels and equipment with labeling information per NEC.
  - vii) Arc Flash analysis shall be provided by the contractor.
  - viii) Provide Owner submetering as required by code. The meters shall be digital and capable of monitoring 3-phases independently and overall, for maximum, peak, average, and RMS of the following: amperes, voltages, power factor, volt-amps, wattage and kVar. The system shall be capable of recording these values for a period of not less than 30 days continuously and shall also generate a legible report.

The metering system shall be networked together with a Main PC and shall be located in the Owners designated area. Energy usage shall be reported on a graphical interface as required by code.

2. Commissioning for generator, transfer switches, switchboards, grounding systems, connections, and lighting controls shall be provided.
3. Provide local disconnect switches for mechanical equipment. Mechanical equipment shall be coordinated to meet the available fault current.
4. All interior building conductors shall be installed in conduit and shall be of the following types: electrical metallic tubing (EMT), intermediate metal conduit (IMC), or galvanized rigid conduit (GRC), unless otherwise noted.
5. Provide compression fittings on EMT conduits. Flexible steel conduit shall be utilized for equipment connections in dry areas and liquid-tight conduit shall be utilized in areas subject to moisture unless otherwise noted.
6. Exterior conduit installed underground shall be schedule 40 PVC with PVC Coated GRC elbows.
7. Armored (AC) and Metal Clad (MC), cable shall be acceptable for use in this facility where concealed within wall and ceiling cavities. All homerun circuitry to panelboards shall be installed in conduit.

#### **E. Devices and Outlets**

1. Building standard general-purpose receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
2. Floor outlets are required in conference rooms and open space areas.
3. Ground Fault Circuit Interrupter (GFCI) receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R, and isolated ground, computer grade receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
4. Provide compression-type two-hole connections on all panel board, transformer, ground bus, switchboard, and switchgear conductor connections. Use hydraulic compression tools to provide the correct circumferential pressure for compression connectors. Use tools and dies recommended by the manufacturer of the connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the conductor.
5. Private offices shall be provided with two (2) wall mounted fourplex receptacles or four (4) duplex outlets as a minimum. Where printers may be identified to be installed in offices, provide a dedicated duplex at the printer location and branch circuiting shall accommodate two (2) printers per 20A branch circuit.
6. MDF Room shall have one standard duplex receptacle on each of the "short" walls and two standard duplex receptacles on each of the "long" walls. In addition, provide dedicated 20A branch circuits wherever necessary for the special telecom equipment in this room.
7. MDF room to have one (1) fourplex receptacle supplied from a dedicated circuit mounted at 7'-0" above finished floor and one (1) standard duplex receptacle shall be provided on each wall of IDF Rooms. One of the dedicated fourplex receptacles shall be mounted on the plywood backboard at 7'-0" above finished floor. The standard duplex receptacles shall be mounted at 18" above finished floor.
8. Provide a 4" x 1/4" x 12" (minimum length) grounding bar in the MDF room. These ground plates shall be interconnected by a #2 AWG copper conductor and shall connect to the main service grounding electrode system.

## **F. Interior Lighting**

1. All lighting shall be LED with a minimum CRI of 80 and a color temperature of 35k.
2. The IDF Room shall be provided with strip type luminaires with reflectors having 10% up-light and arranged perpendicular to the Telecom equipment to equally illuminate front and back of equipment racks.
3. Public spaces and lobby areas shall have decorative lighting with downlights and accent lighting.
4. Enclosed offices, huddle/small conference rooms, copy/work rooms and break rooms and similar spaces shall be provided with architectural type recessed 2'x2' or 2'x4' luminaires, which have a flat center panel, have an approximate 3500 lumen package, are dimmable to 1%.
5. Common Areas: Corridors, lobbies, and other common spaces shall be illuminated, depending on the function, with combinations of down lights, decorative wall sconces, decorative pendant hung fixtures and recessed flat panel type luminaires.
6. Provide undercabinet type task luminaires under all upper cabinets in all office, break room and work/copy room casework, millwork, etc. Undercabinet luminaires shall be locally separately switched from overhead lighting.
7. Toilet rooms shall be illuminated with wall mounted luminaires located above the urinals and water closets with luminaires located above mirrors/lavatory vanities, as well as down lights spaced 8 feet to 10 feet on center down the center of the room. At a minimum, one (1) fixture located near the door shall be unswitched, and shall be fed by an emergency source in smaller toilet rooms. In larger toilet rooms (over three toilets), there shall be additional downlights fed by an emergency source to illuminate in stalls and pathway to entry/exit.
8. Utility, mechanical, and electrical equipment rooms, and janitor's closets shall be illuminated by 4' strip luminaires with industrial reflectors having 10% minimum up-light and with wire guards.

## **G. Exterior Lighting**

1. All lighting shall be LED with a CRI of 80 and color temperature of 35k.
2. Exterior parking lot, roadway, and pedestrian walkway lighting shall primarily consist of pole mounted LED "Dark Sky" compliant, full cutoff luminaires.
3. Lighting at building entrances shall be provided with exterior decorative wall sconces.
4. Parking lots, roadways, and pedestrian walkways shall be illuminated to a maintained average of 2 foot candles at pavement level, with an average to minimum ratio not exceeding 4:1. Pole mounted luminaires shall be located on traffic islands for protection from damage.
5. In areas where there are no traffic islands or where the islands are too small to provide protection, the poles shall be mounted on 36" high reinforced concrete pole bases. All pole bases are to extend 8'-0" minimum below the finished grade and shall be reviewed for proper design and reinforcement by a licensed practicing professional structural engineer.
6. Luminaires outdoors shall be shielded appropriately to ensure that light from the luminaires does not trespass onto other properties or cause a problem or hazard condition to drivers elsewhere in the area including public access ways.
7. Provide exterior lighting adequate for inspection and repair around utility transformers and generators and provide with battery or inverter back-up and provide these luminaires on separate switches from any other lighting on the circuit.

8. Provisions for site cameras and site wi-fi systems shall be integrated in to site poles as required.

#### **H. Lighting Control**

1. Lighting controls will meet the latest version of the International Energy Conservation Code.
2. Offices will have automatic controls to turn lights off with manual on (vacancy sensor). Storage, restrooms, and other similar areas will have automatic on and off (occupancy sensor). Sensors will be dual technology and will be wall or ceiling mounted to optimize performance
3. Areas with skylights or windows will have dimmable daylighting controls for 15 feet within the daylight area
4. Building entrances will have security dusk to dawn lighting controlled by a photocell and motion sensor. Remaining exterior lighting will be capable of being reduced by at least 30%.
5. An automated lighting control system will be provided for the facility exterior lighting. The interior lighting will be controlled locally. All controls will meet the current requirements of the IECC, and the local jurisdictional.

#### **I. Fire Alarm**

1. Provide an Analog Addressable Fire Alarm System that shall meet the requirements of the codes and NFPA and is suitable for the type and occupancy as defined by the building codes.
2. Fire alarm conductors shall be run in conduit and boxes shall have red covers.
3. Minimum smoke detection will be the basis of design. The system shall utilize photo-electric smoke detection including duct detection, rate-of-rise/fixed temperature heat detection, single-action manual pull-stations, horns, strobes, control modules, monitor modules and relays as necessary to form a complete detection and notification system for the new building.
4. The new work shall be integrated and compatible with the existing campus system. New Fire Alarm Control Panels shall be located at the building served. In addition to panel locations coordinated with Glenwood Springs Fire Department, provide Master Control at OP121 Dispatch, networked to monitor all new work.
5. Provide Brothers or Kroy labelling of all fire alarm devices such that they are visible and readable from the normal viewing positions. The labels shall indicate the network the devices are located on and the associated address of that device.
6. Duct detectors which are inaccessible from the floor shall have a remote indicator light and keyed test switch labeled to match duct detector.
7. The new work shall be integrated and compatible with the existing campus system. New Fire Alarm Control Panels shall be located at the building served. In addition to panel locations coordinated with Glenwood Springs Fire Department, provide Master Control at OP121 Dispatch, networked to monitor all new work.

### **Phase 6B - Administration Building**

#### **A. Normal Power**

1. The size of the service based on the building size of 31,066 square feet will be 600 amps at 480/277 volts.
  - i) Rough-in for four passenger vehicles will be provided.

#### **B. Emergency Power**

1. An emergency generator to accommodate the load of the electrical service in its entirety with an additional 20% spare capacity, including any derating of capacity associated with the elevation of the site. The generator shall be provided in an enclosure exterior to the building. The generator shall provide 277/480V, 3-phase, 4-wire output power to the building distribution system via automatic transfer switches.
2. The generator shall utilize an integral radiator unit. Provide engine start batteries and chargers. Provide oil jacket heaters and battery warmers as necessary for cold starting.
3. Provide system condition and alarm reporting for each generator at a remote status and alarm panel located at OP121 Dispatch, Bus Storage and Operations Building. Provide a remote paging feature to the Owner's maintenance and/or other responding personnel. Provide alarm of "low fuel" at eight (8) hours full load run time remaining.
4. Provide a sub-base mounted fuel tank for thirty-six (36) hours of full load operation and provisions for emergency fuel delivery. Emergency fuel delivery shall be made available and provided to ensure the tank may be completely replenished before the tank fuel is run dry. The engine shall operate on no. 1 or no. 2 diesel.
5. Provide a generator tap box, and a resistive load bank rated at a minimum of 40% of the generator full load kW rating with the ability to step the load onto the system while running to maintain efficient generator loading.
6. Provide two transfer switches, one each for emergency and life safety power. The transfer switches and emergency distribution and branch panel boards shall all be required to be located within electrical room.

#### **C. Uninterruptable Power Supply**

1. Uninterruptible Power Supply (UPS) system(s) shall be provided for equipment located in the MDF and IDF rooms. UPS shall be rack mountable in a standard 19" 4-post server rack.
2. Where the number of equipment loads being served are under 5 items, the items shall be served by local UPS units. Where the number of loads exceed 5, the UPS shall be a centralized unit with a distribution panel board on the output to serve the loads from a common location. Refer to the panel board requirements<sup>14</sup> above for additional information.
3. Battery system shall be sized for a minimum of fifteen minutes of backup supply.

#### **D. Power Distribution**

1. Separate panelboards for lighting, HVAC, and receptacle power will be required.
  - i) All panelboards/switchboards will be located in the electrical room.
  - ii) Panelboards shall have minimum 30% spare capacity and will have copper bussing.
  - iii) TVSS will be provided for all main panels and switchboards.
  - iv) Surge protection shall be provided on main panelboards.
  - v) Arc flash labeling for distribution equipment shall be provided.
  - vi) Lamecoid labeling will be required for panels and equipment with labeling information per NEC.
  - vii) Arc Flash analysis shall be provided by the contractor.
  - viii) Provide Owner submetering as required by code. The meters shall be digital and capable of monitoring 3-phases independently and overall, for maximum, peak, average, and RMS of the following: amperes, voltages, power factor, volt-amps, wattage and kVar. The system shall be capable of recording these values for a period of not less than 30 days continuously and shall also generate a legible report. The metering system shall be networked together with a Main PC and shall be

- located in the Owners designated area. Energy usage shall be reported on a graphical interface as required by code.
2. Commissioning for generator, transfer switches, switchboards, grounding systems, connections, and lighting controls shall be provided.
  3. Provide local disconnect switches for mechanical equipment. Mechanical equipment shall be coordinated to meet the available fault current.
  4. All interior building conductors shall be installed in conduit and shall be of the following types: electrical metallic tubing (EMT), intermediate metal conduit (IMC), or galvanized rigid conduit (GRC), unless otherwise noted.
  5. Provide compression fittings on EMT conduits. Flexible steel conduit shall be utilized for equipment connections in dry areas and liquid-tight conduit shall be utilized in areas subject to moisture unless otherwise noted.
  6. Exterior conduit installed underground shall be schedule 40 PVC with PVC Coated GRC elbows.
  7. Armored (AC) and Metal Clad (MC), cable shall be acceptable for use in this facility where concealed within wall and ceiling cavities. All homerun circuitry to panelboards shall be installed in conduit.

#### **E. Devices and Outlets**

1. Building standard general-purpose receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
2. Floor outlets are required in conference rooms and open space areas. Floor outlet shall be fire rated poke thru's above grade and weatherproof boxes at grade.
3. Ground Fault Circuit Interrupter (GFCI) receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R, and isolated ground, computer grade receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
4. Provide compression-type two-hole connections on all panel board, transformer, ground bus, switchboard, and switchgear conductor connections. Use hydraulic compression tools to provide the correct circumferential pressure for compression connectors. Use tools and dies recommended by the manufacturer of the connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the conductor.
5. Private offices shall be provided with two (2) wall mounted fourplex receptacles or four (4) duplex outlets as a minimum. Where printers may be identified to be installed in offices, provide a dedicated duplex at the printer location and branch circuiting shall accommodate two (2) printers per 20A branch circuit.
6. Furniture System Workstations: Branch circuit density as a minimum shall accommodate one (1) 20A circuit per two workstations and shall match the configuration of the systems furniture wiring harness and meet the requirements of the NEC for powered furniture systems.
7. Open office areas shall be provided with a minimum of four (4) duplexes (20A branch circuit). This power is to be placed on the walls of these areas and is in addition to the power requirements for the systems furniture in these areas.
8. The IDF Room requires dedicated 20A branch circuits for the telephone, data, and security systems. Provide four (4) fourplexes, mounted on unistrut above equipment racks, one (1) above each equipment rack and each connected to a dedicated 20A branch circuit.

9. One (1) fourplex receptacle supplied from a dedicated circuit mounted at 7'-0" above finished floor and one (1) standard duplex receptacle shall be provided on each wall of IDF Rooms. One of the dedicated fourplex receptacles shall be mounted on the plywood backboard at 7'-0" above finished floor. The standard duplex receptacles shall be mounted at 18" above finished floor.
10. MDF Room shall have one standard duplex receptacle on each of the "short" walls and two standard duplex receptacles on each of the "long" walls. In addition, provide dedicated 20A branch circuits wherever necessary for the special telecom equipment in this room.
11. Provide a 4" x 1/4" x 12" (minimum length) grounding bar in the MDF room and in all IDF telecom closets. These ground plates shall be interconnected by a #2 AWG copper conductor and shall connect to the main service grounding electrode system.

#### **F. Interior Lighting**

1. All lighting shall be LED with a minimum CRI of 80 and a color temperature of 35k.
2. IDF Rooms and MDF Room shall be provided with strip type luminaires with reflectors having 10% up-light and arranged perpendicular to the Telecom equipment to equally illuminate front and back of equipment racks.
3. Public spaces and lobby areas shall have decorative lighting with downlights and accent lighting.
4. Enclosed offices, huddle/small conference rooms, copy/work rooms and break rooms and similar spaces shall be provided with architectural type recessed 2'x2' or 2'x4' luminaires, which have a flat center panel, have an approximate 3500 lumen package, are dimmable to 1%.
5. Open office space lighting shall be provided by cable or pendant suspended luminaires, which produce 90% indirect and 10% direct light.
6. Common Areas: Corridors, lobbies, and other common spaces shall be illuminated, depending on the function, with combinations of down lights, decorative wall sconces, decorative pendant hung fixtures and recessed flat panel type luminaires.
7. Provide undercabinet type task luminaires under all upper cabinets in all office, break room and work/copy room casework, millwork, etc. Undercabinet luminaires shall be locally separately switched from overhead lighting.
8. Toilet rooms shall be illuminated with wall mounted luminaires located above the urinals and water closets with luminaires located above mirrors/lavatory vanities, as well as down lights spaced 8 feet to 10 feet on center down the center of the room. At a minimum, one (1) fixture located near the door shall be unswitched, and shall be fed by an emergency source in smaller toilet rooms. In larger toilet rooms (over three toilets), there shall be additional downlights fed by an emergency source to illuminate in stalls and pathway to entry/exit.
9. Utility, mechanical, and electrical equipment rooms, and janitor's closets shall be illuminated by 4' strip luminaires with industrial reflectors having 10% minimum up-light and with wire guards.

#### **G. Exterior Lighting**

1. All lighting shall be LED.
2. Exterior parking lot, roadway, and pedestrian walkway lighting shall primarily consist of pole mounted LED "Dark Sky" compliant, full cutoff luminaires.
3. Lighting at building entrances shall be provided with exterior decorative wall sconces.

4. Parking lots, roadways, and pedestrian walkways shall be illuminated to a maintained average of 2 foot candles at pavement level, with an average to minimum ratio not exceeding 4:1. Pole mounted luminaires shall be located on traffic islands for protection from damage.
5. In areas where there are no traffic islands or where the islands are too small to provide protection, the poles shall be mounted on 36" high reinforced concrete pole bases. All pole bases are to extend 8'-0" minimum below the finished grade and shall be reviewed for proper design and reinforcement by a licensed practicing professional structural engineer.
6. Luminaires outdoors shall be shielded appropriately to ensure that light from the luminaires does not trespass onto other properties or cause a problem or hazard condition to drivers elsewhere in the area including public access ways.
7. Provide exterior lighting adequate for inspection and repair around utility transformers and generators and provide with battery or inverter back-up and provide these luminaires on separate switches from any other lighting on the circuit.
8. Provisions for site cameras and site wi-fi systems shall be integrated in to site poles as required.

#### **H. Lighting Control**

1. Lighting controls will meet the latest version of the International Energy Conservation Code.
2. Offices will have automatic controls to turn lights off with manual on (vacancy sensor). Storage, restrooms, and other similar areas will have automatic on and off (occupancy sensor). Sensors will be dual technology and will be wall or ceiling mounted to optimize performance
3. Areas with skylights or windows will have dimmable daylighting controls for 15 feet within the daylight area
4. Building entrances will have security dusk to dawn lighting controlled by a photocell and motion sensor. Remaining exterior lighting will be capable of being reduced by at least 30%.
5. An automated lighting control system will be provided for the facility exterior lighting. The interior lighting will be controlled locally. All controls will meet the current requirements of the IECC, and the local jurisdictional.

#### **I. Fire Alarm**

1. Provide an Analog Addressable Fire Alarm System that shall meet the requirements of the codes and NFPA and is suitable for the type and occupancy as defined by the building codes.
2. Fire alarm conductors shall be run in conduit and boxes shall have red covers.
3. Minimum smoke detection will be the basis of design. The system shall utilize photo-electric smoke detection including duct detection, rate-of-rise/fixed temperature heat detection, single-action manual pull-stations, horns, strobes, control modules, monitor modules and relays as necessary to form a complete detection and notification system for the new building.
4. The new work shall be integrated and compatible with the existing campus system. New Fire Alarm Control Panels shall be located at the building served. In addition to panel locations coordinated with Glenwood Springs Fire Department, provide Master Control at OP121 Dispatch, networked to monitor all new work.

5. Provide Brothers or Kroy labelling of all fire alarm devices such that they are visible and readable from the normal viewing positions. The labels shall indicate the network the devices are located on and the associated address of that device.
6. Duct detectors which are inaccessible from the floor shall have a remote indicator light and keyed test switch labeled to match duct detector.
7. The new work shall be integrated and compatible with the existing campus system. New Fire Alarm Control Panels shall be located at the building served. In addition to panel locations coordinated with Glenwood Springs Fire Department, provide Master Control at OP121 Dispatch, networked to monitor all new work.

## **Phase 8 - Storage Building**

### **A. Normal Power**

1. The size of the service, shall be 100 amps at 120/208 volts. The building shall be fed from the existing GMF building.

### **B. Power Distribution**

1. All panelboards/switchboards will be located in the electrical room.
2. Panelboards shall have minimum 30% spare capacity and will have copper bussing.
3. TVSS will be provided for all main panels and switchboards.
4. Surge protection shall be provided on main panelboards.
5. Arc flash labeling for distribution equipment shall be provided.
6. Lamecoid labeling will be required for panels and equipment with labeling information per NEC.
7. Arc Flash analysis shall be provided by the contractor.
8. Provide Owner submetering as required by code. The meters shall be digital and capable of monitoring 3-phases independently and overall, for maximum, peak, average, and RMS of the following: amperes, voltages, power factor, volt-amps, wattage and kVar. The system shall be capable of recording these values for a period of not less than 30 days continuously and shall also generate a legible report. The metering system shall be networked together with a Main PC and shall be located in the Owners designated area. Energy usage shall be reported on a graphical interface as required by code.
9. Provide local disconnect switches for mechanical equipment. Mechanical equipment shall be coordinated to meet the available fault current.
10. All interior building conductors shall be installed in conduit and shall be of the following types: electrical metallic tubing (EMT), intermediate metal conduit (IMC), or galvanized rigid conduit (GRC), unless otherwise noted.
11. Provide compression fittings on EMT conduits. Flexible steel conduit shall be utilized for equipment connections in dry areas and liquid-tight conduit shall be utilized in areas subject to moisture unless otherwise noted.
12. Exterior conduit installed underground shall be schedule 40 PVC with PVC Coated GRC elbows.
13. Armored (AC) and Metal Clad (MC), cable shall be acceptable for use in this facility where concealed within wall and ceiling cavities. All homerun circuitry to panelboards shall be installed in conduit.
14. Devices and Outlets
15. Building standard general-purpose receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
16. Floor outlets are required in conference rooms and open space areas.

17. Ground Fault Circuit Interrupter (GFCI) receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R, and isolated ground, computer grade receptacles shall be 20 Amp, 120 VAC duplex, specification grade NEMA 5-20R.
18. Provide compression-type two-hole connections on all panel board, transformer, ground bus, switchboard, and switchgear conductor connections. Use hydraulic compression tools to provide the correct circumferential pressure for compression connectors. Use tools and dies recommended by the manufacturer of the connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the conductor.

#### **C. Interior Lighting**

1. All lighting shall be LED with a minimum CRI of 80 and a color temperature of 35k.
2. Common Areas: Corridors, lobbies, and other common spaces shall be illuminated, depending on the function, with combinations of down lights, decorative wall sconces, decorative pendant hung fixtures and recessed flat panel type luminaires.
3. Toilet rooms shall be illuminated with wall mounted luminaires located above the urinals and water closets with luminaires located above mirrors/lavatory vanities, as well as down lights spaced 8 feet to 10 feet on center down the center of the room. At a minimum, one (1) fixture located near the door shall be unswitched, and shall be fed by an emergency source in smaller toilet rooms. In larger toilet rooms (over three toilets), there shall be additional downlights fed by an emergency source to illuminate in stalls and pathway to entry/exit.
4. Utility, mechanical, and electrical equipment rooms, and janitor's closets shall be illuminated by 4' strip luminaires with industrial reflectors having 10% minimum up-light and with wire guards.

#### **D. Exterior Lighting**

1. All lighting shall be LED with a CRI of 80 and color temperature of 35k.
2. Exterior parking lot, roadway, and pedestrian walkway lighting shall primarily consist of pole mounted LED "Dark Sky" compliant, full cutoff luminaires.
3. Lighting at building entrances shall be provided with exterior decorative wall sconces.
4. Parking lots, roadways, and pedestrian walkways shall be illuminated to a maintained average of 2 foot candles at pavement level, with an average to minimum ratio not exceeding 4:1. Pole mounted luminaires shall be located on traffic islands for protection from damage.
5. Luminaires outdoors shall be shielded appropriately to ensure that light from the luminaires does not trespass onto other properties or cause a problem or hazard condition to drivers elsewhere in the area including public access ways.
6. Provisions for site cameras and site wi-fi systems shall be integrated in to site poles as required.

#### **E. Lighting Control**

1. Lighting controls will meet the latest version of the International Energy Conservation Code.
2. Building entrances will have security dusk to dawn lighting controlled by a photocell and motion sensor. Remaining exterior lighting will be capable of being reduced by at least 30%.
3. An automated lighting control system will be provided for the facility exterior lighting. The interior lighting will be controlled locally. All controls will meet the current requirements of the IECC, and the local jurisdictional.

# **Telecommunications Design**

## **Phase 6A - Transit Station**

### **A. Project Description**

1. The telecommunications system at the RFTA Phase 6B Administrative Building aims to provide reliable, efficient, and secure infrastructure. Services and systems supported by the communications network include voice, data, CATV, fire alarm, electronic security, building automation, and Owner systems.
2. Telecommunications systems shall comply the RFTA Phase 6 Program of Requirements (POR) dated January 16, 2023, as well as the National Electrical Code (NEC), EIA/TIA standards, and BICSI.

### **B. Telecommunications**

1. Outside Plant:
  - i) The new Transit Station will be served from existing RFTA Glenwood campus main point-of-presence and MDF, Data Equipment Room FM531.
  - ii) At a minimum, a concrete-encased ductbank with four (4) 4" conduits shall be provided between the nearest serving communications vault and the communications entrance facility inside the Transit Station.
  - iii) New vaults shall be provided as required.
  - iv) The incoming cabling shall consist of one (1) 12-strand and one (1) 6-strand OS2 singlemode armored optical fiber for communications and fire alarm, respectively.
  - v) The fiber optic cabling shall be terminated to a rack-mount fiber optic enclosure.
2. Equipment Facilities:
  - i) The Transit Station shall have a single Telecom Room (TR) serving as the primary telecom room and communications entrance facility (EF).
  - ii) This TR shall house telecommunications distributions equipment supporting data, voice, wireless access, and structured cabling distribution for horizontal cabling.
3. Distribution Frames:
  - i) The TR shall house an Intermediate Distribution Frame (IDF).
  - ii) Distribution frames consist of:
    - (1) Free-standing floor-mounted 4-post racks,
    - (2) Rack-mounted RJ45 patch panels (Category 6A minimum compliance).
    - (3) Rack-mounted fiber optic patch panels.
    - (4) Wall mount copper backbone termination panels.
    - (5) Cross-connect cabling and patch cables.
    - (6) Cable management.
    - (7) Cable runway.
4. Telecommunications Spaces:
  - i) All new Telecommunications Spaces shall be built out in adherence to current BICSI best practices with the following considerations:
    - (1) Architectural
      - (a) Minimum interior dimensions: TR/IDF: 10'-0" x 10'-0"
      - (b) Floors shall be sealed concrete.
      - (c) Open to structure with no dropped ceiling.
      - (d) Finished walls along all four sides that extend to building structure.
      - (e) Walls shall be lined with AC-grade void-free ¾" plywood painted on all sides with two (2) coats of fire-retardant white paint.

- (f) Doors to be a minimum of 36" wide x 84" tall and swing out, away from the room, where permitted by code.
- (g) Entrance to the room shall not be through an electrical room, mechanical room, or a non-circulation space (i.e., storage or restroom).
- (2) Electrical/Lighting:
  - (a) Per Rack: One (1) dedicated, non-switched 30A 120V circuit on a twist lock receptacle (L6-30R) and one (1) dedicated, non-switched 20A 120V circuit on a quad receptacle (5-20R) mounted to the cable runway to the rear of the rack.
  - (b) 20A 120V duplex convenience outlets placed at 6' intervals on perimeter walls at standard outlet height, with at least one (1) per wall.
  - (c) Lighting with a minimum of 50 foot-candles (538 lux measured at 3 feet (1 meter) from the floor in front of a behind the equipment racks. Provide one light fixture with emergency power or battery pack.
  - (d) An electrical panel shall be provided inside each room and shall be dedicated to serving only the equipment in the telecom room.
- (3) Mechanical/Plumbing:
  - (a) A dedicated fan coil unit (FCU) that maintains the temperature between 64° and 75° and humidity between 30% and 50%. FCU shall be located outside the telecom room such that only serving supply/return ductwork is in the space.
  - (b) VAV's may be used in TR/IDFs as heat loads dictate and may be located in the telecommunications space.
  - (c) Ductwork or piping (e.g., water, waste, steam) shall not be routed through, above, or in the walls enclosing the telecommunications space.
- 5. Grounding and Bonding:
  - i) All telecommunications equipment will be bonded to the electrical system ground per TIA-607-D standard.
  - ii) The primary bonding busbar (PBB) shall be located in the telecom room.
    - (1) The PBB shall be connected to the main grounding electrode in the main electrical panel and to the cable runway, equipment rack bonding busbar (RBB), and building steel within the telecom room.
- 6. Horizontal Infrastructure and Cabling:
  - i) Horizontal cabling shall be installed in cable tray or J-hooks above accessible ceilings to the conduit termination at the outlet.
  - ii) Cabling shall be installed in conduit through inaccessible locations, such as gypsum board ceilings and walls.
  - iii) 4" conduit sleeves shall be provided from the TR to above accessible ceilings to allow cabling installation.
  - iv) Re-enterable fire-rated cable pathways shall be provided at fire-rated partitions.
  - v) Two (2) 2" conduits, each with a weatherhead, shall be provided as a pathway from the IDF to the roof for radio antennae or satellite connectivity.
  - vi) Telecom outlets shall consist of a 4-11/16" x 4-11/16" x 2-1/8" metal outlet box with a 1-gang mud-ring cover plate.
  - vii) 1" EMT shall be routed from each outlet to the nearest accessible ceiling space.
  - viii) Faceplates shall be thermoplastic with label windows at the top and bottom with four (4) ports to accept keystone-style jacks.

- ix) Wall phones shall have a 1-port stainless steel wall plate with mounting studs.
- x) All horizontal cabling shall be four-pair Category 6A UTP, plenum rated.
- xi) Connectors shall be IDC-type Category 6A rated RJ45/8P8C, non-keyed. All terminations shall be T568B.

(1) Basis of Design:

- (a) Belden
- (b) Commscope
- (c) Leviton
- (d) Superior Essex

xii) Typical outlet configurations:

- (1) Workstation: two (2) Category 6A cables
- (2) Wireless access points: two (2) Category 6A cables
- (3) CCTV cameras: one (1) Category 6A cable

- 7. Wireless access points shall be located to provide Wi-Fi coverage throughout the building and immediate building exterior (building-mounted) to achieve 99% coverage.

### **C. Audio Visual and Controls Systems**

#### **1. PA System**

- i) The PA system will provide audible notification of announcements and recorded content.
- ii) The PA system will integrate with a visual display system that presents departures, arrivals, and bus boarding location.
- iii) The public address system will consist of:
  - (1) In-ceiling or surface mounted loudspeakers
  - (2) Power amplifier and digital signal processor
  - (3) Push-to-talk paging microphone
  - (4) Audio source intake from automated scheduling system, weather alert system, and other operational system equipment.

#### **2. Digital Signage**

- i) Digital signage displays communicate information by playing content from a digital signage player.
- ii) Digital signage will be sized based on AVIXA DISCAS Basic Decision Making viewing with a minimum element height of 4%. (ANSI/INFOCOMM V202.01:2016)
- iii) The standard player solution uses:
  - (1) LED/LCD displays mounted on tilt wall mount, Panasonic or equal.
  - (2) Digital signage players with 64GB micro SD card, BrightSign or equal.
  - (3) Data outlet and duplex power receptacle at display height.
  - (4) Content shall be dynamically pulled content from the cloud.

#### **3. Audiovisual Systems by Space**

- i) Terminal Exterior
  - (1) Passenger loading/unloading zones.
  - (2) PA System
- ii) Lobby / Waiting
  - (1) This entrance space will be utilized by customers for waiting, checking schedules, purchasing tickets, and for accessing the restrooms.
  - (2) This system will include:
    - (a) PA System
    - (b) Digital Signage

- iii) Driver Lounge
  - (1) The driver's breakroom shall have a single display for use by the terminal drivers.
  - (2) This display is intended to display on going weather and have the audio portion of the broadcast broadcasted through PA speakers mounted in the ceiling.

#### **D. Electronic Safety and Security**

1. Electronic Security Overview: the electronic security system at Administration Building shall enhance safety and security within the facilities, ensuring a secure environment for staff and visitors. This section contains proposed access control and video surveillance systems.
2. Access Control:
  - i) Access Control equipment (system controllers, credential readers, alarm switches, field control modules, electronic door hardware, network equipment and power supplies) will be deployed and complement the Roaring Fork Transit Authority operation security plan, policies, and procedures.
    - (1) Basis of Design: Nice/Linear eMerge 5000.
  - ii) All cable and wires will meet or exceed the individual device manufacturers' recommendation.
  - iii) Head end equipment, network equipment, associated control modules and required supporting devices are to be located within a secure Telecom Room.
  - iv) Credential reader technology will be determined following the selection of a credential type.
    - (1) Basis of Design: HID
  - v) The building exterior will be monitored through credential doors, and door contacts.
  - vi) Interior locations will be discussed with the owner. It is expected at this time that the following rooms will require access control:
    - (1) Station Clerk/Ticketing OP155
    - (2) Road Supervisor OP151
    - (3) IDF FM544
3. Surveillance Systems:
  - i) Surveillance system equipment (servers, cameras, control modules, mounts, power supplies and network switches) will be deployed and complement the Roaring Fork Transit Authority Operation Security plan, policies, and procedures.
    - (1) Basis of Design: Mobotix.
  - ii) The surveillance system equipment shall be fully compatible and integrated with the access control system and all intrusion detection equipment.
  - iii) All headend and or network equipment will be installed within a secured telecom or security room.
  - iv) All cable and wires will meet or exceed the individual device manufacturers' recommendations. Cable runs will not exceed device manufacturers recommendations and will terminate in the secured telecom room.
  - v) Surveillance system equipment shall monitor and store a minimum of 60-days of video at 30 fps frame rate.
  - vi) Camera locations and specific views will be determined by the technology design team or specified by Owners.
  - vii) The following recommended camera installation locations will be coordinated with the project team.
    - (1) Access-controlled doors.

- (2) Elevator Cab
- (3) Hallways

### **Phase 6B - Administration Building**

#### **A. Telecommunications**

1. The telecommunications system at the RFTA Phase 6B Administrative Building aims to provide reliable, efficient, and secure infrastructure. Services and systems supported by the communications network include voice, data, CATV, fire alarm, electronic security, building automation, and Owner systems.
2. Telecommunications systems shall comply the RFTA Phase 6 Program of Requirements (POR) dated January 16, 2023, as well as the National Electrical Code (NEC), EIA/TIA standards, and BICSI.
3. Outside Plant:
  - i) Same as Building 6A
4. Equipment Facilities:
  - i) The Administration Building shall have a Main Equipment Room (ER) serving as the primary telecom room and communications entrance facility.
  - ii) Additional telecom rooms (TR's) shall be centrally located on each floor and should be vertically stacked, floor-to-floor to best facilitate cable routing between levels.
  - iii) The ER and TRs shall house telecommunications distribution equipment supporting data, voice, wireless access, and structured cabling distribution for both horizontal and backbone cabling.
5. Distribution Frames:
  - i) The ER and each TR will house an intermediate Distribution Frame (IDF).
  - ii) Distribution frames consist of:
    - (1) Free-standing floor-mounted 4-post racks,
    - (2) Rack-mounted RJ45 patch panels (Category 6A minimum compliance).
    - (3) Rack-mounted fiber optic patch panels.
    - (4) Wall mount copper backbone termination panels.
    - (5) Cross-connect cabling and patch cables.
    - (6) Cable management.
    - (7) Cable runway.
6. Telecommunications Spaces:
  - i) Same as Building 6A.
7. Grounding and Bonding:
  - i) All telecommunications equipment will be bonded to the electrical system ground per TIA-607-D standard.
  - ii) The primary bonding busbar (PBB) shall be located in the ER and be connected to the grounding electrode in the main electrical panel.
  - iii) Secondary bonding busbars (SBB) shall be provided in each TR and shall be connected to the electrical panelboard, cable runway, equipment rack bonding busbar (RBB), and building steel within the telecom room.
  - iv) The Telecommunications Bonding Backbone (TBB) shall extend from the PBB to the SBB on the top floor, with each intermediate SBB tapping off the TBB.
  - v) Bonding provisions shall be provided for cable tray and conduit to connect to the telecommunications bonding system.
8. Horizontal Infrastructure and Cabling:

- i) Same as Building 6A.
  - ii) Backbone Infrastructure and Cabling:
  - iii) Backbone infrastructure and cabling shall maintain a hierarchical star topology.
  - iv) Backbone cabling shall be routed in basket-style cable tray above accessible ceilings.
  - v) EMT conduit shall be used where cabling is routed through inaccessible partitions; pull-boxes shall be provided, as required.
  - vi) The following backbone cables will be homerun from the ER to each TR:
    - (1) One (1) 12-strand Singlemode OS2 optical fiber, plenum-rated (OFNP)
    - (2) One (1) 25-pair Category 5e UTP, plenum-rated – for analog phone lines required to support the life safety systems and elevators.
  - vii) All fiber strands shall be terminated and housed in a fiber optic patch panel.
  - viii) Fiber connectors shall be UPC, ceramic, epoxy polish, and LC type. Fiber connectors shall be pre-connectorized pigtail assemblies and fusion spliced to the backbone.
  - ix) Each pair of the Cat5e UTP cabling shall be terminated to pre-loaded rack mount backbone patch panel in the ER and in each TR.
9. Distributed Antenna Systems (DAS)
- i) Life safety DAS (ERRCS) and cellular DAS systems are not included in the current design scope.
  - ii) An ERRCS will be required and should be coordinated with the AHJ. A
  - iii) Cellular DAS should be considered to augment cellular connectivity inside the facility.

## **B. Audio Visual and Control Systems**

- 1. Digital Signage
  - i) Same as Building 6A.
- 2. Room Scheduling
  - i) Room scheduling displays are intended to communicate room booking information by pulling schedule data from a central database or calendar.
  - ii) At this time, all conference rooms are intended to have a room scheduling panel. However, the project may target savings in these systems by downsizing the touch panel to a 5" or 7" model or forego the touch panel entirely and only installing rough-in.
  - iii) Room scheduling panels are anticipated at the following spaces:
    - (1) Multipurpose
    - (2) Small Meetings
    - (3) Standard Conference (Qty 2)
    - (4) Large Conference
- 3. Audiovisual Systems by Space
  - i) Pre-function
    - (1) This entrance space will be utilized for multiple functions, including as a pre-function area for the adjacent multipurpose space or overflow for the multipurpose space.
    - (2) This system will include:
      - (a) Displays, wall-mounted above counter height
      - (b) A digital signage player
      - (c) A wired HDMI video input on the wall
      - (d) A wireless content sharing device

- (e) In-ceiling loudspeakers
  - (f) A wall-mounted button panel to control the system (display on/off, audio volume, video source selection).
- ii) Multipurpose
  - (1) To keep this space functional for multiple uses and configurations, the AV systems included will be relatively minimal.
  - (2) This system will include:
    - (a) Displays, wall-mounted above counter height
  - (3) A wired HDMI video input available on the wall
    - (a) A wireless content sharing device
    - (b) In-ceiling loudspeakers
    - (c) Wireless microphones (qty 2)
    - (d) A wall-mounted button panel to control the system (display on/off, audio volume, video source selection).
- iii) Small Meeting
  - (1) The small meeting room is intended to be collaborative break-out spaces used by small groups.
  - (2) These systems will include:
    - (a) Displays, wall-mounted above table height.
    - (b) A wired HDMI video input, available on the wall.
    - (c) A wireless content sharing device.
    - (d) A wall-mounted button panel to control the system (display on/off, audio volume, video source selection).
    - (e) BYO video conferencing system using Vaddio HuddleSHOT or equal, which provides a camera, microphone, and speaker in a wall-mounted sound bar form factor.
- iv) Standard Conference (Qty: 2)
  - (1) The standard conference rooms are intended to be collaborative meeting spaces used by small-to-medium sized groups.
  - (2) These spaces have walls composed entirely of glazing which limits the ability to mount AV equipment to the walls. This necessitates the use of systems mounted to mobile furniture or ceiling-mounted equipment.
  - (3) These systems will include:
    - (a) Displays, mounted to a portable cart OR ceiling mount projector and motorized screen.
    - (b) A wired HDMI video input, available at the portable cart OR via poke-thru at the floor and extended to the tabletop.
    - (c) A wireless content sharing device.
    - (d) A surface-mounted touch screen or button panel to control the system (display on/off, audio volume, video source selection) located at the conference room table.
    - (e) BYO video conferencing system: for a portable cart, a Vaddio HuddleSHOT or equal, which provides a camera, microphone, and speaker in a sound bar form factor OR an installed solution that would leverage ceiling-mounted microphones and loudspeakers, and a camera integrated into the projection screen.
- v) Large Conference (Qty: 1)

- (1) The Large Conference room is intended to be an executive board room and meeting space for larger groups.
- (2) This space has walls composed entirely of glazing which limits the ability to mount AV equipment to the walls. This necessitates the use of ceiling-mounted AV equipment and connectivity at the table via poke-thru' s at the floor.
- (3) These systems will include:
  - (a) A ceiling mount projector and motorized screen.
  - (b) Several wired HDMI video inputs, via poke-thru at the floor and extended to the tabletop.
  - (c) A wireless content sharing device.
  - (d) A tabletop touch screen to control the system (display on/off, audio volume, video source selection) located at the conference room table.
  - (e) BYO video conferencing support that allows users with a laptop running Teams or Zoom to leverage the installed AV components (microphones, loudspeakers, camera) to conduct meetings.
  - (f) An integrated video conferencing system using an in-room PC that allows the system to run natively without the need for an external laptop. This system includes ceiling-mounted microphones and loudspeakers, and two (2) PTZ cameras – one integrated into the projection screen and the other mounted to the ceiling at the opposite end of the room.

### **C. Electronic Safety and Security**

1. Electronic Security Overview: the electronic security system at Administration Building shall enhance safety and security within the facilities, ensuring a secure environment for staff and visitors. This section contains proposed access control and video surveillance systems.
2. Access Control:
  - i) Access Control equipment (system controllers, credential readers, alarm switches, field control modules, electronic door hardware, network equipment and power supplies) will be deployed and complement the Roaring Fork Transit Authority operation security plan, policies, and procedures.
    - (1) Basis of Design: Nice/Linear eMerge 5000.
  - ii) All cable and wires will meet or exceed the individual device manufacturers' recommendation.
  - iii) Head end equipment, network equipment, associated control modules and required supporting devices are to be located within a secure Telecom Room.
  - iv) Credential reader technology will be determined following the selection of a credential type.
    - (1) Basis of Design: HID
  - v) The building exterior will be monitored through credential doors, and door contacts.
  - vi) Interior locations will be discussed with the owner. It is expected at this time that the following rooms will require access control:
    - (1) Secure Storage/Safe AD144,
    - (2) Mech FM544,
    - (3) Storeroom/Media AD223,
    - (4) MDF FM541,
    - (5) Level 1 Electrical Room,
    - (6) Secure File Storage AD206,

- (7) IDF FM542,
  - (8) Level 2 Electrical Room,
  - (9) IDF FM543,
  - (10) Level 3 Electrical Room,
  - (11) Special Project Mgr AD112,
  - (12) Executive Officer AD104,
  - (13) Executive Officer AD103,
  - (14) Executive Officer AD102,
  - (15) Executive Officer AD101.
3. Surveillance Systems:
- i) Surveillance system equipment (servers, cameras, control modules, mounts, power supplies and network switches) will be deployed and complement the Roaring Fork Transit Authority Operation Security plan, policies, and procedures.
    - (1) Basis of Design: Mobotix.
  - ii) The surveillance system equipment shall be fully compatible and integrated with the access control system and all intrusion detection equipment.
  - iii) All headend and or network equipment will be installed within a secured telecom or security room.
  - iv) All cable and wires will meet or exceed the individual device manufacturers' recommendations. Cable runs will not exceed device manufacturers recommendations and will terminate in the secured telecom room.
  - v) Surveillance system equipment shall monitor and store a minimum of 60-days of video at 30 fps frame rate.
  - vi) Camera locations and specific views will be determined by the technology design team or specified by Owners.
  - vii) The following recommended camera installation locations will be coordinated with the project team.
    - (1) Access-controlled doors.
    - (2) Elevator Cab
    - (3) Hallways

## **Phase 8 - Storage Building**

### **D. Telecommunications**

- 1. Limited telecommunications scope is expected for the new Storage Building. Backbone cabling will be run from the nearest serving IDF to support communications and security requirements.
- 2. A wall mount telecommunication enclosure will house an IDF for consolidation of backbone cabling, horizontal cabling, and network equipment.
- 3. Communications outlets and wireless access points shall be provided as dictated by program requirements.

### **E. Electronic Safety and Security**

- 1. Electronic security system equipment will be provided at the Storage Building and will be tied back to systems elsewhere on campus for monitoring and control.
- 2. Overhead door contacts and surveillance cameras are expected to be installed at exterior doors to the storage building.
- 3. Surveillance cameras are expected to be installed at interior and exterior locations at the storage building.

## **Acoustical Design**

### **A. General Information**

1. Acoustical design criteria outlined herein are based on the January 16, 2023, RFTA Program of Requirements (POR) for the project. Salas O'Brien is hereby confirming acoustical design criteria identified in the POR, proposing supplementary acoustical design criteria not identified in the POR, and providing recommendations to fulfill these acoustical design goals.

### **Phase 6A – Transit Station**

#### **A. Room Acoustics**

1. Reverberation Time Criteria
2. Reverberation Time (RT) criteria is a single number rating that describes average reverberation in a space (125-4000Hz). Per the POR, spaces should be designed to control RTs to not exceed those listed in the following tables. Room type RT values that are not identified in the POR are indicated with an asterisk (\*).

| <u>Room Type</u> | <u>Maximum RT (seconds)</u> |
|------------------|-----------------------------|
| Office (private) | 0.6                         |
| Ticketing        | 0.8                         |
| Lounge           | 0.8*                        |
| Lobby            | 1.0*                        |

3. Office (private)
  - i) This room should have a mineral fiber type sound-absorbing ACT ceiling (NRC 0.60 minimum, CAC 35 minimum) throughout the entire ceiling area.
4. Ticketing
  - i) This room should have a mineral fiber type sound-absorbing ACT ceiling (NRC 0.85 minimum, CAC 35 minimum) throughout the entire ceiling area. Additionally, the floor should be carpeted.
5. Lounge
  - i) These rooms should have mineral fiber type sound-absorbing ACT ceilings (NRC 0.80 minimum, CAC 35 minimum) throughout the entire ceiling area.
6. Lobby
  - i) This space should have a 1" thick minimum sound-absorptive ceiling finish (NRC 0.80 minimum) concealing most of the roof underside area.

#### **B. SOUND ISOLATION**

1. Sound Isolation Criteria for Interior Walls
  - i) Sound Transmission Class (STC) is a single number rating that describes a partition's sound transmission loss in a controlled lab environment. Sound isolation in the field (ASTC) is typically 3-5 points lower than the partition's STC measured in a lab. Per the POR, interior elements should be designed to perform at STC values equal or greater than those listed in the following tables. Room type STC values not identified in the POR are indicated with an asterisk (\*). It is our understanding that operable partitions will not be used on this project.

| <u>Room Type</u> | <u>Minimum STC</u> |
|------------------|--------------------|
| Office (private) | 45                 |
| Ticketing        | 45                 |
| Toilet (private) | 45*                |

## 2. Interior Wall Types

- i) For STC 45 walls, partition should consist of two layers of 5/8", 2psf minimum gypsum board on one side of a single 3-5/8" steel stud with batt insulation in stud cavities and one layer of 5/8", 2psf gypsum board on the other side of the stud. This wall shall extend and seal to floor/roof deck above.

## 3. Interior Doors

- i) The POR calls for STC 45 rated solid-core wood doors. However, we do not recommend specifying STC rated door/frame/hardware assemblies for this project due to their high costs and low value. STC rated solid-core wood door/frame assemblies come as a kit of many parts, and in our experience, do not typically perform better than properly specified built-up gasketed door/frame/hardware assemblies that are simpler to install. We recommend that interior doors at rooms with STC partitions consist of kerfed steel frame filled with mineral wool, solid-core wood door with 6psf minimum surface weight, 5/8" minimum laminated glass at any vision lite, kerf-mounted silicone bulb type head/jamb seals, fixed neoprene multi-fin door bottom sweep, and metal threshold. If requirement for STC rated door/frame/hardware assemblies is maintained, then we instead recommend STC 45+ rated wood-veneer-faced hollow metal doors that have the door, frame, and hardware factory-assembled.

## 4. Interior Windows

- i) Interior windows in walls with STC 45 requirements should have steel frame filled with mineral wool, dual glazing consisting of 1/4" minimum laminated glass and 3/16" minimum monolithic glass separated by a 2" minimum airspace, and neoprene or silicone gasketing.

## 5. Sealed Joints and Penetrations

- i) All walls and floors at sound isolating assemblies are to have backer rod and acoustical sealant applied on both sides of the wall and floor at perimeter joints and at penetrations due to structural and building service systems.

# C. BUILDING SERVICES NOISE

## 1. Noise Criteria

- i) Noise Criteria (NC) is a single number rating that describes maximum background (ambient) noise levels within interior spaces. Per the POR and 2023 ASHRAE Handbook – HVAC Applications, building services should be designed to produce NC levels not exceeding those listed in the following tables.

| <u>Room Type</u> | <u>Maximum NC</u> |
|------------------|-------------------|
| Office (private) | 35                |
| Ticketing        | 35                |
| Lounge           | 40                |
| Lobby            | 40                |
| Corridor         | 45                |

2. Air Handling Units
  - i) Air handling units should be selected for efficient operation and low noise levels to minimize the extent of noise reduction measures necessary. Rooftop-mounted air handling units should be supported directly on a vibration isolation curb with constrained spring isolators.
3. Heat Pumps
  - i) Heat pumps should be quiet-type with insulated panels and compressor enclosures. Heat pumps should be located away from spaces with criteria of NC-40 or less.
4. VAV Terminal Units
  - i) VAV terminal units should be quiet-type (e.g., Price SDV) to minimize the extent of noise reduction measures necessary.
5. Duct Distribution
  - i) Avoid running ductwork serving spaces with criteria of NC-35 or less directly from an adjacent, noisy space such as a mechanical room or restroom. Main ducts should be run within hallways where possible, with separate branch ducts serving each individual space.
  - ii) Ducts should be designed to have duct air velocities not exceeding the following:

|                                                                      | NC-30                           | NC-35 | NC-40 | NC-45 | NC-50 |
|----------------------------------------------------------------------|---------------------------------|-------|-------|-------|-------|
| Location:                                                            | Maximum duct air velocity (fpm) |       |       |       |       |
| Main supply and return ducts outside of space                        | 1800                            | 2000  | 2200  | 2400  | 2600  |
| Main supply and return ducts within space (including above ceilings) | 1100                            | 1300  | 1500  | 1700  | 1900  |
| Branch supply and return ducts                                       | 800                             | 900   | 1000  | 1100  | 1200  |
| Terminal supply and return ducts < 10 diameters from outlet/inlet    | 500                             | 550   | 600   | 650   | 700   |

- iii) Air balancing dampers should be located at branch takeoffs away from supply outlets and return inlets – a minimum of 5 duct diameters from the nearest terminal device.
- iv) Supply diffusers and return grilles should have NC ratings at least 5 points below the space's NC target.
- v) Return air systems at spaces with gasketed doors should have a lined sheet metal transfer duct in a "U" or "S" profile thru partitions. Minimum length of transfer duct should be 7 duct diameters. Return air grilles within ACT ceilings should have a lined sheet metal elbow boot. Minimum length of boot to be 4 duct diameters.

6. Duct Lining
  - i) Internal duct lining should be used at final branch return ducts and at supply ducts downstream of VAV terminal units serving spaces with criteria of NC-40 or less. Duct lining should be 1" thick minimum, 1.5 pcf density fiberglass core with integral coated facing.
7. Flex Ducts
  - i) Flex ducts with 1" thick acoustical insulation should be provided for all concealed terminal supply and return ducts located less than 10 duct diameters from supply diffusers and return grilles.
8. Duct Sound Attenuators
  - i) For general pricing purposes, anticipate a 7-foot long elbow duct sound attenuator in the main supply and return duct for each AHU, a 7-foot long duct sound attenuator downstream of heat pumps serving spaces that are NC-40 or less, and a 5-foot long duct sound attenuator downstream of VAV terminals serving spaces that are NC-30.
9. Vibration Isolation
  - i) Mechanical and plumbing equipment is to be supported from vibration isolators per the 2023 ASHRAE Handbook – HVAC Applications. Ductwork and piping connections to vibration isolated equipment are to use flexible duct/pipe connectors.
  - ii) All transformers should be supported from elastomer-in-shear mounts. Electrical connections to transformers and vibration isolated mechanical/plumbing equipment should be made with flexible steel conduit installed in a slack "U-shape" in sufficient length to not become taut during normal operation.
10. Transformer Sound Levels
  - i) Transformer sound levels should be at least 3dB less than sound levels indicated in NEMA ST 20.
11. Electrical/Telecommunications Box Penetrations
  - i) For back boxes recessed into sound walls, back-to-back boxes should be staggered a minimum of 16 inches o.c. Back boxes and conduit connections should be covered with sound putty pads (e.g., Kinetics Isobacker).

## **Phase 6B - Administration Building**

### **A. ROOM ACOUSTICS**

#### **1. Reverberation Time Criteria**

| <u>Room Type</u>                         | <u>Maximum RT (seconds)</u> |
|------------------------------------------|-----------------------------|
| Conference                               | 0.6*                        |
| Meeting                                  | 0.6*                        |
| Quiet                                    | 0.6*                        |
| Office (private)                         | 0.6                         |
| Office/Workspace/Copy/Plan (shared/open) | 0.8                         |
| Workroom                                 | 0.8*                        |
| Flexible                                 | 0.8*                        |
| Fitness                                  | 0.8*                        |
| Locker                                   | 0.8*                        |
| Kitchenette                              | 0.8*                        |
| Pre-Function                             | 1.0*                        |
| Lounge/Reception                         | 1.0*                        |

2. Conference, Meeting, Flexible
  - i) These rooms should have mineral fiber type sound-absorbing ACT ceilings (NRC 0.80 minimum, CAC 35 minimum) throughout the entire ceiling area. Two adjacent walls should have 1" sound-absorbing panels (NRC 0.80 minimum) from 3'-0" AFF to door height.
3. Flexible
  - i) This room should have a mineral fiber type sound-absorbing ACT ceiling (NRC 0.80 minimum, CAC 35 minimum) throughout the entire ceiling area. Interior walls should have tackable 1" sound-absorbing panels (NRC 0.80 minimum) from 3'-0" AFF to door height.
4. Quiet, Office (private), Fitness, Locker, Kitchenette
  - i) These rooms should have mineral fiber type sound-absorbing ACT ceilings (NRC 0.60 minimum, CAC 35 minimum) throughout the entire ceiling area.
5. Office/Workspace/Copy/Plan/Workroom (shared/open)
  - i) These rooms should have mineral fiber type sound-absorbing ACT ceilings (NRC 0.85 minimum, CAC 35 minimum) throughout the entire ceiling area. Additionally, the floor should be carpeted.
6. Pre-Function, Lounge/Reception
  - i) These rooms should have mineral fiber type sound-absorbing ACT ceilings (NRC 0.80 minimum, CAC 35 minimum) throughout the entire ceiling area.

## B. SOUND ISOLATION

### 1. Sound Isolation Criteria for Interior Walls and Floors

| Room Type                                                                     | Minimum |     |
|-------------------------------------------------------------------------------|---------|-----|
| STC                                                                           |         |     |
| Flexible (adjacency to Women/Men restroom)                                    | 60*     |     |
| Quiet (adjacency to Women/Men restroom)                                       |         | 60* |
| Office (private) (adjacency to Women/Men restroom)                            | 60*     |     |
| Meeting (adjacency to Office [private])                                       | 50*     |     |
| Flexible (adjacency to Media/Pre-Function/Corridor)                           |         | 45  |
| Quiet (adjacency to Storage/Office [shared/open])                             |         | 45* |
| Meeting (adjacency to Copy/Office [shared/open])                              |         | 45  |
| Conference                                                                    | 45      |     |
| Office (private) (adjacency to Plan/Office[private]/Office[shared/open]/Plan) |         | 45  |
| Fitness                                                                       | 45      |     |
| Toilet (private)                                                              | 45*     |     |

### 2. Interior Wall Types

- i) For STC 45 walls, partition should consist of two layers of 5/8", 2psf minimum gypsum board on one side of a single 3-5/8" steel stud with batt insulation in stud cavities and one layer of 5/8", 2psf gypsum board on the other side of the stud. This wall shall extend and seal to floor/roof deck above.
- ii) For STC 50 walls, partition should consist of two layers of 5/8", 2psf minimum gypsum board on both sides of a single 3-5/8" steel stud with batt insulation in stud cavities. This wall shall extend and seal to floor/roof deck above.

3. For STC 60 walls, partition should consist of two layers of 5/8", 2psf minimum gypsum board on both sides of double 3-5/8" steel studs (separated by 1/4" gap) with batt insulation in stud cavities. This wall shall extend and seal to floor/roof deck above.
4. Interior Floor Types and Finishes
  - i) To meet STC 45+ floor/ceiling composite construction at Levels 2 and 3, the floor structure should consist of a 3" minimum thickness of normal weight concrete and ceilings below should be ACT. At Levels 2 and 3; all offices (private and shared/open), open office circulation areas, and conference/meeting rooms should have carpet flooring to reduce noise/vibration from footfall and chair movement.
  - ii) At the Fitness room, a 1/2" wide slab isolation joint should be provided along the room perimeter and filled with resilient polyethylene foam. Minimal rebar dowels should cross the joint. Additionally, 1/2" thick rubber sports flooring should be provided within the Fitness room to reduce noise/vibration from weights, treadmills, etc.
5. Interior Doors
  - i) Same as Phase 6A.
6. Interior Windows
  - i) Same as Phase 6A.
7. Sealed Joints and Penetrations
  - i) Same as Phase 6A.
8. Workstation Furniture
  - i) To provide some, albeit limited, speech privacy at open workstations, furniture partitions should surround workstations on 3 sides with an opaque partition up to the height desired to interrupt sightlines but no higher than 51" above the floor. Above the opaque partitions, there should be glazing extending up to at least 60" above the floor. The interior side of opaque partitions above counter height should have 1" sound-absorbing panels.
9. Electronic Sound Masking (designed by others)
  - i) To provide additional speech privacy via steady-state background noise levels; Offices (private) should have electronic sound-masking systems operating at 40-42dBA and Office/Workspace/Copy/Plan/Workroom (shared/open) areas should have electronic sound-masking systems operating at 45-48dBA.

### C. BUILDING SERVICES NOISE

#### Noise Criteria

Room type NC levels not identified in the POR or ASHRAE Handbook are indicated with an asterisk (\*).

| Room Type                                | Maximum NC |
|------------------------------------------|------------|
| Flexible                                 | 30         |
| Conference                               | 35         |
| Meeting                                  | 35         |
| Office (private)                         | 35         |
| Office/Workspace/Copy/Plan (shared/open) | 35         |
| Quiet                                    | 35         |
| Workroom                                 | 40*        |
| Pre-Function                             | 40*        |
| Lounge/Reception                         | 40         |

|                        |     |     |
|------------------------|-----|-----|
| Kitchenette (open)     | 40  |     |
| Fitness                |     | 40* |
| Corridor               |     | 45  |
| Locker                 |     | 50* |
| Kitchenette (enclosed) | 50* |     |

1. Air Handling Units
  - i) Same as Phase 6A.
2. Heat Pumps
  - i) Same as Phase 6A.
3. VAV Terminal Units
  - i) VAV terminal units should be quiet-type (e.g., Price SDV) to minimize the extent of noise reduction measures necessary. VAV terminal units serving spaces with targets of NC-30 or less should be located outside the noise-sensitive space or outside the ceiling plenum of the noise-sensitive space.
4. Duct Distribution
  - i) Same as Phase 6A.
5. Duct Lining
  - i) Same as Phase 6A.
6. Flex Ducts
  - i) Same as Phase 6A.
7. Duct Sound Attenuators
  - i) Same as Phase 6A.
8. Routing of Piping
  - i) Mechanical and plumbing piping should not be routed through spaces with criteria of NC-30.
9. Vibration Isolation
  - i) Same as Phase 6A.
10. Transformer Sound Levels
  - i) Same as Phase 6A.
11. Electrical/Telecommunications Box Penetrations
  - i) Same as Phase 6A.

#### **Phase 8 - Storage Building (N/A)**

## Detailed Space List - Transit

| Program Number                                         | Priority | Space Name                     | Qty | Standard | Required Area | Requested Area | Excluded Area |
|--------------------------------------------------------|----------|--------------------------------|-----|----------|---------------|----------------|---------------|
| Office Spaces                                          |          |                                |     |          |               |                |               |
| OP151                                                  | A        | Office - Raod Supervisor       | 1   | 100 NASF | 100 NASF      |                |               |
| OP155-56                                               | A        | Station Clerk (2 Wkstns)       | 1   | 240 NASF | 240 NASF      |                |               |
| OP157                                                  | A        | Break                          | 1   | 60 NASF  | 60 NASF       |                |               |
| OP158                                                  | A        | Staff Toilet                   | 1   | 60 NASF  | 60 NASF       |                |               |
| Support Spaces                                         |          |                                |     |          |               |                |               |
| OP205                                                  | A        | Lost & Found Storeroom         | 1   | 180 NASF | 180 NASF      |                |               |
| OP206                                                  | A        | Merchandise Sales              | 1   | 30 NASF  | 30 NASF       |                |               |

**Re: Results of Semiannual Groundwater Monitoring. Progress Report on voluntary cleanup at the former EIMCO facility in Glenwood Springs, Colorado. Request for No Further Action Letter and Well Closure**

Dear Mr. Avramenko:

On April 27, 1999, FOREMOST Solutions, Inc. (FSI) proposed a plan for a voluntary cleanup of the former EIMCO facility in Glenwood Springs, Colorado. Your office provided comments and approved of the plan on May 20, 1999. The plan was subsequently put into operation. This document provides a progress report on that project which we are submitting for our client, Glenwood Industrial, LLC. It also provides the results of semiannual groundwater monitoring during June and December 1999, and it makes a request for well closure and a "No Further Action" letter from your office. We would appreciate your review and receipt of any comments you might have regarding this report and on our request.

**EXECUTIVE SUMMARY**

Semiannual groundwater monitoring continues to show that the concentrations of total dissolved chromium are below the Colorado Drinking Water Standard at the down gradient Monitoring Well 5 (MW-5). Concentrations of total dissolved chromium at this location have been below the Federal Drinking Water standard for the past two years and at or below the Colorado Standard for the past year during both high and low water level periods. In June 1999, concentrations were below the Colorado Standard in all wells on the property except for MW-3, which at 0.12 mg/l was only slightly above the Federal Standard of 0.10 mg/l. Semiannual groundwater monitoring in December, 1999 showed that all wells were at or below 0.02 mg/l which is well below the Colorado Standard of 0.05 mg/l. These results indicate that chromium contamination from the site is no longer impacting the down gradient water quality. Consequently, FSI requests that the Colorado Department of Public Health and Environment (CDPHE) approve well closure and issue a letter of No Further Action for this site.

The June 1999 sampling did indicate that small amounts of chromium were still continuing to leach from under the building during high groundwater periods. This impact is seen as an increase at MW-3. In order to minimize this localized impact, Glenwood Industrial LLC decided to install a treatment system that would remove residual amounts of soluble chromium that might be trapped under the building so that it could no longer contribute groundwater impacts during high water periods.

A combined chemical and biochemical recirculation system was designed by FSI for this purpose. The system was approved by CDPHE and placed into operation between July and December 1999.

Groundwater monitoring from wells downgradient of the former plating operation showed that measurable amounts of dissolved chromium were flushed from under the building by the remediation system. Contaminated groundwater was removed from MW-3 and discharged into a treatment/infiltration trench near the location of the former plating pit. A bioremediation matrix in the trench was design to provide reducing conditions that would precipitate the soluble chromium in the recirculated groundwater. This system was augmented with the addition of a chemical reducing agent, calcium polysulfide, in order to speed the establishment of reducing conditions and to minimize soluble chromium bypassing the treatment system and going to the Colorado River.

The combined treatment system proved to be successful in removing soluble chromium from under the warehouse building. Active pumping of groundwater was suspended in December when the levels in all wells had dropped to below the Colorado Standard or to nearly pretreatment conditions. Testing of groundwater in down gradient wells in March 2000 verified that chromium concentrations continue to stay below the Colorado Standard.

## **BACKGROUND**

The former EIMCO Coal Machinery, Inc. facility located at 2222 Devereux Road, Glenwood Springs, Colorado was a suspected source for low levels of hexavalent chromium contamination in groundwater. According to file records, this company performed chromium plating of mining tools at this facility until 1992. The plating was conducted in tanks that were located in a concrete-block pit along the South side of the warehouse building. A site assessment of the property in 1992 showed that the only contaminant of concern was chromium that was present in soil under the pit. Apparently, leakage of aqueous chromium solutions from the pit area had led to hexavalent chromium contamination in the soil under the building. The pit and some of the adjacent soils were subsequently removed.

Monitoring of groundwater at the site has shown that groundwater moves in a north-northwest direction (**Figure 1**) and that hexavalent chromium contamination continues to persist under the building. Groundwater flowing under the building continued to exhibit low levels of hexavalent chromium contamination in MW-3 especially during high water table conditions. The chrome concentrations are lowest when the groundwater levels are lowest, i.e. in December and highest when the groundwater levels rise, i.e. in June. The attached **Table 1** summarizes the levels of chrome in groundwater samples from the site between July 1992 and December 1998. The concentrations have continued to decline over time and were nearing State and Federal standards in 1998. Groundwater from the farthest down gradient monitoring well (MW-5) was below the State Standard in December 1998.

## **CURRENT SITUATION**

In April 1999, the EIMCO property was sold to Glenwood Industrial, LLC (P.O. Box 1150 in Glenwood Springs, Colorado 81602) who subsequently engaged FOREMOST Solutions, Inc. (FSI) to provide technical consultation and site remediation. All correspondence regarding these activities should be sent to FSI at 350 Indiana Street, Suite 415, Golden, CO 80401.

The CDPHE had required EIMCO to test groundwater at the site. EIMCO did this on a quarterly basis between 1993 and 1997. Since 1997, this testing has been done on a semi-annual basis.

FSI's evaluation of the site led to the conclusion that residual amounts of hexavalent chromium were still trapped in the pore spaces of the soil under the building and former pit area. Whenever the groundwater would rise, some of this chromium would be mobilized and carried to the downstream monitoring wells MW-3 and MW-5 and then into the Colorado River. The levels of chromium contamination observed at these wells continued to decline over the years. In June 1998 chromium concentrations were below both Federal and State groundwater standards at all wells but MW-3 where the concentration of total dissolved chromium was 0.25 mg/l. In December 1998, all groundwater monitoring wells were below the Colorado Standard of 0.05 mg/l.

On June 29, 1999, the concentration of total dissolved chromium was below the Colorado Standard for all wells except MW-3 where the concentration was 0.12 mg/l. This is very close to the Federal Standard of 0.10 mg/l and only twice the Colorado Standard. However, both Glenwood Industrial and CDPHE would like to see a permanent solution to this problem and a certification of "no further action" from the State. Consequently, Glenwood Industrial requested FSI to install and operate a remediation system that would remove residual soluble chromium from the vadose zone under the building and thereby minimize the potential for periodic contamination of the groundwater when the water table would rise.

## **REMEDIATION SYSTEM**

FSI proposed to install a recirculating anaerobic bioremediation system that would reduce the highly water soluble hexavalent chromium to insoluble trivalent chromium. The system relied on 1) bioremediation of natural organic matter to provide the reducing conditions for chromium and 2) on the addition of a chemical reducing agent to enhance the reducing conditions. This system was constructed in May 1999 and placed into operation in July 1999.

### **Bioremediation System**

A plan view of the system is shown in **Figure 1A**. A side view of the system is shown in **Figure 2**. The system was designed to flush soluble chromium from under the warehouse building and former plating pit. This soluble chromium was then collected by a downstream pumping well and discharged into an anaerobic bioremediation matrix located in a treatment/infiltration (T/I) trench above the former plating pit. The system was designed so that soluble hexavalent chromium would be reduced to the insoluble trivalent chromium in the anaerobic environment of the trench.

Soluble components of the natural organic materials in the bioremediation matrix are carried with the recirculated groundwater that infiltrates into the soil under the building. A portion of the chromium under the building would be reduced as it reacts with these soluble organic components. The reduced chromium precipitates and remains fixated as insoluble trivalent chromium in the soil pore spaces under the building. This reduces the amount of soluble chromium that will have to be recirculated through the treatment system and speeds the time required to remove soluble chromium from the groundwater.

### **Chemical Fixation System**

Dilute aqueous solutions of a water-soluble chemical reducing agent (calcium polysulfide) were added to the groundwater and the bioremediation system after several months in order to speed the establishment of the necessary reducing conditions and further decrease the time required for treatment.

### **RULE AUTHORIZATION**

An application for a Class V Injection Well Rule Authorization was made to the U.S. Environmental Protection Agency (US EPA) for the recirculation of groundwater at the site and for the injection of aqueous solutions of calcium polysulfide. This application was approved by D. Edwin Hogle, Director of the Groundwater Program, US EPA, Region 8, and FSI was notified by letter on July 30, 1999.

### **SYSTEM INSTALLATION**

A diagram of the remediation system is shown in **Figure 1A**. The recirculation line trench extends from MW-3 along the West and South sides of the building to the T/I trench, a total of about 150 ft. in length. The T/I trench was located as close to the former plating pit as possible. The recirculation line and the distribution line in the T/I trench were constructed of 1 in. Schedule 40 PVC pipe with 0.02 in. slots. The distribution line was slotted on one side. A 2 in. slotted riser was installed in the center of the T/I trench to observe the water level in the trench.

A Perc Test was performed to measure the rate of water infiltration or percolation into the near surface soils for the construction of a septic system on the property. The Perc Test provided an estimate of percolation rate through the bottom of the T/I trench and allowed FSI to appropriately size a submersible pump for the treatment system. A submersible pump was installed in MW-3 and connected to the recirculation line along with a three-way valve for water sampling and drainage.

### **T/I TRENCH AND BIOREMEDIATION MATRIX**

The T/I trench was 20 ft long, 2 ft. wide and 4 ft. deep. The sides of the trench and the bioremediation matrix were covered with black plastic sheeting to reduce water losses to the sides, retain heat, minimize oxygen infusion and to help maintain anaerobic conditions. The bottom 2.5 ft. of the trench was filled with about 100 cubic ft. of the Bioremediation Matrix.

The Bioremediation Matrix was made up of porous ceramic diatomaceous earth pellets (Isolite® CG-6) and dry, pulverized cow manure, about 70/30 by volume. The manure provided a natural rich organic and nutrient material with a high microbial population. The Isolite provided a good matrix for the bacteria and allowed adequate water flow through the fine-grained manure. A cross section of the T/I trench is shown in **Figure 3**.

An access pipe was installed in the center of the T/I trench so that calcium polysulfide solutions could be added to the bottom of the trench.

A float switch was used to control the submersible pump and the level of water in the T/I trench.

## SYSTEM OPERATION

The submersible pump was operated at a frequency that would keep the T/I trench filled with about 2.5 ft. of water. The system was turned on and off on a regular basis to assure that overflow did not occur.

## GROUNDWATER MONITORING

FSI continued with the collection of groundwater samples from the monitoring wells on the site and arranged for them to be tested at Evergreen Analytical Laboratories for Total Dissolved Chromium according to Standard US EPA procedures. During operation of the treatment system, samples from the recirculation system at MW-3 were tested on a monthly basis. Samples were also tested from MW-2 and MW-4 to see if the system flushed any soluble chromium into these areas. The results of these analyses are shown in **Table 2**. Laboratory test reports are attached in **Appendix A**. FSI periodically made water level measurements and these results are shown in **Table 3**.

## RESULTS OF TREATMENT SYSTEM OPERATION

Concentrations of total dissolved chromium at all monitoring wells were at or below the Colorado Standard of 0.05 mg/l in December 1998. During the semiannual groundwater sampling in June 1999 all monitoring wells were below the Colorado Standard except for MW-3 where the concentration of 0.12 mg/l was only slightly above the Federal Standard of 0.1 mg/l. The water table at this time was relatively high at 26.1 ft. bgs in MW-3. The remediation system was placed into operation after the semiannual sampling.

Groundwater samples from MW-2 and MW-3 were tested after the remediation system was in operation for several weeks. MW-2 is closer to the location of the former plating area than MW-3, and it showed the first effects of the recirculation system. At this time, MW-2 had a concentration of 0.36 mg/l while MW-3 was unchanged at 0.11 mg/l. As anticipated, the recirculated groundwater was seeping through the Vadose zone and pushing before it some quantity of chromium contaminated water that had been trapped in the pore spaces above the water table. These two wells were tested again in September and the results showed that the concentrations in MW-2 were dropping as the front moved past, and the concentrations in MW-3 were increasing as the front arrived at this down gradient location. The groundwater level at this time had dropped to about 31.5 ft. bgs at MW-3, and stayed at this level through the end of December 1999. The groundwater level started to rise again in April 2000 (**Table 3**).

MW-2, MW-3 and MW-4 were tested in October. This testing showed no significant contamination at MW-4. However, the concentrations at MW-2 and -3 were relatively unchanged at about 0.25 mg/l. Higher concentrations in MW-3 were not of concern since this water was being pumped back up gradient to the infiltration trench for treatment. However we were concerned that some of the groundwater that passed MW-2 might not be captured by the recirculation system and could flow to the Colorado River. Consequently, we decided to begin the chemical treatment at this time in order to reduce this possibility.

Approximately 200 gallons of a 1% by volume aqueous calcium polysulfide (CPS) solution were added to MW-2 and MW-4, and about 800 gallons were added to the bottom of the T/I trench. The purpose of the CPS was to quickly establish anaerobic or reducing conditions that would fixate any soluble chromium at these locations. This process proved to be successful. Testing of MW-2 and MW-4 in November showed concentrations at or below the Colorado Standard, whereas MW-3 that had no CPS added showed a slight drop to 0.23 mg/l. These wells were tested again in early December and the concentrations of total dissolved chromium then were at or below the detection limit of 0.01 mg/l, and the concentrations at MW-3 had continued to drop to 0.18 mg/l. This drop was indicative that treated water was now reaching MW-3 and that the front of contaminated water had been pumped to the treatment system. Consequently, we decided to stop active recirculation of groundwater at this time in order to allow time for the treated water to drain from the vadose zone and the groundwater levels to return to their natural condition. An additional treatment of CPS was provided at this time to assure that reducing conditions would be maintained in the subsurface.

The semiannual groundwater sampling was performed three weeks later on December 30, 1999. At this time, all monitoring wells were below the Colorado Standard of 0.05 mg/l. In fact, all were at or below 0.02 mg/l. The three monitoring wells closest to the warehouse were sampled again in March 2000. These test results verified that soluble chromium concentrations continue to stay below the Colorado Standard.

## **CONCLUSIONS**

In summary, a combined chemical and biochemical treatment system was installed to remove soluble chromium that had been trapped under the warehouse building. The treatment system was operated until the concentration of chromium in the recirculated groundwater was near pretreatment levels. The treatment system was shown to be successful at removing soluble chromium contamination from groundwater. Testing of down gradient monitoring wells confirmed that essentially all residual soluble chromium has been removed from the system. The calcium polysulfide solution treatment effectively reduced total dissolved chromium concentrations in groundwater to below the Colorado Standard.

Semiannual groundwater monitoring has continued to show that the concentrations of total dissolved chromium are below the Colorado Standard down gradient of the site at MW-5. Concentrations of total dissolved chromium at this location have been below the Federal Standard for the past two years and were at or below the Colorado Standard for the past year and a quarter during both high and low water level periods. These results indicate that chromium from the site is no longer impacting the down gradient water quality. Groundwater monitoring three months after the treatment system was shut down showed that soluble chromium concentrations continue to stay well below the Colorado Standard.

## **REQUEST FOR SITE CLOSURE**

FSI requests closure for this site on the basis that 1) residual soluble chromium has been removed from under the warehouse and no longer poses a threat to down gradient water systems, 2) down gradient groundwater is no longer impacted by the site and 3) this groundwater has continued to stay well below the Colorado Standard for over a year.

FSI requests CDPHE to issue a "No Further Action" letter for the site and approve the closure of the five groundwater monitoring wells at the site. FSI proposes to close these wells by removing the top three ft. of casing and filling the remaining casing with sand and high solids bentonite or cement grout. The ground surface will be restored to its pre-well condition.

FSI would appreciate your review and comments regarding this report and our requests.

Sincerely,  
FOREMOST Solutions, Inc.

Theodore O. Meiggs, Ph.D.  
Vice President & General Manager

RE: Cleanup of Chromium Contamination  
EIMCO / Glenwood Industrial, LLC Site  
2222 Deveruex Road, Glenwood Springs  
COD981544786

Dear Mr. Meiggs:

I have received your April 17, 2000 semiannual groundwater report in which sampling data are presented and the progress of the cleanup effort is described. My review of your report suggests that the combined chemical and biochemical treatment system has converted the highly water soluble hexavalent chromium to insoluble trivalent chromium, thereby stabilizing the contamination and preventing continued leaching to ground water at the Glenwood Springs facility. Test results confirm that ground water quality has improved with the reduction of chromium concentrations to below the State standard for this contaminant in all wells.

Based on the information provided in the April 17<sup>th</sup> report, the treatment of both the source area and ground water appears to have been successful. Unless new data is generated proving otherwise, the Department does not intend to have the owners or tenants of the 2222 Deveruex Road facility pursue this matter any further. No further corrective action is required with regard to this past release. We also concur with your proposal to close the five ground water monitoring wells in accordance with procedures established by the State Engineers Office (Department of Natural Resources, Division of Water Resources). I thank you and your client, Glenwood Industrial, for having chosen to pursue this matter to its successful conclusion.

Please feel free to call me at (303) 692-3362 if you have any questions regarding this letter.

Sincerely,

Walter Avramenko, Unit Leader  
Hazardous Waste Corrective Action Unit  
Compliance Program

RE: Glenwood Industrial, LLC  
Receipt of Completion Report  
EPA ID#COD981544786  
Project # 002GENV06ALL01

The Hazardous Materials and Waste Management Division of the Colorado Department of Public Health and Environment (the Department) acknowledges receipt of a document titled, "Results of Semiannual Groundwater Monitoring", dated April 21, 2000. This document was received in our office on April 24, 2000.

It has been determined that this document is a "Completion Report" pursuant to 6CCR 1007-3 §100.26. Therefore, it is estimated that the Department review will be completed within 30 days and will take no more than 40 hours. The proposed review completion date is May 18, 2000. Please refer any comments or questions to Walter Avramenko at (303)692-3362.

Sincerely,

Kathleen D. Wahlberg  
Program Analyst

RE: Voluntary Cleanup of Chromium Contamination  
EIMCO / Glenwood Industrial, LLC. Site  
2222 Deveruex Road, Glenwood Springs  
COD981544786

Dear Mr. Meiggs:

I have received your April 17, 2000 semiannual groundwater report in which sampling data are presented and the progress of the cleanup effort is discussed. A quick review of your report suggests that the recirculating anaerobic bioremediation system has converted the highly water soluble hexavalent chromium to insoluble trivalent chromium, thereby stabilizing the contamination and preventing continued leaching to groundwater at the Glenwood Springs facility.

On July 1, 1999 a new regulation went into effect to deal with cleanups similar to what was undertaken at Camelot Cleaners. A copy of this new regulation, 6 CCR 1007-3, Section 100.26, is included with this letter for your review. Considering our long involvement at the site and the all the documents currently contained within our files, I see no need for preparing a formal application to close this site under this new streamlined process. Before proceeding with a thorough review of the April 17, 2000 report, I ask that either you or your client prepare a short letter requesting that the Department review the report and approve its recommendation (no further action) under this corrective action plan rule. This letter should acknowledge that your client is requesting that the site be handled under the new rule and that the previously submitted documents be considered the required "application". The only other additional information requested is noted in 100.21(c)(1) and (2) of this rule. Without such a request and the deadlines the new rule imposes upon the review process, Unit staff who are reviewing other documents prepared under compliance orders, permits and this new rule may not be able to review your report in a timely manner.

Page Two  
EIMCO / Glenwood Industrial, LLC. Site  
April 21, 2000

Please feel free to call me at (303) 692-3362 if you have any questions regarding this letter or the new corrective action plan rule.

Sincerely,

A handwritten signature in black ink, appearing to read 'W. Avramenko', with a long horizontal flourish extending to the right.

Walter Avramenko, Unit Leader  
Hazardous Waste Cleanup Unit  
Compliance Program

(2) Permits issued under this section shall provide for construction of such facilities as necessary, and for operation of the facility for not longer than one year. Any permit may be renewed not more than three times. Each such renewal shall be for a period of not more than one year.

(d) The Department may order an immediate termination of all operations at the facility at any time it determines that termination is necessary to protect human health and the environment.

**§ 100.26 Corrective Action Plan.**

(a) The owner or operator of a hazardous waste facility that is subject to the corrective action or closure requirements of Part 264 or Part 265, but that does not currently have a treatment, storage or disposal permit, may submit an application for a Corrective Action Plan to conduct corrective action or closure. Applications for such permits may be for entire facilities or portions thereof.

(b) The Department shall review applications submitted under this section and shall provide formal written notification that a corrective action plan submitted to the Department under this section has been approved or disapproved. In the event the corrective action plan is not approved by the Department, the Department shall promptly provide the applicant with a written statement of the reasons for such denial. If the Department disapproves a corrective action plan based upon the applicant's failure to submit the information required by subsection (c), the Department shall notify the applicant of the specific information omitted by the applicant. The Department shall use its best efforts to:

(1) Complete the review of the initial application within sixty (60) days after submittal and spend no more than forty (40) hours to review simple corrective action plans and no more than one hundred (100) hours to review more complex corrective action plans;

(2) Complete the review of each separate report/plan submitted under a phased approach corrective action plan within sixty (60) days after submittal of such report/plan and spend no more than forty (40) hours to review such report/plan; and

(3) Complete the review of the completion report for an approved corrective action plan within thirty (30) days after submittal of such completion report and spend no more than twenty (20) hours to review such completion report.

(c) Applications for Corrective Action Plans under this section shall include, at a minimum, the following:

- (1) name(s) and address(es) of the owner and operator of the facility;
- (2) name and telephone number of the facility contact person for the application;
- (3) location of the facility;
- (4) EPA Identification Number of the facility;

- (5) description of historic uses and waste handling practices at the facility;
- (6) description of site characterization activities and type and extent of contamination identified to date, including a description of any hazardous waste or hazardous constituents; and
- (7) a Corrective Action Plan that either:

- (i) includes characterization data that describes fully the vertical and horizontal extent of contamination and either:

- (A) a remediation plan or

- (B) a request for no further action

- that is based on meeting state standards or risk-based cleanup goals; or

- (ii) provides for a phased approach to investigation of the full vertical and horizontal extent of contamination and cleanup of hazardous wastes and constituents, as necessary, based on state standards or risk-based cleanup goals.

(d) Corrective Action Plans approved under this section:

- (1) shall specify the date they become effective; .

- (2) shall specify actions the applicant must take to comply with the closure or corrective action requirements of Part 264 or 265, as appropriate, and a schedule for implementing such actions; and

- (3) may designate corrective action management units or temporary units under §§ 264.552 or 264.553, in accordance with § 100.21(e);

(e) Corrective Action Plans approved under this section are subject to the provisions of § 100.32.

(f) Corrective Action Plans approved under this section do not authorize any action that requires a permit under this Part for the treatment, storage, or disposal of hazardous waste.

(g) Corrective Action Plans approved under this section, and any determinations that the Department makes pursuant thereto, are requirements of Part 3 of the Act, and are subject to appeal pursuant to the provisions of § 25-15-305, C.R.S.

(h) Corrective Action Plans approved under this section do not excuse, nor constitute a defense to, any prior violation of the Act or the Regulations. Approval of a Corrective Action Plan under this section does not impair the Department's ability to take any other appropriate action (including issuing or modifying permits or orders) regarding releases of hazardous wastes or hazardous constituents that are not addressed in the Corrective Action Plan.

RE: Voluntary Cleanup of Chromium Contamination  
EIMCO / Glenwood Industrial, LLC. Site  
2222 Deveruex Road, Glenwood Springs  
COD981544786

Dear Mr. Meiggs:

I have reviewed your May 6, 1999 letter workplan which proposes to construct and operate a system to remediate chromium contaminated groundwater at the former EIMCO facility in Glenwood Springs, Colorado. Your plan proposes to use a recirculating anaerobic bioremediation system that will reduce the highly water soluble hexavalent chromium to insoluble trivalent chromium. My only comments to the plan are discussed in the paragraphs that follow.

1. You propose to continue sampling groundwater from monitoring wells on-site semi-annually. Considering that hexavalent chromium is water soluble and that fluids will be circulating through the suspected source area, it is possible that the start-up of the treatment system will initially mobilize some of the hexavalent chromium in the soil and carry it into the underlying aquifer. If this occurs, chromium concentrations in downgradient well MW-3 could conceivably increase until the necessary anaerobic conditions have been established after which concentrations should decline. I therefore recommend that groundwater samples be collected from MW-3 at least quarterly following system start-up, if not more frequently, to ensure that high levels of contamination are not released into the Colorado River alluvium where groundwater is expected to move quickly. More frequent monitoring of this sampling point should continue until groundwater travel times indicate that sufficient time has elapsed to have observed an effect at MW-3 and no major increases in chromium concentrations are observed in this well after fluids injected into the treatment/infiltration trench have had an opportunity to reach this well. Afterwards, MW-3 may be included in the semi-annual sampling program with the other wells.

May 20, 1999

EIMCO / Glenwood Industrial, LLC. Site

May 20, 1999

2. Data collected during the implementation of the workplan should be summarized in a report sent to me semi-annually, shortly after the collection of the semi-annual groundwater monitoring data. This report should evaluate the success of the treatment system to remediate both the source area and the groundwater.

3. A report summarizing all data collected at the site and the system's success at achieving the groundwater standard should be included with your no further action request.

Assuming that the comments noted above are incorporated into your proposal, I hereby approve the May 6, 1999 workplan and recommend that it be implemented as soon as is technically feasible.

Please feel free to call me at (303) 692-3362 if you have any questions regarding this letter or your proposed corrective action program, or simply wish to update me on the progress of cleanup activities.

Sincerely,

A handwritten signature in black ink, appearing to read 'Walter Avramenko', with a stylized, flowing script.

RE: Voluntary Cleanup of Chromium Contamination  
EIMCO / Glenwood Industrial, LLC. Site  
2222 Deveruex Road, Glenwood Springs  
**COD981544786**

Dear Mr. Meiggs:

I have reviewed your May 6, 1999 letter workplan which proposes to construct and operate a system to remediate chromium contaminated groundwater at the former EIMCO facility in Glenwood Springs, Colorado. Your plan proposes to use a recirculating anaerobic bioremediation system that will reduce the highly water soluble hexavalent chromium to insoluble trivalent chromium. My only comments to the plan are discussed in the paragraphs that follow.

1. You propose to continue sampling groundwater from monitoring wells on-site semi-annually. Considering that hexavalent chromium is water soluble and that fluids will be circulating through the suspected source area, it is possible that the start-up of the treatment system will initially mobilize some of the hexavalent chromium in the soil and carry it into the underlying aquifer. If this occurs, chromium concentrations in downgradient well MW-3 could conceivably increase until the necessary anaerobic conditions have been established after which concentrations should decline. I therefore recommend that groundwater samples be collected from MW-3 at least quarterly following system start-up, if not more frequently, to ensure that high levels of contamination are not released into the Colorado River alluvium where groundwater is expected to move quickly. More frequent monitoring of this sampling point should continue until groundwater travel times indicate that sufficient time has elapsed to have observed an effect at MW-3 and no major increases in chromium concentrations are observed in this well after fluids injected into the treatment/infiltration trench have had an opportunity to reach this well. Afterwards, MW-3 may be included in the semi-annual sampling program with the other wells.

May 20, 1999

EIMCO / Glenwood Industrial, LLC. Site

May 20, 1999

2. Data collected during the implementation of the workplan should be summarized in a report sent to me semi-annually, shortly after the collection of the semi-annual groundwater monitoring data. This report should evaluate the success of the treatment system to remediate both the source area and the groundwater.

3. A report summarizing all data collected at the site and the system's success at achieving the groundwater standard should be included with your no further action request.

Assuming that the comments noted above are incorporated into your proposal, I hereby approve the May 6, 1999 workplan and recommend that it be implemented as soon as is technically feasible.

Please feel free to call me at (303) 692-3362 if you have any questions regarding this letter or your proposed corrective action program, or simply wish to update me on the progress of cleanup activities.

Sincerely,

A handwritten signature in black ink, appearing to read 'Walter Avramenko', with a stylized, flowing script.

RE: Status of Groundwater Sampling and Installation of an Additional Monitoring Well  
Eimco Coal Machinery, Inc.  
2222 Devereux Road, Glenwood Springs, CO  
EPA ID# COD 98 154 4786

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division (the Division), has reviewed the June 21, 1996 document titled "Status of Groundwater Sampling and Installation of an Additional Monitoring Well" submitted by Envirosearch International in Eimco's behalf. This document is a response to the June 3, 1996 letter from the Division.

Based upon the documented trends of the ground water flow beneath this facility, it does not appear that the proposed monitor well location for MW-5 would be down-gradient of MW-3. MW-3 has consistently shown the highest levels of chromium concentrations in the ground water. In order to determine if the ground water contamination is leaving the site, MW-5 should be installed down-gradient of and to the north/northwest of MW-3. Possibly, about 50 feet east of the proposed location, just outside the approximate leach field boundary. The exact location of the monitor well may be determined in the field based upon the site logistics.

The Division also recommends that a water sample be collected for analysis from the new monitor well, MW-5, after installation and development in addition to being included in the semi-annual ground water sampling to be conducted in December. This additional information may hasten the Division's determination concerning the possibility of an off-site ground water impact. The sample analysis should follow the same guidelines as the previously approved quarterly ground water sampling plan.

Eimco Coal Machinery, Inc. should prepare and submit a response to the comments above within 15 days of receipt of this letter.

Mr. Pos

RE: Status Report of Groundwater Sampling  
Eimco Coal Machinery, Inc.  
2222 Devereux Road, Glenwood Springs, CO  
EPA ID# COD 98 154 4786

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division (the Division), has reviewed the May 13, 1996 document entitled "Status Report of Groundwater Sampling" submitted by Envirosearch International in Eimco's behalf. This document includes data from the March 14, 1996 sampling of the existing four monitor wells at the site.

As discussed with Craig Scola of Envirosearch on May 22, 1996, the Division agrees that sufficient ground water sampling data has been obtained to reduce the sampling frequency to semi annually. Based upon the results of the sampling completed to date, the most beneficial months to collect future ground water samples would be June and December. The sampling should continue to be conducted as approved under the quarterly ground water sampling plan and should continue to include the measurement of ground water elevations at the time of sampling.

The quarterly ground water sampling data has continued to show seasonally high concentrations of dissolved chromium in the most downgradient well, MW-3. Due to the fact that the levels of ground water contamination have not been reduced by the remediation of the sump area, the Division recommends that an additional monitor well should be installed down gradient of MW-3 in order to evaluate the impact of or potential for impact on off-site ground water. The monitor well should be installed as far downgradient from the site as is physically possible. The purpose of this well would be to determine if the chromium contamination in excess of the allowable state standard has continued off-site in the direction of the river, or if it is contained on-site.

The off-site monitor well should also be included in the semi-annual ground water sampling events completed following its installation.

Mr. Pos

RE: Report of Former Chromium Plating Pit Excavation Activities and Subsequent Groundwater Monitoring  
Eimco Coal Machinery, Inc.  
EPA ID# COD 98 154 4786

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division of the Colorado Department of Health (the Division), has reviewed the March 29, 1994 report entitled "Report of Former Chromium Plating Pit Excavation Activities and Subsequent Groundwater Monitoring" submitted by Envirosearch International in Eimco's behalf. This report includes data from the former chromium plating pit excavation and the resampling of the four on-site monitor wells. The Division has the following comments on the investigation report:

1. All five confirmation soil samples collected following the pit excavation showed levels of total chromium below 100 ppm. The Division is of the opinion that the contaminated soil with the potential of being a threat to local groundwater has been remediated. Unless we receive evidence to the contrary, no further action is required by the Division with regard to the soil around this former pit.
2. Following discussions with Eric Silco of Envirosearch, it has been determined that the latest groundwater samples were analyzed for total metals instead of dissolved metals. Therefor, these results do not really reflect the current contaminant levels with respect to the state regulatory standard of 50 ppb for dissolved chromium. Based on this information, Mr. Silco has proposed to complete the next quarterly sampling event in mid-May in order to continue to monitor the groundwater quality at this facility. The Division concurs with this decision and will continue to evaluate the results of this groundwater monitoring program in order to determine if further remediation activities will be required. A report of the field procedures and laboratory results should be submitted to the Division within 30 days of the sampling event.

All sample generation and handling protocols should be followed as outlined in the original Site Assessment Quality Assurance Project Plan.

Mr. Pos

RE: Status Report of Groundwater Sampling  
Eimco Coal Machinery, Inc., 2222 Devereux Road, Glenwood Springs  
EPA ID# COD 98 154 4786

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division (the Division), has reviewed the January 30, 1996 report entitled "Status Report of Groundwater Sampling" submitted by Envirosearch International on Eimco's behalf. This report includes data from the resampling of the existing four monitor wells at the site.

The Division has the following comments on the sampling report:

- The chain-of-custody form for the sampling event was not included in the report. Please submit a copy of the form with all of the appropriate signatures.
- Map 2 of the report shows the ground-water flow direction and ground-water elevations for this sampling event. The report does not include the actual depth to ground-water measurements and casing elevations for each well from which the ground-water elevations were calculated. Please submit a table containing this information for at least the past four sampling events.

Within 30 days of the receipt of this letter, please submit the above requested information. The quarterly ground-water sampling should continue as proposed in the sampling report.

Mr. Pos

RE: Status Report of Groundwater Sampling  
Eimco Coal Machinery, Inc.  
2222 Devereux Road, Glenwood Springs, CO  
**EPA ID# COD 98 154 4786**

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division (the Division), has reviewed the June 23, 1994 report entitled "Status Report of Groundwater Sampling" submitted by Envirosearch International in Eimco's behalf. This report includes data from the resampling of the existing four monitor wells at the site. The Division has the following comments on the investigation report and on the proposed groundwater monitoring plan:

## INVESTIGATIVE METHODOLOGY - Ground Water Sampling

The aforementioned report stated that "a distinct mappable groundwater flow direction could not be drawn utilizing the water level measurements provided by Huntingdon Chen-Northern" from the May 11, 1994 sampling event. Please submit the actual groundwater elevations reported by Chen-Northern to the Division for review. Also, submit any quality control data generated by the laboratory which analyzed the samples collected on May 11, 1994.

A review of boring logs for this site shows that the monitor wells were completed in the water bearing zone which consists of boulders with sand and silt to at least a depth of 52 feet. Has any information been collected to indicate at what depth some type of confining layer might be reached so as to determine the thickness of this aquifer? Also, please submit a log of borehole and well construction for MW-4.

## ANALYTICAL RESULTS - Groundwater Sampling

The analytical report for the June 9, 1994 samples provided in Attachment 1 includes a report for sample ID EIMCO/MW-5. Was this a duplicate sample collected from MW-3?

## INVESTIGATION CONCLUSIONS

The Division agrees that quarterly sampling of the groundwater should continue (as stated in the June 10, 1993 letter from the Division) in order to evaluate the effectiveness of the source area remediation. The next sampling event should be completed as soon as possible and would fulfill the requirement of the next quarterly sampling. The most recent increase in chromium levels in MW-3 could be a result of the disturbance of the contaminated soils in the source area during the recent remediation. If the chromium levels in MW-3 do not begin to decrease in the upcoming sampling events, an additional monitoring well may need to be installed downgradient of MW-3 to evaluate the impact of the on-site groundwater contamination to the river.

Mr. Pos

RE: Addendum # One Site Assessment Report  
Eimco Coal Machinery, Inc.  
EPA ID# COD 98 154 4786

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division of the Colorado Department of Health (the Division), has reviewed the June 7, 1993 report entitled "Addendum # One Site Assessment Report" submitted by Envirosearch International in Eimco's behalf. This report includes data from the installation of a fourth monitor well at the facility and the resampling of the existing three monitor wells. The report also presents remedial recommendations for the former chromium plating pit. The Division has the following comments on the investigation report and on the proposed remediation:

1. Section 3.0 Analytical Results

The federal maximum contaminant level for chromium in drinking water of 100 ppb, referenced in this section, does not apply due to the lower state regulatory standard of 50 ppb for dissolved chromium in groundwater. The report also assumes the hexavalent chromium result in MW-3 to be 41 ppb instead of the reported laboratory result of 61 ppb. In a discussion with the laboratory, it was stated that the notation on their report that the hexavalent chromium result "is probably lower than 0.061 due to cloudiness of sample during analysis" was incorrect because in checking the analyst's records, no cloudiness for that sample was recorded. In fact, a 1:2 dilution of the sample was required for analysis due to the concentration of color developed during analysis. In any event, the dissolved chromium and hexavalent chromium results on MW-3 are very close to the regulatory limit of 50 ppb for groundwater.

2. Section 5.0 Remedial Recommendations

In addition to the proposed excavation of the concrete floor and three of the cinder

Mr. Hal J. Pos  
June 10, 1993  
Page 2

block walls, some confirmation samples will need to be taken. The Division recommends that one soil sample be taken from each of these four locations. These should not be composite samples, but point samples centrally located in each wall and the floor sample should be taken underneath the sump after removal. These samples are needed to verify the concentration levels of chromium which will remain in the soil.

Due to the increasing levels of dissolved chromium reported in MW-3, the Division will require quarterly monitoring of the groundwater at this facility for at least one year. All four monitor wells should be samples every three months. A report of the field procedures and laboratory results should be submitted to the Division within 30 days of the sampling event.

All sample generation and handling protocols should be followed as outlined in the original Site Assessment Quality Assurance Project Plan.

The Division agrees with the goals and methods contained within the remediation plan and recommends that the plan be implemented as soon as technically feasible. This approval is contingent upon the incorporation of the above comments and recommendations in the plan. Within 15 days of receipt of this letter, Eimco Coal Machinery, Inc. should prepare a letter outlining how it will modify the plan to address the Division's concerns and incorporate the recommended changes.

If you have any questions of a technical nature please contact Sheila Gaston, of the Division, at (303) 692-3332. Questions of a legal nature should be directed to Daniel Miller, of the Office of the Attorney General, at (303) 866-5129.

RE: Eimco Coal Machinery, Inc.

EPA ID# COD981544786

Response to March 31, 1993 proposal for Decontamination of Former Plating Pit

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division of the Colorado Department of Health (the Division), has reviewed the March 31, 1993 document entitled "Decontamination of Former Plating Pit At The Eimco Coal Machinery Facility, Glenwood Springs, Colorado" submitted by EnviroSearch in Eimco's behalf. This document discusses the proposed scope of work to decontaminate the former chrome plating pit located at the aforementioned facility. The Division agrees with the workplan proposed in this document with the following additions/revisions:

### 1. Task 1 Pit Decontamination

The final rinse water from the steam cleaning of the plating pit should be tested for total chromium to aid in the determination of "clean" for the pit. If total chromium analytical results are elevated in this rinse water, further cleaning may be necessary.

### 2. Task 2 Confirmation Sampling

The discussion of composited "solid" samples from three locations in the pit does not indicate how many subsamples will be included in each composite. This decision can highly effect the value of the resulting data. In order to identify specific locations of contamination, composite samples are not appropriate. If your are trying to determine if contamination is generally present over a large surface area, composites are appropriate as long as the number of subsamples is kept to a

April 19, 1993  
Eimco Coal Machinery, Inc.  
Page 2

minimum. Any elevated composite results, however, could mean that any one of the subsamples or all of them are contaminated. This could lead to resampling and retesting of each specific subsample location. Your sampling plan should specify the exact location of each sample to be taken and how each sample will be analyzed (separately or as part of a composite).

3. The actual decommissioning of the former chrome plating tank pit should not be performed until data from the decontamination process has been received, reviewed and approval is given by the Division.

All sample generation and handling protocols should be followed as outlined in the original Site Assessment Quality Assurance Project Plan.

We recommend that Eimco prepare and submit a response as to how these additions/revisions will be incorporated into the workplan to the Division for our review within 15 days of the receipt of this letter.

If you have any questions of a technical nature please contact Sheila Gaston, of the Division, at (303) 692-3332.

Sincerely,

A handwritten signature in dark ink, appearing to read "Walter Avramenko", with a long horizontal flourish extending to the right.

Project Plan

Dear Mr. Pos:

The Hazardous Materials and Waste Management Division of the Colorado Department of Health (the Division), has reviewed the January 22, 1993 document entitled "Addendum # One Site Assessment Quality Assurance Project Plan" submitted by Envirosearch International in Eimco's behalf. This report included historical information pertaining to potential sources of contamination at the facility and proposed additional investigative activities to be performed. The Division agrees with the workplan proposed in this report as follows:

1. Section 2.1 One additional monitoring well (MW-4) to be located as identified on Map A-1 of the report. The purpose of this monitoring well is to further investigate possible ground water contamination at the site and to gather more information for ground water flow determination. The monitor well will be analyzed at a minimum for total chromium and pH.
2. Section 2.2 Ground water samples will be collected from all existing wells on site and will be analyzed at a minimum for total chromium and pH.
3. Section 2.3 A sample of the septic tank contents will be collected and analyzed for total chromium.

RE: Eimco Coal Machinery, Inc.  
EPA ID #COD981544736  
Response to October 2, 1992 Site Assessment Report

Dear Mr. Pos:

The Colorado Department of Health, Hazardous Materials and Waste Management Division (the "Department") has received the October 2, 1992 Site Assessment Report for the Eimco Coal Machinery, Inc. ("Eimco") facility in Glenwood Springs, which you submitted on Eimco's behalf. The report summarized soil and groundwater data obtained during an investigation of contamination associated with Eimco's former chrome plating pit. The Department has the following comments regarding the report:

### Pit/Sump Area:

In section 6.0 of the report, two courses of action are proposed for the site: 1) the cleaning and backfilling of the plating pit area and 2) the continued monitoring of groundwater with the newly installed wells for one year. Regarding the cleaning of the sump area, we were under the impression that all residues had already been removed from the pit/sump area. Since this is apparently not the case, we strongly recommend that all residues be removed, and the area steam cleaned as soon as possible. Of course, any residues, wash water or other wastes must be adequately characterized and disposed in compliance with the Colorado Hazardous Waste Regulations. Regarding the backfilling of the pit/sump area with gravel and lime, we do not believe this is a wise course of action since the area has not yet been adequately characterized. At this point, it is not clear from the data available that the concrete of which the pit/sump is composed does not itself exhibit a hazardous waste characteristic and/or is not still acting as source of contamination to the surrounding soil and groundwater. In addition, soil sample 2C (taken at the 6' interval) was found to contain significantly elevated levels of chromium (101 mg/kg) which appear to be increasing with depth. Also, the East floor sample taken in Feb 1992, shows elevated levels of chromium (220 mg/kg). Considering these elevated levels and also considering that the walls of the pit are constructed of

Page 2  
Mr. Hal J. Pos

cinder block, the concrete and soils underneath and around the pit may still be acting as a source of contamination. Although we are aware of the practical difficulties associated with further sampling in the pit area, it is important to fully delineate the extent of contamination around and underneath the pit area.

#### Monitoring Wells:

Regarding the monitoring of the groundwater in the area, we do not believe that the wells installed have yielded enough information to accurately determine the direction of groundwater flow or to verify whether the aquifer is or is not unacceptably contaminated. First of all, MW-1 is showing the highest level of contamination and thus does not appear to accurately represent background conditions at the site. Secondly, due to the proximity of the Colorado River to the site it seems likely that groundwater flow may have a more westerly component than is indicated in the report. Thirdly, all three wells are aligned along a straight line making it virtually impossible to determine the direction of groundwater flow. Therefore, an additional well placed due west of the pit area and another background well placed further upgradient would triangulate the area and help to better characterize groundwater flow direction.

#### Other Possible Source Areas:

During previous site inspections of Eimco by the Department, it was noted that the area around MW-1 often served as a storage area for used oil, automotive batteries, used equipment, etc. Therefore it seems feasible that chromium containing materials may have also been located in this area at some time and that perhaps MW-1 is actually located in an area of contamination instead of in a background area. Previous inspections also indicate that Eimco used a 750 gallon underground storage tank to collect used oil. This tank also collected drainage from the floor drains in the shop area. Although our records do not specify the location of this underground storage tank, it appears to have been located east of the Eimco building and may be impacting MW-1 results. We suggest that Eimco further investigate the location of this tank and the possibility of chromium materials having been stored near MW-1.

In addition we have noted that MW-3 (14 ppb chromium) is located in the general proximity of Eimco's former septic tank for domestic waste. Since Eimco had no connection to a POTW during the time it occupied the Devereux Road site and ran their chrome plating operations, the septic system and any associated leachfield warrants further careful investigation. Such investigation should include acquiring an accurate history of the septic system, location of the leach field, sampling of the septic tank contents and sampling of soils in leachfield area.

Page 3  
Mr. Hal J. Pos

Summary:

The Department recommends that Eimco do the following in order to further evaluate soil and groundwater contamination at this site:

1. Prepare a soil investigation workplan to fully characterize contamination found around the former chromium plating tank pit. The sampling data shows that the soils in the vicinity of the pit are contaminated with chromium. The plan should also address whether or not the concrete walls and floor of the pit are hazardous waste (for example, characteristic for chromium).
2. Prepare a ground-water sampling workplan whose goal will be to accurately determine the direction of ground water flow and to fully characterize local water quality. The sampling data indicates that a release has impacted the underlying aquifer. Additional wells are needed upgradient of MW-1 and downgradient of the former plating pit area.
3. Prepare a workplan to characterize soil contamination around the used oil underground storage tank, septic tank and associated leachfield. The purpose of this sampling is to evaluate whether these three waste management units are impacting water quality in the underlying aquifer.

We recommend that Eimco prepare and submit these plans to the Department for our review and approval within 30 days of receipt of this letter. The plans should specify sampling locations, equipment, and analytical methods that will be employed to characterize this contamination. A decision to close the plating tank pit and monitor the ground water can only be made after the magnitude and full extent of the contamination is fully known.

We appreciate Eimco's efforts in dealing with the issue of chromium contamination at this site. The Department usually conducts site investigation/remediation activities such as these under an administrative order on consent, signed by the Department and the facility. However, if work proceeds satisfactorily, as it has to date at the Eimco site, we hope to avoid this step in our management of this case.

BEFORE THE HAZARDOUS MATERIALS AND WASTE MANAGEMENT DIVISION

DEPARTMENT OF HEALTH

STATE OF COLORADO

\*\*\*\*\*  
COMPLIANCE ORDER ON CONSENT NO. 92-04-15-01

\*\*\*\*\*  
IN THE MATTER OF EIMCO COAL MACHINERY, INC.

\*\*\*\*\*  
This Compliance Order on Consent is entered into by the Colorado Department of Health through the Hazardous Materials and Waste Management Division ("the Division") and by Eimco Coal Machinery, Inc. ("Eimco").

Findings of Fact

1. Eimco is a Delaware corporation doing business at 2222 Devereux Road in Glenwood Springs, Colorado.
2. Eimco formerly operated under the name "Baker Mine Service" which was owned by Baker International. The current general manager of Eimco is Mr. Jack Van Hoose.
3. Eimco manufactures and services machinery used in the coal mining industry. Eimco's operations involve mechanical repair, machining of various metals, painting and chrome plating.
4. On September 7, 1990, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
5. During the 1990 inspection, inspectors observed Eimco's chrome plating operation. The tanks for the plating line were positioned in a concrete vault constructed below the floor level of the building. A grate was positioned over the vault and around the tanks to serve as a walking surface. The inspectors observed that liquid was pooled in the bottom of the vault.
6. During the 1990 inspection, Mr. Van Hoose stated that Eimco does not have service to a publicly owned treatment works (POTW). Therefore, according to Mr. Van Hoose, no wastewater from the chrome plating operation leaves Eimco via the POTW. Mr. Van Hoose stated that instead, rinses are reused as makeup water for the plating baths and all spilled material accumulates in the vault underneath the tanks.
7. During the 1990 inspection, inspectors observed a circular tank of approximately 300-400 gallon capacity, located next to the chrome plating area, filled approximately one-half full with an orange brown liquid. Mr. Van Hoose stated that the material was waste which had been pumped from the vault several years ago when snowmelt had seeped into the vault through the concrete walls and combined with plating wastes already in the vault. Mr. Kevin Wakefield, Eimco's chrome plating operator, stated that the previous chrome plating operator had "treated" the waste pumped from the vault and that an additional three barrels of treated waste was being stored outside. Mr. Wakefield stated that he had been Eimco's chrome plating operator for three years, as of the date of the 1990 inspection.
8. During the 1990 inspection, inspectors asked Mr. Wakefield how often the vault is pumped. Mr. Wakefield replied that he had never pumped it in his three years at Eimco as the chrome plating operator.
9. During the 1990 inspection, inspectors requested documentation of lab analysis for the chromium waste stored in the tank and drums. Eimco responded by forwarding a copy of a November 20, 1989 laboratory report, for samples marked "waste barrels", which showed that the chromium concentration in the liquid sample was 480 mg/l.

10. On August 11, 1989, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
11. During the 1989 inspection, inspectors observed two 55-gallon drums which Mr. Van Hoose stated were partially full of waste chromium sludge. According to Mr. Van Hoose, the sludge was generated from filtering liquid which was pooled in the vault below the plating tanks. Mr. Van Hoose stated that the vault had to be pumped because snowmelt had seeped through the vault the previous winter. The inspectors observed liquid in the vault during the 1989 inspection.
12. During the 1990 inspection, inspectors asked Mr. Van Hoose if any waste generated by Eimco had ever been sent off-site for disposal under a hazardous waste manifest. He replied that no waste had. During the 1990 inspection the inspectors asked Mr. Van Hoose if the chromium waste present during the 1989 inspection had been disposed. Mr. Van Hoose stated that he had been trying to arrange for disposal of the waste but the waste was still on site.
13. Eimco does not have a hazardous waste permit issued either by the Division or by the U.S. Environmental Protection Agency and has never been granted interim status for the treatment, storage or disposal of hazardous waste. Eimco has never notified the Division of hazardous waste activity pursuant to 6 CCR 1007-3, Part 99.
14. On or about November 10, 1986, Baker Mine Service notified the Division that it was a generator of ignitable waste and EP Toxic waste. Baker Mine Service ran a similar if not identical operation to Eimco's Baker Mine Service operator out of the same building from which Eimco currently operates (2222 Devereux Road, Glenwood Springs, Colorado).

#### Conclusions of Law

15. A solid waste includes any material which is accumulated, stored, or treated before or in lieu of being abandoned by being disposed, burned or incinerated. 6 CCR 1007-3, Section 261.2(b)(3). Eimco's chromium waste is a solid waste because it is being stored prior to disposal.
16. A solid waste is a hazardous waste if it exhibits any of the characteristics of hazardous waste as defined in 6 CCR 1007-3, Part 261, Subpart C or if it is listed in 6 CCR 1007-3, Part 261, Subpart D. 6 CCR 1007-3, Section 261.3(a).
17. Wastewater treatment sludges from electroplating operations are listed as hazardous wastes with the hazardous waste number F006. 6 CCR 1007-3, Section 261.31. "Sludges" are defined as any solid, semi-solid or liquid waste generated from municipal, commercial or industrial wastewater treatment plant. 6 CCR 1007-3, Section 260.10. The wastes in the 300-400 gallon tank and the 55 gallon drums described in paragraph #7 of this Order on Consent were wastewaters, derived from Eimco's chrome plating operation, which had been treated. These wastes thus are listed wastewater treatment sludges with the hazardous waste number F006.
18. If a conditionally exempt small quantity generator of hazardous waste accumulates more than a total of 1000 kg of hazardous waste on site it becomes subject to the requirements applicable to generators of 100-1000 kg of hazardous waste per month. 6 CCR 1007-3, Section 261.5. Eimco's accumulation of one-half of a 300 gallon container plus three 55-gallon drums of EP toxic chromium waste exceeds this threshold, and makes it subject to the requirements for generators of 100-1000 kg of hazardous waste per month.

Page Three  
Compliance Order on Consent  
Eimco Coal Machinery, Inc.

19. A generator of 100-1000 kg of hazardous waste per month may accumulate hazardous waste on site without a permit for a maximum of 180 days. 6 CCR 1007-3, Section 262.34(d). Eimco's storage of hazardous waste on site for over one year (from at least August 11, 1989 to at least September 7, 1990) without a hazardous waste permit or interim status is a violation of Section 25-15-308(1)(b), C.R.S. (1989).

ORDER ON CONSENT

Based on the foregoing Findings of Fact and Conclusions of Law, and pursuant to Section 25-15-308, C.R.S. (1989), Eimco is hereby ordered and consents to comply with the following:

20. Manage all containers and tanks of hazardous waste as specified in 6 CCR 1007-3, Section 262.34(d) and 6 CCR 1007-3, Part 265, Subpart I (if the waste is placed in containers) or the applicable portions of 6 CCR 1007-3, Part 265, Subpart J (if the waste is placed in tanks).

PENALTIES

21. In full accord and satisfaction of the alleged violations described in this Compliance Order on Consent, Eimco agrees to pay the sum of \$17,100.00 in civil penalties. Payment is due within thirty (30) days of the effective date of this Compliance Order on Consent by certified or cashier's check drawn to the order of "Colorado Department of Health" and delivered to the Hazardous Materials and Waste Management Division at 4210 East 11th Avenue, Denver, Colorado 80220.
22. Without any admission of liability, Eimco hereby consents to issuance of this Compliance Order on Consent and agrees to abide by all of the terms and conditions herein. Eimco understands that violation of this Compliance Order on Consent may subject Eimco to legal action for injunctive relief and for penalties in accordance with Sections 25-15-308(2) and 25-15-309, C.R.S. (1989).

SCOPE AND EFFECT OF AGREEMENT

23. The parties' obligations under this Compliance Order on Consent are limited to the matter expressly stated in the Compliance Order on Consent. Eimco is signing this Compliance Order on Consent to compromise a claim and, as such, the admissibility of this Compliance Order on Consent shall be governed by Colorado and Federal Rules of Evidence 408.
24. In exchange for Eimco's compliance with the provisions of this Compliance Order on Consent and payment of civil penalties, the Department agrees not to initiate any administrative or civil proceedings against Eimco, its officers, directors, agents, servants, employees, attorneys, and all affiliated corporate entities, successors and assigns, past and present, based on facts arising out of or related to this Compliance Order on Consent or other facts currently known to the Department with respect to Eimco's illegal storage of hazardous waste as of the September 7, 1991 inspection. This release, however will not prevent the Department from enforcing the terms of this Compliance Order on Consent, and does not release Eimco from liability for future violations of state hazardous waste laws.

LIMITATION OF LIABILITY

25. The Department shall not be liable for any injury or damages to persons or property arising from acts or omissions of Eimco, its employees, agents or contractors in carrying out the activities pursuant to this Compliance Order on Consent. The Department shall not be considered a party to any contract entered into by Eimco its employees, agents or contractors in

carrying out the activities pursuant to this Compliance Order on Consent, nor shall it be considered an owner or operator of the Eimco facility.

NOTICES

26. Unless otherwise specified, reports, notices, submissions and communications required under this Compliance Order on Consent shall be in writing and shall be sent to:

RE: Hazardous Materials and Waste Management Division  
Compliance Order No. 91-03-26-02  
Offer to Compromise Regarding Civil Penalties

Dear Mr. Habets:

On March 26, 1991, Eimco Coal Machinery, Inc. ("Eimco") was served with a compliance order issued by the Hazardous Materials and Waste Management Division of the Colorado Department of Health ("the Division") pursuant to Section 25-15-308(2), C.R.S. (1989). The Division issued this order based upon its finding that Eimco had violated the Colorado Hazardous Waste Act ("the Act") by illegally storing hazardous waste.

Section 25-15-308(2) authorizes the Division to request that the Attorney General of Colorado bring suit for injunctive relief and for penalties pursuant to Sections 25-15-309 and 25-15-310, respectively. Section 25-15-309 provides that the court may assess and collect penalties of up to \$25,000 for each day of each violation of the Act and the regulation implementing the Act. This letter constitutes the Division's offer to compromise its judicial claims for civil penalties against Eimco in accordance with the following terms.

The Division has reviewed the information concerning the violations(s) available to it and has analyzed the seriousness of the violations(s), and the potential for harm. Based on these factors, the Division believes that a total penalty of \$17,100.00 is appropriate. The Division, therefore, will agree in writing to settle its claims against Eimco in exchange for: Eimco's signing of the enclosed compliance order on consent and delivery of a cashier's check or certified funds in the amount of \$17,100.00 (payable to the Colorado Department of Health) within 30 days of the effective date of the enclosed compliance order on consent. Please note that a revised Penalty Computation Worksheet is also enclosed.

Page Two  
Eimco Coal Machinery, Inc.

If you do not accept this offer to compromise, the Division may, without further notice, ask the Attorney general of Colorado to bring suit against Eimco for penalties and, if appropriate, injunctive relief pursuant to the Act. You should be aware that in such event the Division's request to the Court regarding the amount of penalties will not be bound or limited in any way by this offer to compromise.

Should you have any questions, please contact Lillian Gonzalez at (303) 331-4873. I believe that a speedy resolution of this matter is in the best interests of both Eimco and the people of Colorado.

This offer to compromise shall not be admissible to prove the validity for or invalidity of any claim or its amount pursuant to Colorado and Federal Rules of Evidence 408.

Sincerely,

A handwritten signature in black ink, appearing to read "Frederick R. Dowsett", with a stylized flourish at the end.

Frederick R. Dowsett, Unit Leader  
Monitoring & Enforcement  
Hazardous Materials & Waste Management Division

RE: Hazardous Materials and Waste Management Division  
Compliance Order No. 91-03-26-02  
Offer to Compromise Regarding Civil Penalties

Dear Mr. Habets:

On March 26, 1991, Eimco Coal Machinery, Inc. ("Eimco") was served with a compliance order issued by the Hazardous Materials and Waste Management Division of the Colorado Department of Health ("the Division") pursuant to Section 25-15-308(2), C.R.S. (1989). The Division issued this order based upon its finding that Eimco had violated the Colorado Hazardous Waste Act ("the Act") by illegally storing hazardous waste.

Section 25-15-308(2) authorizes the Division to request that the Attorney General of Colorado bring suit for injunctive relief and for penalties pursuant to Sections 25-15-309 and 25-15-310, respectively. Section 25-15-309 provides that the court may assess and collect penalties of up to \$25,000 for each day of each violation of the Act and the regulation implementing the Act. This letter constitutes the Division's offer to compromise its judicial claims for civil penalties against Eimco in accordance with the following terms.

The Division has reviewed the information concerning the violations(s) available to it and has analyzed the seriousness of the violations(s), and the potential for harm. Based on these factors, the Division believes that a total penalty of \$17,100.00 is appropriate. The Division, therefore, will agree in writing to settle its claims against Eimco in exchange for: Eimco's signing of the enclosed compliance order on consent and delivery of a cashier's check or certified funds in the amount of \$17,100.00 (payable to the Colorado Department of Health) within 30 days of the effective date of the enclosed compliance order on consent. Please note that a revised Penalty Computation Worksheet is also enclosed.

BEFORE THE HAZARDOUS MATERIALS AND WASTE MANAGEMENT DIVISION

DEPARTMENT OF HEALTH

STATE OF COLORADO

\*\*\*\*\*  
COMPLIANCE ORDER ON CONSENT NO. \_\_\_\_\_

\*\*\*\*\*  
IN THE MATTER OF EIMCO COAL MACHINERY, INC.

\*\*\*\*\*  
This Compliance Order on Consent is entered into by the Colorado Department of Health through the Hazardous Materials and Waste Management Division ("the Division") and by Eimco Coal Machinery, Inc. ("Eimco").

Findings of Fact

1. Eimco is a Delaware corporation doing business at 2222 Devereux Road in Glenwood Springs, Colorado.
2. Eimco formerly operated under the name "Baker Mine Service" which was owned by Baker International. The current general manager of Eimco is Mr. Jack Van Hoose.
3. Eimco manufactures and services machinery used in the coal mining industry. Eimco's operations involve mechanical repair, machining of various metals, painting and chrome plating.
4. On September 7, 1990, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
5. During the 1990 inspection, inspectors observed Eimco's chrome plating operation. The tanks for the plating line were positioned in a concrete vault constructed below the floor level of the building. A grate was positioned over the vault and around the tanks to serve as a walking surface. The inspectors observed that liquid was pooled in the bottom of the vault.
6. During the 1990 inspection, Mr. Van Hoose stated that Eimco does not have service to a publicly owned treatment works (POTW). Therefore, according to Mr. Van Hoose, no wastewater from the chrome plating operation leaves Eimco via the POTW. Mr. Van Hoose stated that instead, rinses are reused as makeup water for the plating baths and all spilled material accumulates in the vault underneath the tanks.
7. During the 1990 inspection, inspectors observed a circular tank of approximately 300-400 gallon capacity, located next to the chrome plating area, filled approximately one-half full with an orange brown liquid. Mr. Van Hoose stated that the material was waste which had been pumped from the vault several years ago when snowmelt had seeped into the vault through the concrete walls and combined with plating wastes already in the vault. Mr. Kevin Wakefield, Eimco's chrome plating operator, stated that the previous chrome plating operator had "treated" the waste pumped from the vault and that an additional three barrels of treated waste was being stored outside. Mr. Wakefield stated that he had been Eimco's chrome plating operator for three years, as of the date of the 1990 inspection.
8. During the 1990 inspection, inspectors asked Mr. Wakefield how often the vault is pumped. Mr. Wakefield replied that he had never pumped it in his three years at Eimco as the chrome plating operator.
9. During the 1990 inspection, inspectors requested documentation of lab analysis for the chromium waste stored in the tank and drums. Eimco responded by forwarding a copy of a November 20, 1989 laboratory report, for samples marked "waste barrels", which showed that the chromium concentration in the liquid sample was 480 mg/l.

10. On August 11, 1989, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
11. During the 1989 inspection, inspectors observed two 55-gallon drums which Mr. Van Hoose stated were partially full of waste chromium sludge. According to Mr. Van Hoose, the sludge was generated from filtering liquid which was pooled in the vault below the plating tanks. Mr. Van Hoose stated that the vault had to be pumped because snowmelt had seeped through the vault the previous winter. The inspectors observed liquid in the vault during the 1989 inspection.
12. During the 1990 inspection, inspectors asked Mr. Van Hoose if any waste generated by Eimco had ever been sent off-site for disposal under a hazardous waste manifest. He replied that no waste had. During the 1990 inspection the inspectors asked Mr. Van Hoose if the chromium waste present during the 1989 inspection had been disposed. Mr. Van Hoose stated that he had been trying to arrange for disposal of the waste but the waste was still on site.
13. Eimco does not have a hazardous waste permit issued either by the Division or by the U.S. Environmental Protection Agency and has never been granted interim status for the treatment, storage or disposal of hazardous waste. Eimco has never notified the Division of hazardous waste activity pursuant to 6 CCR 1007-3, Part 99.
14. On or about November 10, 1986, Baker Mine Service notified the Division that it was a generator of ignitable waste and EP Toxic waste. Baker Mine Service ran a similar if not identical operation to Eimco's Baker Mine Service operator out of the same building from which Eimco currently operates (2222 Devereux Road, Glenwood Springs, Colorado).

Conclusions of Law

15. A solid waste includes any material which is accumulated, stored, or treated before or in lieu of being abandoned by being disposed, burned or incinerated. 6 CCR 1007-3, Section 261.2(b)(3). Eimco's chromium waste is a solid waste because it is being stored prior to disposal.
16. A solid waste is a hazardous waste if it exhibits any of the characteristics of hazardous waste as defined in 6 CCR 1007-3, Part 261, Subpart C or if it is listed in 6 CCR 1007-3, Part 261, Subpart D. 6 CCR 1007-3, Section 261.3(a).
17. Wastewater treatment sludges from electroplating operations are listed as hazardous wastes with the hazardous waste number F006. 6 CCR 1007-3, Section 261.31. "Sludges" are defined as any solid, semi-solid or liquid waste generated from municipal, commercial or industrial wastewater treatment plant. 6 CCR 1007-3, Section 260.10. The wastes in the 300-400 gallon tank and the 55 gallon drums described in paragraph #7 of this Order on Consent were wastewaters, derived from Eimco's chrome plating operation, which had been treated. These wastes thus are listed wastewater treatment sludges with the hazardous waste number F006.
18. If a conditionally exempt small quantity generator of hazardous waste accumulates more than a total of 1000 kg of hazardous waste on site it becomes subject to the requirements applicable to generators of 100-1000 kg of hazardous waste per month. 6 CCR 1007-3, Section 261.5. Eimco's accumulation of one-half of a 300 gallon container plus three 55-gallon drums of EP toxic chromium waste exceeds this threshold, and makes it subject to the requirements for generators of 100-1000 kg of hazardous waste per month.

Page Three  
Compliance Order on Consent  
Eimco Coal Machinery, Inc.

19. A generator of 100-1000 kg of hazardous waste per month may accumulate hazardous waste on site without a permit for a maximum of 180 days. 6 CCR 1007-3, Section 262.34(d). Eimco's storage of hazardous waste on site for over one year (from at least August 11, 1989 to at least September 7, 1990) without a hazardous waste permit or interim status is a violation of Section 25-15-308(1)(b), C.R.S. (1989).

ORDER ON CONSENT

Based on the foregoing Findings of Fact and Conclusions of Law, and pursuant to Section 25-15-308, C.R.S. (1989), Eimco is hereby ordered and consents to comply with the following:

20. Manage all containers and tanks of hazardous waste as specified in 6 CCR 1007-3, Section 262.34(d) and 6 CCR 1007-3, Part 265, Subpart I (if the waste is placed in containers) or the applicable portions of 6 CCR 1007-3, Part 265, Subpart J (if the waste is placed in tanks).

PENALTIES

21. In full accord and satisfaction of the alleged violations described in this Compliance Order on Consent, Eimco agrees to pay the sum of \$17,100.00 in civil penalties. Payment is due within thirty (30) days of the effective date of this Compliance Order on Consent by certified or cashier's check drawn to the order of "Colorado Department of Health" and delivered to the Hazardous Materials and Waste Management Division at 4210 East 11th Avenue, Denver, Colorado 80220.
22. Without any admission of liability, Eimco hereby consents to issuance of this Compliance Order on Consent and agrees to abide by all of the terms and conditions herein. Eimco understands that violation of this Compliance Order on Consent may subject Eimco to legal action for injunctive relief and for penalties in accordance with Sections 25-15-308(2) and 25-15-309, C.R.S. (1989).

SCOPE AND EFFECT OF AGREEMENT

23. The parties' obligations under this Compliance Order on Consent are limited to the matter expressly stated in the Compliance Order on Consent. Eimco is signing this Compliance Order on Consent to compromise a claim and, as such, the admissibility of this Compliance Order on Consent shall be governed by Colorado and Federal Rules of Evidence 408.
24. In exchange for Eimco's compliance with the provisions of this Compliance Order on Consent and payment of civil penalties, the Department agrees not to initiate any administrative or civil proceedings against Eimco, its officers, directors, agents, servants, employees, attorneys, and all affiliated corporate entities, successors and assigns, past and present, based on facts arising out of or related to this Compliance Order on Consent or other facts currently known to the Department with respect to Eimco's illegal storage of hazardous waste as of the September 7, 1991 inspection. This release, however will not prevent the Department from enforcing the terms of this Compliance Order on Consent, and does not release Eimco from liability for future violations of state hazardous waste laws.

LIMITATION OF LIABILITY

25. The Department shall not be liable for any injury or damages to persons or property arising from acts or omissions of Eimco, its employees, agents or contractors in carrying out the activities pursuant to this Compliance Order on Consent. The Department shall not be considered a party to any contract entered into by Eimco its employees, agents or contractors in

carrying out the activities pursuant to this Compliance Order on Consent, nor shall it be considered an owner or operator of the Eimco facility.

NOTICES

26. Unless otherwise specified, reports, notices, submissions and communications required under this Compliance Order on Consent shall be in writing and shall be sent to:

FOR THE STATE OF COLORADO

Frederick R. Dowsett, Unit Leader  
Hazardous Materials and Waste Management Division  
Colorado Department of Health

MODIFICATION

27. This Agreement may be modified in writing upon mutual agreement of the Parties.

TERMINATION DATE

28. This Compliance Order on Consent shall terminate three years after the effective date of this agreement.

COUNTERPARTS

29. This Compliance Order on Consent may be executed in multiple counterparts, each of which shall be deemed an original, but all of which shall constitute one and the same agreement.

BINDING EFFECT AND EFFECTIVE DATE

30. This Compliance Order on Consent is binding upon the parties to the Compliance Order on Consent and their corporate subsidiaries or parents. The undersigned warrant that they are authorized to legally bind their respective principals to this Compliance Order on Consent. This Compliance Order on Consent shall become effective when all required signatures have been obtained.

RE: Extension of Accumulation  
Period Under Colorado  
Hazardous Waste Regulations  
EPA ID# COD983785619

COD 98 154 4768

Dear Mr. Van Hoose:

This will confirm that we have received your March 9, 1992 request for an extension of the 90-day hazardous waste accumulation period.

Under authority granted to the Department by 6 CCR 1007-3, part 262.34(b), you have been granted a 30-day extension to the 90-day accumulation period. This 30-day extension ends on April 10, 1992. Since the regulations do not provide for any additional extensions, you are advised to take steps to properly dispose of the material as a hazardous waste within the extension period. As confirmation of such, please forward a copy of the manifest to the Department within 10 days of shipping the waste.

If you have any questions or if any further problems arise, please contact Lillian Gonzalez at (303) 331-4873.

Sincerely,

Frederick R. Dowsett, Unit Leader

Re: Hazardous Materials and Waste Management Division  
Compliance Order No. 91-03-26-02  
Record of Informal Conference  
- and -  
Service of Amended Compliance Order

Dear Mr. Van Hoose:

On behalf of the Hazardous Materials and Waste Management Division of the Colorado Department of Health ("the Division"), I would like to thank you and Eimco Coal Machinery, Inc. ("Eimco") for taking time to meet informally with the Division on April 9, 1991 to discuss the violation of the Colorado Hazardous Waste Act described in Compliance Order No. 91-03-26-02. This letter summarizes our informal conference and articulates the Division's final position with regard to this case.

Compliance Order No. 91-03-26-02 contains the Division's findings that Eimco violated the Colorado Hazardous Waste Act by storing hazardous wastes on site in excess of the allowable time periods. At the informal conference you indicated that the wastes cited in the order had either been sent to an authorized hazardous waste facility or is scheduled for disposal in the near future. You also indicated that an updated notification of hazardous waste activity had been submitted to the Department. My staff and I have reviewed the case, including the information offered at the conference.

Based upon this information, the Division has concluded that the Compliance Order should be revised to reflect the information you submitted. The Division, therefore, withdraws Compliance Order No. 91-03-26-02 and in its place, hereby serves you with Amended Compliance Order No. 91-03-26-02. This Amended Compliance Order contains the Division's final factual determinations in this matter. The enclosed Amended Compliance Order will become effective ten (10) calendar days after the date on which you receive this letter.

In addition, the Division encourages Eimco to investigate the integrity of their plating sump and ensure its contents do not pose a threat to human health or the environment. A leak test and application or reapplication of an impervious coating may be appropriate.

Mr. Jack Van Hoose  
Eimco Coal Machinery, Inc.  
Page Two

You are also hereby notified that the Division intends to seek a civil penalty from Eimco in this matter as authorized by Sections 25-15-308 and 309, C.R.S. (1989). You are being notified of the amount the Division would be willing to settle for, along with any conditions the offer would be subject to, by separate letter.

Should you desire to discuss the technical aspects of this matter, you may call Lillian Gonzalez at the Department of Health at (303) 331-4873. If you wish to discuss the legal aspects of this case, please contact Daniel Miller at the Colorado Attorney General's Office at (303) 620-4732.

I urge you to give this matter your immediate attention.

Sincerely,

Frederick R. Dowsett, Unit Leader  
Monitoring & Enforcement  
Hazardous Materials & Waste Management Division

BEFORE THE HAZARDOUS MATERIALS AND WASTE MANAGEMENT DIVISION  
DEPARTMENT OF HEALTH  
STATE OF COLORADO

\*\*\*\*\*

AMENDED COMPLIANCE ORDER      NO. 91-03-26-02

\*\*\*\*\*

IN THE MATTER OF EIMCO COAL MACHINERY, INC.

\*\*\*\*\*

This Compliance Order is issued by the Colorado Department of Health through the Hazardous Materials and Waste Management Division ("the Division") to Eimco Coal Machinery, Inc. ("Eimco") pursuant to the Division's authority under Section 25-15-308, C.R.S. (1989).

Findings of Fact

1. Eimco is a Delaware corporation doing business at 2222 Devereux Road in Glenwood Springs, Colorado.
2. Eimco formerly operated under the name "Baker Mine Service" which was owned by Baker International. The current general manager of Eimco is Mr. Jack Van Hoose.
3. Eimco manufactures and services machinery used in the coal mining industry. Eimco's operations involve mechanical repair, machining of various metals, painting and chrome plating.
4. On September 7, 1990, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
5. During the 1990 inspection, inspectors observed Eimco's chrome plating operation. The tanks for the plating line were positioned in a concrete vault constructed below the floor level of the building. A grate was positioned over the vault and around the tanks to serve as a walking surface. The inspectors observed that liquid was pooled in the bottom of the vault.
6. During the 1990 inspection, Mr. Van Hoose stated that Eimco does not have service to a publicly owned treatment works (POTW). Therefore, according to Mr. Van Hoose, no wastewater from the chrome plating operation leaves Eimco via the POTW. Mr. Van Hoose stated that instead, rinses are reused as makeup water for the plating baths and all spilled material accumulates in the vault underneath the tanks.

7. During the 1990 inspection, inspectors observed a circular tank of approximately 300-400 gallon capacity, located next to the chrome plating area, filled approximately one-half full with an orange brown liquid. Mr. Van Hoose stated that the material was waste which had been pumped from the vault several years ago when snowmelt had seeped into the vault through the concrete walls and combined with plating wastes already in the vault. Mr. Kevin Wakefield, Eimco's chrome plating operator, stated that the previous chrome plating operator had "treated" the waste pumped from the vault and that an additional three barrels of treated waste was being stored outside. Mr. Wakefield stated that he had been Eimco's chrome plating operator for three years, as of the date of the 1990 inspection.
8. During the 1990 inspection, inspectors asked Mr. Wakefield how often the vault is pumped. Mr. Wakefield replied that he had never pumped it in his three years at Eimco as the chrome plating operator.
9. During the 1990 inspection, inspectors requested documentation of lab analysis for the chromium waste stored in the tank and drums. Eimco responded by forwarding a copy of a November 30, 1989 laboratory report, for samples marked "waste barrels", which showed that the chromium concentration in the liquid sample was 480 mg/l.
10. On August 11, 1989, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
11. During the 1989 inspection, inspectors observed two 55-gallon drums which Mr. Van Hoose stated were partially full of waste chromium sludge. According to Mr. Van Hoose, the sludge was generated from filtering liquid which was pooled in the vault below the plating tanks. Mr. Van Hoose stated that the vault had to be pumped because snowmelt had seeped through the vault the previous winter. The inspectors observed liquid in the vault during the 1989 inspection.
12. During the 1990 inspection, inspectors asked Mr. Van Hoose if any waste generated by Eimco had ever been sent off-site for disposal under a hazardous waste manifest. He replied that no waste had. During the 1990 inspection the inspectors asked Mr. Van Hoose if the chromium waste present during the 1989 inspection had been disposed. Mr. Van Hoose stated that he had been trying to arrange for disposal of the waste but the waste was still on site.
13. Eimco does not have a hazardous waste permit issued either by the Division or by the U.S. Environmental Protection Agency and has never been granted interim status for the treatment, storage or disposal of hazardous waste.
14. On or about November 10, 1986, Baker Mine Service notified the Division that it was a generator of ignitable waste and EP Toxic waste. Baker Mine Service ran a similar if not identical operation to Eimco's. Baker Mine Service operated out of the same building from which Eimco currently operates (2222 Devereux Road, Glenwood Springs, Colorado).

#### Conclusions of Law

15. A solid waste includes any material which is accumulated, stored, or treated before or in lieu of being abandoned by being disposed, burned or incinerated. 6 CCR 1007-3, Section 261.2(b)(3). Eimco's chromium waste is a solid waste because it is being stored prior to disposal.

16. A solid waste is a hazardous waste if it exhibits any of the characteristics of hazardous waste as defined in 6 CCR 1007-3, Part 261, Subpart C or if it is listed in 6 CCR 1007-3, Part 261, Subpart D. 6 CCR 1007-3, Section 261.3(a).
17. Wastewater treatment sludges from electroplating operations are listed as hazardous wastes with the hazardous waste number F006. 6 CCR 1007-3, Section 261.31. "Sludges" are defined as any solid, semi-solid or liquid waste generated from municipal, commercial or industrial wastewater treatment plant. 6 CCR 1007-3, Section 260.10. The wastes in the 300-400 gallon tank and the 55 gallon drums described in paragraph #7 of this Order were wastewaters, derived from Eimco's chrome plating operation, which had been treated. These wastes thus are listed wastewater treatment sludges with the hazardous waste number F006.
18. If a conditionally exempt small quantity generator of hazardous waste accumulates more than a total of 1000 kg of hazardous waste on site it becomes subject to the requirements applicable to generators of 100-1000 kg of hazardous waste per month. 6 CCR 1007-3, Section 261.5. Eimco's accumulation of one-half of a 300 gallon container plus three 55-gallon drums of EP toxic chromium waste exceeds this threshold, and makes it subject to the requirements for generators of 100-1000 kg of hazardous waste per month.
19. A generator of 100-1000 kg of hazardous waste per month may accumulate hazardous waste on site without a permit for a maximum of 180 days. 6 CCR 1007-3, Section 262.34(d). Eimco's storage of hazardous waste on site for over one year (from at least August 11, 1989 to at least September 7, 1990) without a hazardous waste permit or interim status is a violation of Section 25-15-308(1)(b), C.R.S., (1989).

### ORDER

Based on the foregoing Findings of Fact and Conclusions of Law, and pursuant to Section 25-15-308, C.R.S. (1989), Eimco is hereby ordered to comply with the following:

20. Within 30 days of the effective date of this Order, Eimco must submit documentation that all hazardous wastes stored in excess of the allowable time limits have been sent off site to a facility which is authorized for the treatment, storage, or disposal of hazardous waste. The documentation must at least include all manifests, waste profiles, any additional reports of analyses and any other shipping paperwork. Eimco must also submit written verification that all future wastes generated will be managed according to the applicable portions of 6 CCR 1007-3. The applicable portions include, but are not limited to, those which specify storage time limits (6 CCR 1007-3, Section 262.34) and those which specify the proper management of hazardous waste containers and tanks (6 CCR 1007-3, Section 262.34(d); 6 CCR 1007-3, Part 265, Subparts I & J), including proper labeling.

NOTICE OF LIABILITY FOR CIVIL  
PENALTIES AND INJUNCTIVE RELIEF

Section 25-15-309, C.R.S. (1989), provides that any person who violates the Hazardous Waste Act, Sections 25-15-101 to 313, C.R.S. (1989), the regulations implementing the Act, 6 CCR 1007-3, or any compliance order of the Department of Health which is not subject to a stay pending judicial review, shall be subject to a civil penalty of not more than \$25,000 per violation for each day during which such violation occurs. The Colorado Department of Health may request that the Attorney General bring suit for injunctive relief or civil or criminal penalties or both for failure to comply with Section 25-15-308 and this Order.

NOTICE OF EFFECTIVE DATE OF ORDER

This Order shall become effective 10 days after receipt.

RE: Hazardous Materials & Waste Management Division  
**Eimco Coal Machinery Inc.**  
Compliance Order # 91-03-26-02  
- and -  
Invitation to Informal Conference

Dear Sir or Madam:

You are hereby served with Compliance Order No. 91-03-26-02 issued by the Hazardous Materials and Waste Management Division of the Colorado Department of Health ("the Division") pursuant to Section 25-15-308(2), C.R.S. (1989). This Order is based upon findings by the Division that Eimco Coal Machinery Inc. ("Eimco") has violated the Colorado Hazardous Waste Act, Sections 25-15-301 through 313, C.R.S. (1989) ("the Act"), as more particularly described in the enclosed Compliance Order.

Please take note that the Division will meet with you, at your request, after your receipt of this Order to discuss the Order and receive any evidence or arguments Eimco may have concerning the existence or gravity of the violation(s). I urge you to take advantage of the opportunity to discuss this matter with the Division. If you do not request a meeting, you are hereby notified that the enclosed Compliance Order will become effective ten (10) calendar days after the date on which you receive this letter.

You are also hereby notified that the Division intends to seek a civil penalty from Eimco in this matter as authorized by Sections 25-15-308 and 309 of the Act. The amount of the penalty will be influenced by a variety of factors including the seriousness of the violation(s), the potential for harm resulting from the violation(s) and the performance of Eimco in quickly complying with the terms of the enclosed Compliance Order. A copy of the penalty policy used by the Division will be made available to you upon request. The Act authorizes the Division to seek penalties of up to \$25,000 for each day of each violation of the Act, the regulations implementing the Act, or the enclosed Order.

The Corporation Company  
Page Two

Should you desire to schedule a meeting or to discuss the technical aspects of this matter, you may call Lillian Gonzalez at the Division (telephone (303) 331-4873). If you have retained legal counsel, he or she may contact Daniel S. Miller at the Colorado Attorney General's Office (telephone (303) 620-4732) to discuss legal aspects of the case.

I urge you to give this matter your immediate attention.

Sincerely,

Frederick R. Dowsett, Unit Leader  
Monitoring & Enforcement  
Hazardous Materials & Waste Management Division

BEFORE THE HAZARDOUS MATERIALS AND WASTE MANAGEMENT DIVISION  
DEPARTMENT OF HEALTH  
STATE OF COLORADO

\*\*\*\*\*

COMPLIANCE ORDER

NO. 91-03-26-02

\*\*\*\*\*

IN THE MATTER OF EIMCO COAL MACHINERY, INC.

\*\*\*\*\*

This Compliance Order is issued by the Colorado Department of Health through the Hazardous Materials and Waste Management Division ("the Division") to Eimco Coal Machinery, Inc. ("Eimco") pursuant to the Division's authority under Section 25-15-308, C.R.S. (1989).

Findings of Fact

1. Eimco is a Delaware corporation doing business at 2222 Devereux Road in Glenwood Springs, Colorado.
2. Eimco formerly operated under the name "Baker Mine Service" which was owned by Baker International. The current general manager of Eimco is Mr. Jack Van Hoose.
3. Eimco manufactures and services machinery used in the coal mining industry. Eimco's operations involve mechanical repair, machining of various metals, painting and chrome plating.
4. On September 7, 1990, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
5. During the 1990 inspection, inspectors observed Eimco's chrome plating operation. The tanks for the plating line were positioned in a concrete vault constructed below the floor level of the building. A grate was positioned over the vault and around the tanks to serve as a walking surface. The inspectors observed that liquid was pooled in the bottom of the vault.
6. During the 1990 inspection, Mr. Van Hoose stated that Eimco does not have service to a publicly owned treatment works (POTW). Therefore, according to Mr. Van Hoose, no wastewater from the chrome plating operation leaves Eimco via the POTW. Mr. Van Hoose stated that instead, rinses are reused as makeup water for the plating baths and all spilled material accumulates in the vault underneath the tanks.

7. During the 1990 inspection, inspectors observed a circular tank of approximately 300-400 gallon capacity, located next to the chrome plating area, filled approximately one-half full with an orange brown liquid. Mr. Van Hoose stated that the material was waste which had been pumped from the vault several years ago when snowmelt had seeped into the vault through the concrete walls and combined with plating wastes already in the vault. Mr. Kevin Wakefield, Eimco's chrome plating operator, stated that the previous chrome plating operator had "treated" the waste pumped from the vault and that an additional three barrels of treated waste was being stored outside. Mr. Wakefield stated that he had been Eimco's chrome plating operator for three years, as of the date of the 1990 inspection.
8. During the 1990 inspection, inspectors asked Mr. Wakefield how often the vault is pumped. Mr. Wakefield replied that he had never pumped it in his three years at Eimco as the chrome plating operator.
9. During the 1990 inspection, inspectors requested documentation of lab analysis for the chromium waste stored in the tank and drums. Eimco responded by forwarding a copy of a November 30, 1989 laboratory report, for samples marked "waste barrels", which showed that the chromium concentration in the liquid sample was 480 mg/l.
10. On August 11, 1989, inspectors from the Division conducted an inspection of Eimco to determine compliance with the Colorado Hazardous Waste Act.
11. During the 1989 inspection, inspectors observed two 55-gallon drums which Mr. Van Hoose stated were partially full of waste chromium sludge. According to Mr. Van Hoose, the sludge was generated from filtering liquid which was pooled in the vault below the plating tanks. Mr. Van Hoose stated that the vault had to be pumped because snowmelt had seeped through the vault the previous winter. The inspectors observed liquid in the vault during the 1989 inspection.
12. During the 1990 inspection, inspectors asked Mr. Van Hoose if any waste generated by Eimco had ever been sent off-site for disposal under a hazardous waste manifest. He replied that no waste had. During the 1990 inspection the inspectors asked Mr. Van Hoose if the chromium waste present during the 1989 inspection had been disposed. Mr. Van Hoose stated that he had been trying to arrange for disposal of the waste but the waste was still on site.
13. Eimco does not have a hazardous waste permit issued either by the Division or by the U.S. Environmental Protection Agency and has never been granted interim status for the treatment, storage or disposal of hazardous waste. Eimco has never notified the Division of hazardous waste activity pursuant to 6 CCR 1007-3, Part 99.
14. On or about November 10, 1986, Baker Mine Service notified the Division that it was a generator of ignitable waste and EP Toxic waste. Baker Mine Service ran a similar if not identical operation to Eimco's. Baker Mine Service operated out of the same building from which Eimco currently operates (2222 Devereux Road, Glenwood Springs, Colorado).

#### Conclusions of Law

15. A solid waste includes any material which is accumulated, stored, or treated before or in lieu of being abandoned by being disposed, burned or incinerated. 6 CCR 1007-3, Section 261.2(b)(3). Eimco's chromium waste is a solid waste because it is being stored prior to disposal.

16. A solid waste is a hazardous waste if it exhibits any of the characteristics of hazardous waste as defined in 6 CCR 1007-3, Part 261, Subpart C or if it is listed in 6 CCR 1007-3, Part 261, Subpart D. 6 CCR 1007-3, Section 261.3(a).
17. Wastewater treatment sludges from electroplating operations are listed as hazardous wastes with the hazardous waste number F006. 6 CCR 1007-3, Section 261.31. "Sludges" are defined as any solid, semi-solid or liquid waste generated from municipal, commercial or industrial wastewater treatment plant. 6 CCR 1007-3, Section 260.10. The wastes in the 300-400 gallon tank and the 55 gallon drums described in paragraph #7 of this Order were wastewaters, derived from Eimco's chrome plating operation, which had been treated. These wastes thus are listed wastewater treatment sludges with the hazardous waste number F006.
18. If a conditionally exempt small quantity generator of hazardous waste accumulates more than a total of 1000 kg of hazardous waste on site it becomes subject to the requirements applicable to generators of 100-1000 kg of hazardous waste per month. 6 CCR 1007-3, Section 261.5. Eimco's accumulation of one-half of a 300 gallon container plus three 55-gallon drums of EP toxic chromium waste exceeds this threshold, and makes it subject to the requirements for generators of 100-1000 kg of hazardous waste per month.
19. A generator of 100-1000 kg of hazardous waste per month may accumulate hazardous waste on site without a permit for a maximum of 180 days. 6 CCR 1007-3, Section 262.34(d). Eimco's storage of hazardous waste on site for over one year (from at least August 11, 1989 to at least September 7, 1990) without a hazardous waste permit or interim status is a violation of Section 25-15-308(1)(b), C.R.S., (1989).

#### ORDER

Based on the foregoing Findings of Fact and Conclusions of Law, and pursuant to Section 25-15-308, C.R.S. (1989), Eimco is hereby ordered to comply with the following:

20. Immediately begin managing all containers of hazardous waste as specified in 6 CCR 1007-3, Section 262.34(d) and 6 CCR 1007-3, Part 265, Subpart I (if the waste is placed in containers) or the applicable portions of 6 CCR 1007-3, Part 265, Subpart J (if the waste is placed in tanks). These requirements include, but are not limited to, labeling hazardous waste tanks and/or containers with the words "hazardous waste" and with an accumulation start date.
21. Within 30 days of the effective date of this Compliance Order, Eimco must submit a written plan detailing the designated disposal site, method of disposal, volume of waste disposed, projected date of waste shipment, waste analysis/profiles and any other pertinent information regarding the treatment and disposal of the chrome wastewater treatment sludge currently stored on-site. Plans for the management of future wastes generated shall be included.
22. Within 30 days of the effective date of this Compliance Order, submit an updated Notification of Hazardous Waste Activity (Form 8700-12).

**NOTICE OF LIABILITY FOR CIVIL  
PENALTIES AND INJUNCTIVE RELIEF**

Section 25-15-309, C.R.S. (1989), provides that any person who violates the Hazardous Waste Act, Sections 25-15-101 to 313, C.R.S. (1989), the regulations implementing the Act, 6 CCR 1007-3, or any compliance order of the Department of Health which is not subject to a stay pending judicial review, shall be subject to a civil penalty of not more than \$25,000 per violation for each day during which such violation occurs. The Colorado Department of Health may request that the Attorney General bring suit for injunctive relief or civil or criminal penalties or both for failure to comply with Section 25-15-308 and this Order. The Compliance Order deadlines will remain as stated herein unless modified subsequent to the informal conference.

**NOTICE OF EFFECTIVE DATE OF ORDER**

Unless you request an informal conference (pursuant to the following paragraph) within 10 days of receipt of this Order, this Order shall then become effective immediately. Should you request an informal conference, the above compliance deadlines, excepting the deadlines specified in paragraph 20 are suspended pending further notice to be issued after such conference.

**OPPORTUNITY TO REQUEST  
INFORMAL CONFERENCE**

If you wish to contest any findings made herein or explain any circumstances that tend to mitigate the violation(s), you may request an informal conference within 10 calendar days of the receipt of the Compliance Order. The Division will schedule a conference to be held within 20 days of your receipt of this Compliance Order. Although this conference is an informal proceeding, you may, if you so desire, have legal counsel attend with you. Should you wish to schedule an informal conference, or should you have any questions regarding this Compliance Order, contact:

**To:** Mahesh Albuquerque; Marilyn Hajicek; Tim Kelley; Bev Snodgrass

**Subject:** Suspected Release: 15558 - ROARING FORK TRANSIT AGENCY

During 11/1/06 inspection, 2" of diesel was found in sub-pump containment at diesel UST. Unable to determine source of release at time of inspection. O/O later indicated that there was a possible tank overfill that occurred last week, and possibly some of that product migrated from the tank fill to the STP containment. During the inspection, it was also found that the spill buckets for 3 tanks, including the diesel, are heavily cracked/torn and not liquid tight, so any spillage into the spill bucket as a result of an overfill would not have been contained. O/O was instructed to notify OPS of a suspected release w/in 24 hours, to remove product from containment by 11/2/06, to perform lake test/hydrotest of STP containment, and tightness testing of piping, and report results to OPS w/in 7 days. Other release detection records were requested to be submitted by with the routine inspection.

Re: Site Characterization Report for Roaring Fork Transportation Authority  
2307 Wulfsohn Rd Glenwood Springs, CO 81601 Facility ID# 15558

Dear Mr. Sonnier:

Waste Engineering, Inc. (WEI) is submitting the attached Site Characterization Report (SCR). During our conversations, we indicated the data obtained during our investigation was limited. At your request, we obtained grab samples at each of the 10,000-gallon underground storage tank (UST) fill dispensers. The samples were obtained at approximately 1½ feet below ground surface. The samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), diesel range organics (DRO), and gasoline range organics (GRO). Subsequently, the diesel tank sample was analyzed for polyaromatic hydrocarbons (PAHs).

WEI completed this SCR on behalf of Roaring Fork Transportation Authority (RFTA). As indicated during our conversation, due to the limited data collected at the Site, a majority of the information required in the SCR is not available.

Should you have any questions or require additional information, please do not hesitate to call.

Very truly yours,

WASTE ENGINEERING, INC.

# **SITE CHARACTERIZATION REPORT (SCR)**

Submit the completed SCR to:

Colorado Department of Labor and Employment  
Oil Inspection Section  
(Technical Reviewer's Name - if known)  
633 17<sup>th</sup> Street, Suite 500  
Denver, CO 80202-3660

This standardized format is required for all SCRs submitted to the Colorado Oil Inspection Section for releases occurring on or after February 1, 1999.

This SCR is intended to replace the Initial Site Characterization Report (ISCR). In addition to the information formerly included in the ISCR, it is required that the SCR define the extent of contamination. The SCR incorporates risk based corrective actions through Tier 1 or Tier 1A, as appropriate to the site. This report must be submitted in duplicate.

## **IMPORTANT**

**Refer to the OIS Owner/Operator Guidance Document for assistance in report preparation.**

**This report is required to be submitted within 90 days of the release.**

**If contamination has never been detected above Tier 1 and/or MCLs, a No Further Action Request (NFAR) Report may be submitted in place of this SCR.**

**Date Report was completed: April 24, 2007**

**INSTRUCTIONS FOR COMPLETING REPORT:** Complete all applicable sections and appendices of this report. If a question does not apply to the site, insert ANA=.

Limit your responses to the suggested space(s). If you are using the computer version of this form, the bracketed number after each question (e.g. [2]) is the number of suggested lines for each answer. Do not use bold type when answering, except as requested in the Tables of the Appendices. Insert rows in tables as needed, and delete any unused rows. Contact the Oil Inspection Section technical assistance line at (303) 318-8547 if you have any questions. The OIS Regulations, Guidance Document, Report Formats, and additional program related information can be found at the Oil Inspection Website at <http://oil.cdic.state.co.us>. Call (303) 321-4164 for a copy of the Regulations (commodity # 615-82-44-0899) or the Guidance Document (commodity # 615-82-44-0626).

## SITE CHARACTERIZATION REPORT SUMMARY

What type of product was released? (Check all that apply) Leaded Gasoline \_\_\_ Unleaded Gasoline X Diesel X Waste Oil \_\_\_ Other \_\_\_

Is there evidence of any released hazardous substance on the site? (If this is an AST release and it exceeds the RCRA level for TCLP benzene, it is a hazardous substance.) Yes \_\_\_ No X (check one). If yes, contact the Colorado Department of Public Health and Environment.

Does soil contamination exist? (check all that apply) Onsite X Offsite \_\_\_ If so, what is the vertical extent of soil contamination? From \_\_\_ ft to \_\_\_ ft (unknown). What is the soil type? Pea gravel bedding – Undisturbed soil consists of alluvial silts, clays, and gravels.

Does groundwater contamination exist? (check all that apply) Onsite \_\_\_ Offsite \_\_\_  
The need for a Ground water evaluation has not been determined.

Is free product present in the soil or groundwater? Yes \_\_\_ No \_\_\_ (check one)  
The need for a Ground water evaluation has not been determined.

What is the depth to groundwater (in feet)? Based on the difference in elevation between the Site and Colorado River – The depth to Groundwater is estimated at 300 feet.

**For each category, list the distance from the source to the nearest point of exposure (POE).  
Only list POEs within 1/4 mile of the site.**

|               | Property Boundary | Surficial Soils | Subsurface Utilities | Structures | Groundwater Wells | Surface Water | Sensitive Environment |
|---------------|-------------------|-----------------|----------------------|------------|-------------------|---------------|-----------------------|
| Distance (ft) | 100               | 0               | 50                   | 50         | Unknown           | 800           | 800 Colorado River    |

**List the highest concentration of the following constituents found**

|                            | Benzene | Toluene | Ethyl Benzene | Xylenes | TVPH | TEPH  | TPH | Oil & Grease | Other      |
|----------------------------|---------|---------|---------------|---------|------|-------|-----|--------------|------------|
| Soil (mg/Kg)               | >0.053  | 1.4     | 4.4           | 24      | 580  | 6,600 | N/A | N/A          | YES - PAHs |
| Water (µg/l)               | N/A     | N/A     | N/A           | N/A     | N/A  | N/A   | N/A | N/A          | NO         |
| Vapor (µg/m <sup>3</sup> ) | N/A     | N/A     | N/A           | N/A     | N/A  | N/A   | N/A | N/A          | NO         |

**List the highest concentration of the following constituents remaining on site**

|                            | Benzene | Toluene | Ethyl Benzene | Xylenes | TVPH | TEPH  | TPH | Oil & Grease | Other      |
|----------------------------|---------|---------|---------------|---------|------|-------|-----|--------------|------------|
| Soil (mg/Kg)               | >0.053  | 1.4     | 4.4           | 24      | 580  | 6,600 | N/A | N/A          | YES - PAHs |
| Water (µg/l)               | N/A     | N/A     | N/A           | N/A     | N/A  | N/A   | N/A | N/A          | NO         |
| Vapor (µg/m <sup>3</sup> ) | N/A     | N/A     | N/A           | N/A     | N/A  | N/A   | N/A | N/A          | NO         |

N/A = Not Analyzed

The need for a Groundwater evaluation has not been determined.

**A. RELEASE INFORMATION****1. History of this release.**

- a) **Date of release (If actual release date is unknown, input the date that the release was first suspected).** [1] February 6, 2007
- b) **Date that OIS was notified of the suspected release.** [1] February 6, 2007
- c) **Date that the suspected release was confirmed.** [1] February 27, 2007
- d) **Date that OIS was notified of the confirmed release.** [1] March 1, 2007
- e) **Include the location of the release on Figure 1, Appendix C.**

**2. How release was discovered.**

- a) **Discovered at tank removal or closure in place (yes/no)** No
- b) **Discovered during subsurface investigation (yes/no)** Yes
- c) **Discovered as a result of release detection or system failure (yes/no)** No
- d) **Impacts discovered at off-site property (yes/no)** No
- a) **Other (describe)** [1] The release was suspected by an OPS Inspector during his observation of replacement of overfill protection. Sampling and analysis of soil samples was requested.

**3. Release description.**

- b) **Product(s) released** [1] Diesel and Gasoline.
- c) **Quantity released** [1] The quantity release is not known but would be limited to quantity released from the original overfill assembly.

**B. SITE HISTORY****1. List known historical uses of the site on the table below.**

| Type of Use and/or Business Name | Begin Date | End Date |
|----------------------------------|------------|----------|
| Bus Maintenance                  | 2002       | current  |
| Previously Undeveloped           |            |          |
|                                  |            |          |

2. Describe any previous releases at the site on the table below. No previous releases are known or have been reported.

| Date of Prior Release | Product | Quantity (gallons) | Source/Cause of Release (Identify location on Fig. 1) | No Further Action Letter Issued? (y/n) (If yes enter date) |
|-----------------------|---------|--------------------|-------------------------------------------------------|------------------------------------------------------------|
| ANA≡                  | ANA≡    | ANA≡               | ANA≡                                                  | ANA≡                                                       |
|                       |         |                    |                                                       |                                                            |

3. If a no further action letter has not been issued for a previous release explain on-going activities [1]. No previous releases are known or have been reported.

### C. RELEASE CONFIRMATION

1. Storage tank removal/closure in place. (Complete Section F-1 to describe tank excavation dimensions, soil laboratory results, etc.).

a) How many tanks were removed or closed in place? [1] No tanks have been removed or closed in place.

b) How many tanks remain on site which are in operation? [1] Two 10,000-gallon tanks remain on site and in operation.

c) How many tanks remain on site which have not been properly closed in place? 0 - Two 10,000-gallon tanks remain on site and in operation.

d) List on the table below information concerning tank removal/closure in place. (Tank # as identified on Figure 1 and/or Figure 2, Appendix C).

| Tank # | Date Removed or Closed | Indicate closed in place(I), removed (R) | Tank Condition (corrosion, holes, etc.) | Contamination Suspected? (y/n) | Samples Analyzed? (y/n) |
|--------|------------------------|------------------------------------------|-----------------------------------------|--------------------------------|-------------------------|
| ANA≡   | ANA≡                   | ANA≡                                     | ANA≡                                    | ANA≡                           | ANA≡                    |
|        |                        |                                          |                                         |                                |                         |
|        |                        |                                          |                                         |                                |                         |

b) Were tank removal or closure in place activities performed in accordance with API recommended practice 1604, or equivalent? (yes/no) No If no, describe tank removal/closure in place activities? [1] No tanks have been removed or closed in place.

2. Subsurface investigation performed prior to a confirmed release, such as for a property transaction, or to confirm release detection or system failure. (Complete Section F-2 to describe soil boring installations, soil laboratory results, etc.). The release was suspected by an OPS Inspector during his observation of the replacement of overfill protection. Sampling and analysis of soil samples was requested.

**a) List on the table below information concerning site investigation.**

| Sample # | Date of Investigation | Contamination Suspected?<br>(y/n) | Samples Analyzed?<br>(y/n) |
|----------|-----------------------|-----------------------------------|----------------------------|
| Diesel   | 2/8/07                | N                                 | Y                          |
| Gasoline | 2/8/07                | N                                 | Y                          |
|          |                       |                                   |                            |

**b) If this investigation was performed as the result of release detection or system failure what part of the UST system failed? [1] No - The release was suspected by OPS Inspector during replacement of overfill protection. Sampling and analysis of soil samples was requested.**

- i. Was the system repaired? (yes/no)** The overfill protection assembly will be replaced.
- ii. Date of repair. [1]** On hold. Until OPS reviews this SCR.

**D. SITE CLASSIFICATION AND INITIAL RESPONSE/ABATEMENT**

**1. Site Classification Table.** A site characterization has not been completed. As a result the site classification tables can not be completed.

**a) Complete the Site Classification Table presented in Appendix G. See D.1**

**b) What is the current site classification? (1, 2, 2a, 3, 4)** Unknown.

**c) Has the site classification changed since the submittal of the Site Summary Form (SSF)? (As the extent of contamination is defined at the time of this report, the Site Classification Table will no longer contain unknown (U) threats). A site summary form was not requested by the OPS.**

**d) What classification was indicated for the site on the SSF? (1, 2, 2a, 3, 4)** See D.1

**2. Initial response and abatement. (Did the site classification ever indicate the need for an emergency response? (yes/no) No (If yes, answer the following questions and include all supporting documentation such as required permits in Appendix H, and waste manifests in Appendix F.)**

**a) Was the presence of explosive vapors ever detected at the site? (yes/no)** Explosive vapors were not noticeable during the sampling.

- i. If yes what actions were taken to mitigate explosion risks? [2]** See 2.a
- ii. Have these actions been completed?** ANA≡

**b) Was the presence of vapors or surficial particulates, in concentrations which may cause acute health effects, ever detected at the site?** ANA≡

- i. If yes, what actions were taken to mitigate the acute health risks?**
- ii. Have these actions been completed?** ANA≡

c) **Was the presence of free product on the ground surface, surface water, exposed soils, or in utilities ever detected at the site?** Regarding ground surface and exposed soil – No. No surface water was observed. The need for a utility investigation has not been determined.

i. **If yes, what actions were taken to mitigate these conditions?** [2] ANA≡

ii. **Have these actions been completed?** (yes/no) ANA≡

d) **Was any water supply well, supply line, storm water, or surface water body ever impacted by the release?** (yes/no) The site is connected to city water. Supply lines have not been evaluated. Stormwater was not observed during the site investigation. Given the estimated distance to the Colorado River (800'), it is unlikely that the Colorado River has been impacted.

i. **If yes what actions were taken to mitigate the risk of exposure to these Points of Exposure (POEs)?** [2] ANA≡

ii. **Have these actions been completed?** (yes/no) ANA≡

e) **Are there any other site classification sub-classifications, which relate to potential emergency situations, as listed above (e.g., Sub-classification 2.1 - Explosive vapors may accumulate in buildings within six months) currently applicable to this site?** (yes/no) A site characterization has not been completed. As a result the site classification or sub-classification tables can not be completed at this time.

i. **If yes, are activities underway or completed to mitigate these threats?** [2] ANA≡

ii. **Will mitigation activities be included in the corrective action plan (CAP)?** (yes/no) A CAP for this release has not been requested by the OPS.

## **E. FREE PRODUCT**

1. **Complete this section if free product has been discovered in wells, borings, or excavations.** A site characterization involving wells and borings has not been completed. A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

2. **Free Product in Wells or Borings** See E.1

a) **Provide information regarding free product located in wells or borings in Tables 4 and 5, Appendix B.**

b) **On what date was free product discovered?** [1] A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

c) **On what date was the OIS notified of the presence of free product?** [1] A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

d) **Has free product been recovered?** (yes/no) No

e) If so, what was the recovery method? [2] ANA≡

f) What was the quantity recovered? [1] ANA≡

g) How was recovered free product disposed? [1] ANA≡

### 3. Free Product in Excavations

a) Provide information regarding free product discovered in excavations.

| Date Discovered | Location | Product Thickness | Recovery Method | Date Recovery Completed | Quantity Recovered |
|-----------------|----------|-------------------|-----------------|-------------------------|--------------------|
| ANA≡            | ANA≡     | ANA≡              | ANA≡            | ANA≡                    | ANA≡               |
|                 |          |                   |                 |                         |                    |
|                 |          |                   |                 |                         |                    |

Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

b) On what date was the OIS notified of the presence of free product? [1] ANA≡

c) How was recovered free product disposed? [1] ANA≡

## F. SOIL INVESTIGATION

### 1. Excavations. (Includes excavations, trenches and construction excavations.)

a) Excavation dimensions.

i. Complete the following table for each excavation.

Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

| Excavation # | Length of Excavation | Width of Excavation | Depth of Excavation | Depth to Groundwater in Excavation (if present) |
|--------------|----------------------|---------------------|---------------------|-------------------------------------------------|
| Diesel       | 4 feet               | 5 feet              | 1.5 feet            | Not Present to 1.5                              |
| Gasoline     | 5 feet               | 9 feet              | 1.5 feet            | Not Present to 1.5                              |
|              |                      |                     |                     |                                                 |

ii. Plot the location of each excavation (include excavation #) on Figure 2, Appendix C.

b) Excavation Organic Vapor Meter (OVM) screening measurements.

i. List all OVM measurements on Table 1, Appendix B.

ii. Indicate the locations of OVM measurements (which did not have a laboratory analysis performed at the same location) on Figure 2a, Appendix C.

**c) Excavation Soil Sampling.**

- i. List all soil laboratory results on Table 2, Appendix B. Identify the locations where samples were obtained on Figure 2, Appendix C.
- ii. List the rationale for the sampling locations on Table 2, Appendix B.
- iii. Present geological observations including lithology in section J.
- iv. Were soils samples collected according to procedures filed with the OIS as part of the Listed Consultant program? Yes According to the OIS Owner/Operator Guidance Document? No If neither, describe soil sampling collection procedures. [3] Only one sample was requested by the OPS for each tank obtained near the original spill/overflow protection device.

**d) Soil Disposition**

- i. Complete the following table if any soils were excavated.

| Excavation Number | Cubic Yards of Contaminated* Soil Excavated | Disposition of Contaminated* Soil | Cubic Yards of Clean Soil Excavated | Disposition of Clean Soil |
|-------------------|---------------------------------------------|-----------------------------------|-------------------------------------|---------------------------|
| Diesel            | 0                                           | 0                                 | 0                                   | 0                         |
| Gasoline          | 0                                           | 0                                 | 0                                   | 0                         |
|                   |                                             |                                   |                                     |                           |

\* Soil concentrations above Tier 1 RBSLs and 500 mg/kg TPH.

- ii. Attach waste disposal manifests in Appendix F. No soil disposal has occurred.
- e) If groundwater was detected in the excavation complete Section H.
- f) Was extent defined to Tier 1 RBSLs and to the TPH threshold level of 500 mg/Kg? No If no, why not? [2] A Site characterization has not been requested by the OPS.
2. Soil Borings/Direct Push Points Soil sampling involving Borings/Direct Push Points has not been performed at the Site or Requested by the OPS.

**a) Borehole/direct push OVM screening.**

- i. Include the OVM screening measurements on the boring logs (Appendix E) for samples screened during the boring installations.
- ii. Indicate the locations of the borings (which did not have laboratory analyses of soil collected from the boring) on Figure 3a, Appendix C.

**b) Soil Sampling in the borehole/direct push points See 2.0**

- i. List all soil laboratory results on Table 2, Appendix B. Present boring locations on Figure 3, Appendix C.
- ii. List the rationale for the sampling locations on Table 2, Appendix B.
- iii. Present geological observations including lithology on the boring logs (Appendix E) and in section J.

- iv. Were soils samples collected according to procedures filed with the OIS as part of the Listed Consultant program? ANA≡ According to the OIS Owner/Operator Guidance Document? ANA≡ If neither, describe soil sampling collection procedures. [3]

**c) Soil Disposition**

- i. Were any contaminated soils generated during borehole installation activities? ANA≡ If yes, how were they disposed? [1] ANA≡
- ii. If any contaminated soils were disposed, attach waste disposal manifests in Appendix F.

- d) Was the extent of soil contamination defined to Tier 1 RBSLs and to the TPH threshold value of 500mg/Kg? No If no, why not? [2] A site characterization has not been performed or requested by the OPS.

**G. SOIL VAPOR INVESTIGATION**

1. Was the purpose of soil vapor sample collection to assist in defining the extent of petroleum hydrocarbon contamination in the subsurface? A soil vapor investigation has not been performed or requested by the OPS.
2. Was the purpose of soil vapor sample collection to identify threats to structures that may be impacted from soil vapors? ANA≡ If yes briefly describe rationale for selected locations and depths (e.g., proximity to source, soil types, utilities, etc.) [3]
3. How many samples were collected from each point? [1] ANA≡
4. Show the location of each sampling point on Figure 4, Appendix C. List sample results, sample location rationale, and depths on Table 3, Appendix B. ANA≡
5. What was the vapor point installation method? [2] ANA≡
6. What was the method of sample collection? [2] ANA≡
7. Were vapor samples collected according to procedures filed with the OIS as part of the Listed Consultant program? ANA≡ According to the OIS Owner/Operator Guidance Document? ANA≡ If neither, describe vapor sampling collection procedures. [3] ANA≡

**H. GROUNDWATER INVESTIGATION**

1. Were monitoring wells installed, and groundwater sampled? No – A groundwater investigation has not been performed or requested by the OPS.
  - a) What is the average depth to groundwater at the site? ANA≡
  - b) For each monitoring well completed at the site list information regarding surveyed elevation of the measuring point, depth to groundwater, depth to product and

**groundwater elevation on Table 5, Appendix B. Present the locations of the monitoring wells, including groundwater elevation values on Figure 6, Appendix C.**

- c) List all groundwater laboratory results on Table 4, Appendix B. Present monitoring well locations on Figure 5, Appendix C.**
- 2. Was groundwater discovered in locations other than wells (e.g., tank excavations)? A groundwater investigation has not been performed or requested by the OPS**
- a) At what locations (other than in wells) was groundwater discovered? [2] ANA≡**
- b) Identify the locations where groundwater was discovered (other than in wells) on Figure 5, Appendix C or on Figure 2, Appendix C, as appropriate. If groundwater at these locations was sampled, provide the sample results on Table 4, Appendix B. If groundwater was not sampled at these locations, explain why not [2] ANA≡**
- c) If excavation dewatering was necessary, provide volume data, manifests, discharge permits, and compliance sampling results in Appendix H.**
- 3. Were groundwater samples collected according to procedures filed with the OIS as part of the Listed Consultant program? (yes/no) ANA≡ According to the OIS Owner/Operator Guidance Document? (yes/no) ANA≡ If neither, describe groundwater sample collection procedures. [3] A groundwater investigation has not been performed or requested by the OPS.**
- 4. Has the extent of groundwater contamination been defined to concentrations below the MCLs? (yes/no) No If no, why not? [2] A groundwater investigation has not been performed or requested but the OPS.**

## **I. QUALITY ASSURANCE/QUALITY CONTROL**

### **1. Sampling Handling**

- a) Was all decontamination performed during this investigation in accordance with the QA/QC filed with the OIS as part of Listed Consultant program? Yes**
- b) Was all decontamination performed during this investigation in accordance with the QA/QC as described in Owner/Operator guidance document? Yes**

c) If the answer to both of the above is no, complete the following table.

| Equipment | Decontamination Method |
|-----------|------------------------|
| ANA≡      | ANA≡                   |
|           |                        |
|           |                        |

2. Provide all information regarding sample handling and shipping as instructed in Appendix D.

## J. GEOLOGY AND HYDROGEOLOGY

1. Regional Geology -within ½ mile (This information is required if minimal site specific data is available. If the site geology has been characterized, regional data should only be obtained, as necessary, to supplement site specific data).

a) What is the lithology and stratigraphy of the unsaturated and uppermost saturated intervals? [2] Surficial geology consists of unconsolidated alluvial materials. The alluvium includes sands, silts, and gravels.

b) Describe any features that may affect regional groundwater flow. [2] The Site is located approximately 800 feet south of the Colorado River.

c) What is the source of the information listed above? [1] Site observation and knowledge of area.

2. Site Geology (Using the data collected during excavation activities and the drilling logs located in Appendix E answer the following questions. If complex geology exists at the site, which a cross-section would help to illustrate, include it in Appendix E with the borings logs). ANA≡

a) What is the lithology and stratigraphy of the unsaturated and uppermost saturated intervals? [2] Unknown

b) Describe any features at the site which could affect groundwater flow such as the slope of the uppermost bedrock unit [2] Unknown

3. Regional Hydrogeology (within ½ mile) (This information is required if groundwater was not encountered during the site characterization. If groundwater was encountered, regional data should only be obtained, as necessary, to supplement site specific data).

Based on the difference in elevation between the Site and Colorado River – The depth to Groundwater is estimated at 300 feet.

a) What is the average depth to groundwater? [1] Unknown

b) What is the average thickness of the uppermost saturated interval? [1] Unknown

c) What is the regional groundwater flow direction? [1] Unknown

- d) **Is there evidence that the flow direction may vary?** [1] Unknown
- e) **What is the source of the information?** [1] ANA≡
4. **Site Hydrogeology** A groundwater investigation has not been performed or requested by the OPS.
- a) **What is the average depth to groundwater?** [1] Unknown
- b) **What is the average thickness of the uppermost saturated interval?** [1] Unknown
- c) **What is the groundwater flow direction?** [1] Based on topography Groundwater Flow Direction is expected to be to the North.
- i. **If there is evidence that flow direction varies, include groundwater elevation maps indicating the varying flow directions (Figure 6, Appendix C).** Unknown
- ii. **What is the suspected or known reason for this variation?** [2] ANA≡
- iii. **What is the most prevalent flow direction?** [1] Based on topography the most prevalent flow direction is to the North.
- d) **Complete the following table of aquifer parameters.**

| Parameter                 | Value   | How Was This Value Estimated? (Include Identification Numbers of Wells Tested) |
|---------------------------|---------|--------------------------------------------------------------------------------|
| Hydraulic Gradient        | Unknown | Unknown                                                                        |
| Effective Porosity*       | Unknown | Unknown                                                                        |
| Hydraulic Conductivity*   | Unknown | Unknown                                                                        |
| Groundwater Flow Velocity | Unknown | Unknown                                                                        |

\*May be estimated based on soil types during Tier 1 only

## K. POINTS OF EXPOSURE

1. **Property Boundary** A Site Investigation involving the evaluation of the extent and degree of contamination has not been performed or requested by the OPS.
- a) **What is the distance from the source of contamination to the nearest downgradient property boundary?** [1] It is estimated at 200 feet.
- b) **Provide the location of all site property boundaries on Figure 7, Appendix C.**
2. **Surficial Soils**
- a) **Is there reason to suspect that persons will come into contact with surficial soils containing contaminant concentrations not protective of exposure through dermal contact, inhalation, or ingestion?** No
- b) **If yes, what is the distance from the source to the nearest surficial soils that persons may come into contact with?** ANA≡

- c) Indicate the location of all impacted surficial soils that persons may come into contact with on Figure 7, Appendix C.

### 3. Utilities

- a) Are there utilities that could potentially be impacted by the release? (yes/no) Yes

- b) Complete the information concerning all utilities both on-site and off-site on the table below and provide utility locations on Figure 7, Appendix C.

| Utility               | Depth to Water | Depth to Utility | Impacted (y/n) | Potential to be Impacted (y/n) |
|-----------------------|----------------|------------------|----------------|--------------------------------|
| Natural Gas Line      | Unknown        | 4'               | Unknown        | y                              |
| Water Line            | Unknown        | 8'               | Unknown        | y                              |
| Sanitary Sewer Line   | Unknown        | 8'               | Unknown        | y                              |
| Storm Sewer Line      | Unknown        | 8'               | Unknown        | y                              |
| Subsurface Power Line | Unknown        | 4'               | Unknown        | y                              |
| Communication Conduit | Unknown        | 4'               | Unknown        | y                              |
| Other (None)          | -              | -                | Unknown        | y                              |

- c) What is the distance from the source to the nearest impacted or potentially impacted utility? Approximately 30' to the North.

### 4. Structures (excludes structures that house a business which dispenses petroleum products as part of normal operations). A Site Investigation involving the evaluation of the extent and degree of contamination has not been performed or requested by the OPS.

- a) Are there structures that have been impacted by vapor migration from contaminated groundwater or soils? The occurrence of vapor migration was not noticed during or Site investigation or reported by onsite personnel.

- b) Are there structures that have the potential to be impacted by vapor migration from contaminated groundwater or soils? (yes/no) The occurrence of vapor migration was not noticed during or Site investigation or reported by onsite personnel.

- c) Present all structures, including those that have been impacted or have the potential to be impacted by vapor migration from either contaminated groundwater or soil on Figure 7, Appendix C.

- d) What is the distance from the source to the nearest structure that has been impacted or has the potential to be impacted by vapor migration from contaminated groundwater or soils [1]. 50 feet.

**5. Groundwater Wells (excluding monitoring wells)** A groundwater well search has not been performed or requested by the OPS.

a) List the location and uses of all groundwater wells located within ½ mile of the site. Include this information on Table 6, Appendix B. Present the location of the wells on a U.S.G.S. 7.5' Quadrangle Topographic map (Figure 8, Appendix C).

b) How many groundwater wells are located downgradient and within ½ mile of the site? [1] Unknown

c) Is there a producing groundwater well whose radius of influence could affect groundwater flow at the site? (yes/no) Unknown

d) What is the distance from the source to the nearest downgradient groundwater well? [1] Unknown

**6. Surface Water/Sensitive Environments**

a) Identify the location of all surface water features (lakes, streams, wetlands, etc.) located within ½ mile of the site on Figure 8, Appendix C.

b) What is the distance from the source to the nearest downgradient surface water feature? [1] The Colorado River is located approximately 800 feet North of the Site.

**L. EXPOSURE PATHWAYS**

An evaluation of the extent and degree Characterization has not been performed or requested by the OPS. As a result, The Exposure Pathway Screening Criteria Table cannot be completed.

**a) Complete the Exposure Pathway Screening Criteria Table**

| <b>Exposure Pathway Screening Criteria - Bases for Eliminating Pathways</b>                                                                                                                                                                                                                                                                                                                                           | <b>Y</b> | <b>N</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|
| <b>Groundwater (Ingestion):</b>                                                                                                                                                                                                                                                                                                                                                                                       |          |          |
| --Impacted groundwater concentrations are below MCLs, or                                                                                                                                                                                                                                                                                                                                                              |          |          |
| --Impacted water-bearing unit is designated as "non-usable" by the CWQCC, or                                                                                                                                                                                                                                                                                                                                          |          |          |
| --Groundwater plume is stable or diminishing within the property boundary (as demonstrated by four quarters of monitoring), and<br>--There is no impact to a water supply well, (active or inactive), and<br>--Dissolved oxygen concentrations are higher outside of the defined plume, and<br>--Groundwater flow velocity is <50 ft/year, and<br>--Transport modeling results are consistent with site observations. |          |          |
| <b>Groundwater (Enclosed Space Vapors):</b>                                                                                                                                                                                                                                                                                                                                                                           |          |          |
| --Impacted groundwater concentrations are below MCLs, or                                                                                                                                                                                                                                                                                                                                                              |          |          |

- b) Do the responses to the Exposure Pathway Screening Criteria Table indicate that any pathways may be eliminated from further consideration? (yes/no) Unknown**
- c) Are there any conditions not included in the table that may result in the elimination of any additional pathways? (yes/no) Unknown**
- d) If so, identify the pathway and conditions here. Any pathway elimination not specified in the table is subject to OIS approval. [4] ANA≡**
- e) For all pathways that may be eliminated, attach any supporting documentation (e.g., documentation of a "non-useable" designation by the CWQCC) in Appendix H.**

**f) What are the completed exposure pathways? See L.**

- i. Groundwater (Ingestion) (yes/no)**
- ii. Groundwater (Enclosed Space Vapors) (yes/no)**
- iii. Surficial Soils (Ingestion, Ambient Vapors, Particulates, Dermal Contact) (yes/no)**
- iv. Subsurface Soils (Enclosed Space Vapors) (yes/no)**
- v. Subsurface Soils (Leaching to Groundwater) (yes/no)**

**M. LAND USE**

- 1. All sites are considered under the residential land use classification unless the industrial classification is requested and approved by the OIS. Is an industrial classification being requested for this site? (yes/no) An Industrial land use may be appropriate.**
  - a) If yes, is the property and any currently or potentially impacted property currently zoned Industrial? (yes/no) The Site and surrounding property is zoned light industrial.**
  - b) If yes, has the OIS been added to the list of parties to be notified of any application for rezoning? (yes/no) No**
  - c) If yes, include official documentation of the addition of the OIS to this list (this documentation must indicate that the OIS will remain on the list until the OIS requests to be removed from the list). Include this documentation in Appendix H.**

**N. RISK BASED SCREENING LEVEL (RBSL) SELECTION**

A Site Characterization involving the evaluation of the extent and degree of soil contamination has not been performed or requested by the OPS.

1. Complete the following table to determine the appropriate RBSL(s) for the site. Refer to the OIS Storage Tank Regulations (7 C.C.R. 1101-14, Table 5-1) for the Tier 1 RBSL look-up table. If a "y" has been indicated in the Pathway Completed column, the RBSL and Source Concentration columns should be completed for every COC that exceeds the Tier 1 RBSL in Table 5-1. Consider the Land Use designation for the site to determine the correct RBSL for each completed pathway.

| Exposure Pathway                              | Pathway Completed (y/n) | Chemical of Concern (COC) | RBSL | Source Concentration |
|-----------------------------------------------|-------------------------|---------------------------|------|----------------------|
| Surficial Soil (mg/Kg)                        |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |

|                                               |                         | Xylene                    |      |                      |
| Groundwater to Indoor air inhalation (mg/l)   |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |
| Groundwater Ingestion (mg/l)                  |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |

2. RBSLs per media

- a) Were both the Surficial Soil and Soil Leaching to Groundwater exposure pathways complete? (yes/no) If yes, the RBSLs for soil will be those for the Soil Leaching to Groundwater exposure pathway. Unknown
- b) Were both the Groundwater to Indoor Air Inhalation and Groundwater Ingestion pathways complete? (yes/no) If yes, the RBSLs for groundwater will be those for the Groundwater Ingestion exposure pathway. Unknown

**O. TOTAL PETROLEUM HYDROCARBONS (TPH)/POLYNUCLEAR AROMATIC HYDROCARBONS (PAH)**

A Site investigation involving the evaluation of the extent and degree of soil contamination has not been performed or requested by the OPS.

**1. Source concentrations**

- a) Are all of the concentrations of the chemicals of concern (benzene, toluene, ethylbenzene, xylenes) associated with this release below the RBSLs or SS-RBSLs? (yes/no) Based upon the two soil samples collected at the Site, RBSLs for BTEX have not been exceeded.
- b) Does the TPH concentration exceed the threshold value of 500 mg/Kg? Yes, both samples had reported DRO and GRO concentrations above 500 mg/Kg.

**2. PAH Evaluation - If both answers to question #1 above are yes, then a soil sample collected from the area believed to be the most contaminated must be analyzed for the 16 priority PAHs. For the following questions refer to the Tier 1 RBSL table for PAHs in the Owner/Operator Guidance Document.**

**a) If the surficial soil pathway is complete at this site answer the following questions:**

- i. Do site PAH concentrations exceed the Tier 1 RBSLs for any compounds for the surficial soil pathway? PAH concentrations for the Diesel do not exceed Tier I RBSL's. PAH analysis for Gasoline was not requested by the OPS.
- ii. If yes, list the compounds that exceed the RBSLs and the concentrations at which they remain on the site. ANA=

**b) If the subsurface soil leaching to groundwater pathway is complete at this site answer the following questions:**

- i. Do site PAH concentrations exceed the Tier 1 RBSLs for benz(a)-anthracene, dibenz(a,H)-anthracene or naphthalene compounds for the subsurface soil leaching to groundwater pathway? PAH concentrations for Diesel do not exceed the Tier 1 RBSLs. PAH analysis for Gasoline was not requested by the OPS.
- ii. If yes, list the compounds at the site that exceed the RBSLs for the above compounds and the concentrations at which they remain on the site.
- iii. Do PAH levels exceed the Tier 1 RBSLs for the 13 chemicals not specified in "i" above for the surficial soil pathway? (yes/no) PAH concentrations for Diesel do not exceed the Tier 1 PAH RBSLs. PAH analysis for Gasoline was not requested by the OPS.
- iv. If yes, list the compounds at the site that exceed the RBSLs for the above compounds and the concentrations at which they remain on the site. See O.2.b.iii.

**c) If the groundwater volatilizing to indoor air pathway is complete at this site answer the following questions: A Groundwater investigation has not been performed or requested by the OPS.**

- i. Do site naphthalene concentrations exceed the Tier 1 RBSL for the groundwater volatilizing to indoor air pathway? (yes/no) Unknown
- ii. If yes, what is the concentration of naphthalene in groundwater remaining on the site? ANA≡

d) If the groundwater ingestion pathway is complete at this site answer the following questions: See O.2.c

- i. Do site benzo(a)-pyrene concentrations exceed the Tier 1 RBSL for the groundwater ingestion pathway? (yes/no) Unknown
- ii. If yes, what is the concentration of benzo(a)-pyrene in groundwater remaining on the site? Unknown

**P. TIER 1A**

- 1. Has a Tier 1A evaluation been performed for this site? (yes/no) No
- 2. Was there reason to believe, based on site conditions, that the collection of site-specific information would lead to a significantly different cleanup goal? (yes/no) Unknown
- 3. Were site-specific data collected to be used as input parameters into the Tier 1A Model? (For a Tier 1A evaluation, site-specific data must be collected from the site, or calculated from data collected from the site, as outlined in the Owner/Operator Guidance Document.) (yes/no) No

4. If site-specific input parameters were used to create Tier 1A SS-RBSLs, list those parameters on the following table and indicate the source of the data. Include locations where data are collected on the appropriate figure. A site characterization has not been performed or requested by the OPS.

| Parameter                         | Value | How Was This Value Determined? (Include Identification Numbers of Wells Tested, Location of Borings, etc.) |
|-----------------------------------|-------|------------------------------------------------------------------------------------------------------------|
| Depth to subsurface soil source   |       | Unknown                                                                                                    |
| Depth to groundwater              |       | Unknown                                                                                                    |
| Thickness of the capillary fringe |       | Unknown                                                                                                    |
| Thickness of the unsaturated zone |       | Unknown                                                                                                    |
| Length of source                  |       | Unknown                                                                                                    |
| Width of source                   |       | Unknown                                                                                                    |
| Hydraulic conductivity            |       | Unknown                                                                                                    |
| Gradient                          |       | Unknown                                                                                                    |
| Fraction of organic carbon        |       | Unknown                                                                                                    |
| Total porosity                    |       | Unknown                                                                                                    |
| Unsaturated zone water content    |       | Unknown                                                                                                    |
| Unsaturated zone air content      |       | Unknown                                                                                                    |
| Infiltration rate                 |       | Unknown                                                                                                    |
| Soil bulk density                 |       | Unknown                                                                                                    |
| Distance to point of exposure     |       | Unknown                                                                                                    |
| Effective porosity                |       | Unknown                                                                                                    |

5. Attach the Tier 1A SS-RBSL table generated by inputting site specific data collected above into the Tier 1A Model (located on the OIS webpage)

#### Q. RECOMMENDATIONS

- Are all source concentrations remaining at the site below RBSLs in soil and MCLs in groundwater? (yes/no) Unknown If yes, you may request no further action. A groundwater investigation has not been performed or requested by the OPS.
- Are source concentrations remaining at the site above RBSLs in soil and/or MCLs in groundwater? (yes/no) An investigation involving evaluation of the extent a degree of soil contamination or groundwater evaluation has not been performed or requested by the OPS. If yes, do you recommend remediation to Tier 1 levels? (yes/no) Unknown What method(s) of remediation will you be evaluating in your corrective action plan (CAP)? [2] Unknown
- Have you performed a Tier 1A evaluation? (yes/no) No Are all source concentrations remaining at the site below the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown  
If yes, you may request a no further action.

4. **Have you performed a Tier 1A evaluation? (yes/no) No Are source concentrations remaining at the site above the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown If yes, do you recommend remediation to Tier 1A levels, or Tier 1 levels? (yes/no) Unknown What method(s) of remediation will you be evaluating in your CAP?[2] Unknown**
5. **Have you performed a Tier 1A evaluation? (yes/no) No Are source concentrations remaining at the site above the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown If yes, do you recommend proceeding to a Tier 2 evaluation? (yes/no) Unknown What method(s) of remediation will you be evaluating in your CAP to cleanup to Tier 2 should site specific target levels be exceeded? [2] Unknown**

## APPENDIX A - INSTRUCTIONS

### 1. TABLES (Appendix B)

#### Table 1 - Summary of Organic Vapor Meter Readings

This table lists the results of field screening of soil samples with an Organic Vapor Meter (OVM). Information presented shall include sample location, OVM reading, sample depth (ft bgs), and an indication of whether the sample was analyzed at a laboratory.

#### Table 2 - Summary of Soil Laboratory Results

This table lists the results obtained from laboratory testing of soil samples. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations. If any analyte was detected which is not listed on this table, answer Ayes in the AOther column and attach the laboratory analytical reports for those analytes. Concentrations that exceed the Tier 1 RBSL for the soil leaching to groundwater pathway must be entered in bold type face. Also include on Table 2 the rationale for sample collection, using the codes listed in the footnote.

TVPH = Total Volatile Petroleum Hydrocarbons

TEPH = Total Extractable Petroleum Hydrocarbons

TPH = Total Petroleum Hydrocarbons

#### Table 2a - Summary of PAH Soil Laboratory Results

If a sample was analyzed for the priority PAHs the results obtained from the laboratory testing should be listed on this table. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations in mg/Kg. This analysis will only be required when the BTEX constituents are below site cleanup goals and TPH concentrations exceed 500mg/Kg.

**Table 3 - Summary of Vapor Laboratory Results**

This table lists the results obtained from laboratory testing of vapor samples. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations. If any analyte was detected which is not listed on this table, answer Ayes in the AOther column and attach the laboratory analytical reports for those analytes. Also included on this table is the rationale for sample collection.

**Table 4 - Summary of Groundwater Laboratory Results**

This table must be included when water samples are collected and shall present the results obtained from laboratory testing of water samples. Information presented shall include sample designation, sample collection date, sample depth (depth below grade level when collected from an excavation), analyte concentrations, and analytical methods. If any analyte was detected which is not listed on this table, answer Ayes in the AOther column and attach the laboratory analytical reports for those analytes. Concentrations that exceed Colorado groundwater standards (MCLs) shall be presented in boldface type. Sample locations must be illustrated on Figure 5.

**Table 5 - Groundwater Elevation Table**

This table shall include the surveyed elevation of each well measured during this investigation, the date of the measurement, depth to water, depth to product, product thickness, product elevation, and the corrected elevation of the groundwater.

**Table 6 - Summary of Water Well Information**

This table shall include the results of a water well survey for wells located within 2 mile of the site. Information presented shall include the well number, geographic location (cadastral coordinates), approximate distance from site (if known), approximate compass direction from site (if known), use of each well, well depth, water level, and pumping rate. Wells down gradient of the site shall be presented in boldface type.

**2. FIGURES (Appendix C)**

Requirements common to all maps include the following: title block with figure number, site name, site address, date, scale, north arrow, and a legend. Distinct symbols should be used to differentiate varying sampling and analytical techniques (e.g.  $\odot$  = Monitoring Well,  $\bullet$  = Borehole,  $\circ$  = Geoprobe Point,  $\square$  = OVM locations,  $\Phi$  = laboratory data). All maps must be created to scale.

**Figure 1 - Site Map**

This map shall illustrate the important features at the site and the area immediately adjacent to the site. Include locations of property boundaries, fences, streets (with names), site buildings and adjacent structures, USTs/ASTs, piping runs and dispensers, and type of ground cover.

**Figure 2 - Excavation Sample Location Map**

This map shall illustrate the former locations of the tanks, and the sampling locations from within each tank excavation. For each of these sampling locations include a text box with sample depth and laboratory analytical results. Also include on the map the location of soils stockpiled. Clearly identify the dimensions of the excavation areas. Include features from Figure 1 as necessary for reference (e.g., major structures).

Diesel ex 4x5

Gas ex 5x9

**Figure 2a – OVM Screening Locations**

The two soil samples obtained at the Site were not screened using an OVM.

This map shall illustrate locations of samples collected for soil screening (as indicated in Table 2), which were not submitted to the laboratory for analysis. Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.). If the screened soils were submitted for analysis the location of the sample should not be identified on this figure, but should be placed on either Figure 2 or 3.

**Figure 3 - Soil Sample Location Map**

This map shall illustrate the sampling locations at the site (outside of the tank excavation(s)). Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.) For each of these sampling locations include a text box with sample depth and laboratory analytical results.

**Figure 4 - Vapor Sample Location Map**

A site investigation involving vapor sampling has not been performed or requested by the OPS.

This map shall illustrate the sampling locations at the site. Include features from Figure 1 as necessary for reference (e.g. major structures, excavations, etc.). For each of these sampling locations include a text box with sample depth and laboratory analytical results.

**Figure 5 - Groundwater Sample Location Map**

A site investigation involving a groundwater evaluation has not been performed or requested by the OPS.

This map shall illustrate the groundwater sampling locations at the site. Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.). For each of these sampling locations include a text box with laboratory analytical results.

**Figure 6 - Groundwater Elevation Map**

A site investigation involving a groundwater evaluation has not been performed or requested by the OPS.

This map shall illustrate the locations at which groundwater levels have been measured. Figure 1 may be used as a base map. Include the date of the measurement (separate maps must be created for individual measuring events) and the relative groundwater elevation.

**Provide groundwater elevation contours and an indication of the groundwater flow direction.**

**Figure 7 – POE Location Map**

A site investigation involving an evaluation of potential receptors has not been performed or requested by the OPS.

This figure will identify each property in the vicinity of the site which could potentially be affected by the release. The properties will be illustrated by land use (e.g., single family residential, vacant land, retail, dry cleaning, gas station, etc.). This figure will also identify all potential POEs (property boundaries, surficial soils, subsurface utilities, groundwater wells and surface water features/sensitive environments).

**Figure 8 – Area Surface Water, Groundwater, Topographical Map**

This map is used to provide regional topographic and POE information. Include a portion of a U.S.G.S. 7 2' Quadrangle Topographic Map or equivalent, measuring a minimum of six inches by six inches with the site located in the middle of the six inch by six inch section. The map shall include a scale (approximately 1" = 2,000'), distinct site location marker, and geographic contour intervals. Clearly identify surface water features and water wells (excluding monitoring wells) within ½-mile radius of the site. Provide a text box with the associated permit number (as indicated in Table 6) of each water well location.

Note: A groundwater well inventory has no been performed or requested by the OPS.

**3. LABORATORY DOCUMENTATION (Appendix D)**

Chain of Custody forms which accompany samples for laboratory analyses are required to contain the following information: site name and address, sample number, date and time sampled, matrix description (e.g. soil, water), container size, type and decontamination status (e.g. 40 ml laboratory decontaminated amber glass VOA vial), preservation method (e.g. HCl 5%, 4E C), date and method of transport to laboratory (e.g. hand delivered, Fed Ex etc.), analyte and methodology of analyses requested (e.g. Total Extractable Petroleum Hydrocarbons (TEPH) by EPA Method 8015 Modified), and the name and signature of the person collecting the samples. Also attach all laboratory reports, and laboratory quality assurance/quality control reports.

**4. BOREHOLE LITHOLOGIC LOGS AND WELL COMPLETION (Appendix E)**

A site investigation involving borehole has not been performed or requested by the OPS.

Boring logs must include the site name and address, boring number, date completed, surface elevation, depth, borehole diameter, initial and static water levels (if available), drilling method, sampling method, lithologic graphic to scale, an indication of the intervals from which samples were obtained, results of VOC screening, and a geologic description and/or Unified Soil Classification System (USCS) class of each rock or soil type encountered including any staining or petroleum odors.

The following additional information should be included with the lithologic logs if a well has been completed. Include the total depth of the well, the casing elevation, the diameter of the well casing, the well casing material (e.g. PVC, stainless steel), the length and depth

of the screened interval, the size and type of perforations of the screen (e.g. 0.010" milled slots), the type of filter pack material placed in the well (e.g. 10-20 mesh washed silica sand), the type of annular seal (e.g. 1/2" bentonite pellets), the type of grout used to fill the remaining annular space (e.g. Portland cement 5% bentonite), the type of well casing cap, the method of securing the well casing cap, and the type of protective surface casing. Also included should be a well completion graphic to scale which indicates the depth to the top of the filter pack, the depth to the top of the annular seal, and the location of the screened interval.

Also included in Appendix E should be any cross-sections completed to illustrate site conditions.

#### **5. WASTE DISPOSAL MANIFESTS (Appendix F)**

Contaminated soil removal has not been performed or requested by the OPS.

Attach copies of all manifests provided by transporters, landfills, treatment facilities, etc.

#### **6. SITE CLASSIFICATION CHECKLIST (Appendix G)**

To complete the Site Classification Checklist, place a check in the Threat (T) box if the situation, designated by sub-class (SUB), exists at the site. If the threat does not exist, check the N box. The U box should only have been checked when the Site Classification Checklist was submitted with the Site Summary Form. Upon completion of this report all conditions which exist at the site should be known. Check the Response (R) box if an appropriate response action has been completed for the existing condition at the site. If the response action has been completed and the threat no longer exists, the site classification will be the classification of the next most highly listed threat. The site will be classified by the first table where a threat box has been checked and an appropriate response has not been completed. However, complete the entire form and perform appropriate response actions for each condition which exists at the site. Complete response actions in order of highest priority (1 being the highest).

#### **7. SUPPORTING DOCUMENTATION (Appendix H)**

Attach all supporting documentation as required(e.g., permits for initial response and abatement activities, industrial zoning designation, water quality designation, etc.).

**APPENDIX B - TABLES**

**TABLE 1- SUMMARY OF ORGANIC VAPOR METER READINGS**

OVM measurements were not taken during our site investigation, as an OVM meter was not readily available.

| Sample Location I.D. | Date | Sample Depth (ft) | OVM Reading (ppm) | Laboratory Analyzed (y/n) |
|----------------------|------|-------------------|-------------------|---------------------------|
| N/A                  | N/A  | N/A               | N/A               | N/A                       |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |

N/D = Not Detected

N/A = Not Analyzed

## TABLE 2 - SUMMARY OF SOIL LABORATORY RESULTS

[illegible]

Identify any sample results which exceed Tier 1 RBSLs for soil leaching to groundwater pathway or 500mg/Kg TPH by presenting those results in bold typeface.

**N/D = Less than the stated laboratory detection limit**

**N/A = Not Analyzed**

characterization (WC)

**TABLE 2a - SUMMARY OF SOIL PAH LABORATORY RESULTS**

| Sample Collection Date | Compound                | Concentration mg/Kg | Depth sample collected (ft) | Sample # of TPH Sample | TPH Concentration in Original Sample mg/Kg |
|------------------------|-------------------------|---------------------|-----------------------------|------------------------|--------------------------------------------|
| 2/8/2007               | Acenaphthene            | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Acenaphthylene          | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Anthracene              | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Benzo(a)-anthracene     | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Benzo(a)-pyrene         | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Benzo(b)-fluoranthene   | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Benzo(g,h,i)-perylene   | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Benzo(k)-fluoranthene   | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Chrysene                | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Dibenzo(a,h)-anthracene | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Fluoranthene            | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Fluorene                | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Indeno(1,2,3-CD)-pyrene | < .180              | 1½                          | Diesel                 | 6,600                                      |
|                        | Naphthalene             | 1.90                | 1½                          | Diesel                 | 6,600                                      |
|                        | Phenanthrene            | 0.07                | 1½                          | Diesel                 | 6,600                                      |
|                        | Pyrene                  | < .180              | 1½                          | Diesel                 | 6,600                                      |

Identify any sample results which exceed Tier 1 RBSLs for the surficial soil pathway by presenting those results in bold typeface.

Responses which are common to all compounds (e.g., Sample collection date) only need to be completed for the first compound.

Repeat table if more than one sample is analyzed for PAHs

N/D = Less than the stated laboratory detection limit

N/A = Not Analyze

A site characterization involving an evaluation of vapors has not been performed or requested by the OPS.

[illegible]

N/D = Less than the stated laboratory detection limit

N/A = Not Analyzed

\* If ☐ yes ☐ no, list other analytes detected in a separate table

**\*\*\*Rationale – Assist in defining extent (DE). Identify threats to points of exposure (POE)**

a maximum

[illegible]

Identify any sample results which exceed Colorado Groundwater Standards (MCLs) by presenting those results in bold typeface.

N/D = Less than the stated laboratory detection limit

N/A = Not Analyzed

\* If ☐ yes ☐ no, list other analytes detected in a separate table

\*\*\*Rationale – Release confirmation (RC), In plume (IP), Upgradient (UG), Downgradient (DG), Point of Compliance (POC), Define extent (DE), Waste characterization (WC)

A site characterization involving wells and borings has not been completed or requested by the OPS. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS

[illegible]

## TABLE 6 - SUMMARY OF WATER WELL INFORMATION

A site characterization involving wells and borings has not been completed or requested by the OPS. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

[illegible]

**\*Information from the Colorado Division of Water Resources**

Indicate any wells which appear to be downgradient of the site in bold typeface.

Uses: 0 = Other Use, OM = Other Use (Monitoring Well), 1 = Agricultural, 3 = Commercial Use, 8 = Domestic Use, 9 = Livestock Use

| B0702099-01       | Diesel Tank        | B0702099-02       | Gasoline Tank      |

Enclosed are the analytical results for the submitted sample(s). Please review the CASE NARRATIVE for a discussion of any data and/or quality control issues. Listings of data qualifiers, analytical codes, key dates, and QC relationships are provided at the end of the report.

Sincerely,

Joseph Egry  
Project Manager

*"The Science of Analysis, The Art of Service"*

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0702099

Samples were prepared and analyzed according to EPA or equivalent methods outlined in the following references:

Test Methods for Evaluating Solid Waste, USEPA SW-846, Third Edition, Revision 4, December 1996.

Standard Method for Laboratory Determination of Water (Moisture) Content of Soil, Rock, and Soil-Aggregate Mixtures, ASTM D 2216-80, July 1980.

### REVIEW FOR COMPLIANCE WITH ANALYTICA QA PLAN

A summary of our review is shown below, organized by test:

#### SAMPLE RECEIPT:

Two (2) samples were received at a temperature of 4.6 deg C at Analytica-Thornton on 2/10/2007 12:00:00 PM. The samples were received in good condition and in order per chain of custody.

Test Method: Aromatic VOCs by GC/PID via method 8021B - BTEX - Solid

#### HOLDING TIMES:

Holding times were met for this Test

#### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

#### INSTRUMENT PERFORMANCE CHECKS:

Instrument checks were within method criteria.

#### INITIAL CALIBRATIONS:

Initial calibrations were within method criteria.

#### OPENING CONTINUING CALIBRATIONS:

Opening continuing calibrations were within method criteria.

#### CLOSING CONTINUING CALIBRATIONS:

Closing continuing calibrations were within method criteria or not applicable.

#### INTERNAL STANDARD AREAS:

There were no Internal Standard outliers.

#### SURROGATE RECOVERIES:

The samples shown below have the surrogate outside of control windows. This result was confirmed by reanalysis. The LCS, and method blank do not show this effect and this is considered likely to be due to sample matrix.

| Sample        | LabID        | Surrogate            | Recovery | LCL | UCL          |
|---------------|--------------|----------------------|----------|-----|--------------|
| Diesel Tank   | B0702099-01B | p-Bromofluorobenzene | 46.      | 77  | 120 Complete |
| Gasoline Tank | B0702099-02A | p-Bromofluorobenzene | 49.      | 77  | 120 Complete |
| Diesel Tank   | B0702099-01B | p-Bromofluorobenzene | 47.      | 77  | 120 Rrun     |
| Gasoline Tank | B0702099-02A | p-Bromofluorobenzene | 44.      | 77  | 120 Rrun     |

#### METHOD BLANK OUTLIERS:

There are no method blank outliers.

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0702099

(continued)

### LCS OUTLIERS:

There are no LCS outliers.

### MS/MSD and DUP OUTLIERS:

There are no MS/MSD or DUP outliers.

Test Method: ASTM D2216 - Pmoist - Solid

All method criteria was met for this test.

Test Method: SVOC by GC/FID via method 8015B - DRO - Solid

### HOLDING TIMES:

Holding times were met for this Test

### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

### INSTRUMENT PERFORMANCE CHECKS:

Instrument checks were within method criteria.

### INITIAL CALIBRATIONS:

Initial calibrations were within method criteria.

### OPENING CONTINUING CALIBRATIONS:

Opening continuing calibrations were within method criteria.

### CLOSING CONTINUING CALIBRATIONS:

Closing continuing calibrations were within method criteria or not applicable.

### SURROGATE RECOVERIES:

There were no surrogate outliers.

### METHOD BLANK OUTLIERS:

There are no method blank outliers.

### LCS OUTLIERS:

There are no LCS outliers.

### MS/MSD and DUP OUTLIERS:

As shown below, the matrix spike and matrix spike duplicate were outside of limits the target. The sample has a concentration greater than four times spike amount. In this case it is not appropriate to calculate a recovery. The result should be used as a replicate.

| Type | Client Sample | LabSample    | Analyte              | Recovery | LCL | UCL | Parent | Spike |
|------|---------------|--------------|----------------------|----------|-----|-----|--------|-------|
| MS   | Diesel Tank   | B0702099-01A | Diesel Range Organic | -801     | 50  | 129 | 6600   | 70.4  |
| MSD  | Diesel Tank   | B0702099-01A | Diesel Range Organic | -540     | 50  | 129 | 6600   | 70.4  |

Test Method: VOC by GC/FID via method 8015B - GRO - Solid

### HOLDING TIMES:

Holding times were met for this Test

## Case Narrative

*Analytica Environmental Laboratories, Inc.*

*Work Order: B0702099*

*(continued)*

Holding times were met for this Test

### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

### INSTRUMENT PERFORMANCE CHECKS:

Instrument checks were within method criteria.

### INITIAL CALIBRATIONS:

Initial calibrations were within method criteria.

### OPENING CONTINUING CALIBRATIONS:

Opening continuing calibrations were within method criteria.

### CLOSING CONTINUING CALIBRATIONS:

Closing continuing calibrations were within method criteria or not applicable.

### SURROGATE RECOVERIES:

There were no surrogate outliers.

### METHOD BLANK OUTLIERS:

There are no method blank outliers.

### LCS OUTLIERS:

There are no LCS outliers.

### MS/MSD and DUP OUTLIERS:

There are no MS/MSD or DUP outliers.

#### MS/MSD REPORT

Analysis: SVOC by GC/FID via method 8015B - DRO Parent: B0702099-01A  
Prep Date: 2/12/2007  
Samp. Anal. Date: 2/13/2007 9:27:18PM Units: mg/Kg  
MS Anal. Date: 2/13/2007 11:53:16PM MSD Anal. Date: 2/14/2007 2:19:20AM Matrix: Soil

| Analyte Name          | SampResult | MSRes. | MSDRes | SPLev | SPDLev | Recov. | MSD Rec. | RPD | Recov Lim | RPDLim | Flag          |
|-----------------------|------------|--------|--------|-------|--------|--------|----------|-----|-----------|--------|---------------|
| Diesel Range Organics | 6,600      | 6,040  | 6,220  | 70.4  | 70.4   | -795.1 | -539.6   | 2.9 | 50 - 129  | 20     | NOTE 2 NOTE 2 |

#### FOOTNOTES TO QC REPORT

Note 1: Results are shown to three significant figures to avoid rounding errors in calculations.

Note 2: If the sample concentration is greater than 4 times the spike level, a recovery is not meaningful, and the result should be used as a replicate. In such cases the spike is not as high as expected random measurement variability of the sample result itself.

Note 3: For sample duplicates, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample and duplicate results are not five times the PQL or greater, then the RPD is not expected to fall within the window shown and the comparison should be made on the basis of the absolute difference. Analytica uses the criterion that the absolute difference should be less than the PQL for water or less than 2XPQL for other matrices.

Note 4: For serial dilutions, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample result is not 50 times the MDL or greater, then the fact that the RPD does not meet the 10% criterion has little significance. Otherwise it indicates that a matrix bias may exist at the analytical step.

## Detailed Analytical Report

Client Project Number: none

### DATA FLAGS AND DEFINITIONS

The PQL is the Method Quantitation Limit as defined by USACE.

Reporting Limit: Limit below which results are shown as "ND". This may be the PQL, MDL, or a value between. See the report conventions below.

#### Result Field:

ND = Not Detected at or above the Reporting Limit

NA = Analyte not applicable (see Case Narrative for discussion)

#### Qualifier Fields:

LOW = Recovery is below Lower Control Limit

HIGH = Recovery, RPD, or other parameter is above Upper Control Limit

E = Reported concentration is above the instrument calibration upper range

#### Organic Analysis Flags:

B = Analyte was detected in the laboratory method blank

J = Analyte was detected above MDL or Reporting Limit but below the Quant Limit (PQL)

#### Inorganic Analysis Flags:

J = Analyte was detected above the Reporting Limit but below the Quant Limit (PQL)

W = Post digestion spike did not meet criteria

S = Reported value determined by the Method of Standard Additions (MSA)

Several ways of defining the limit of detection and quantitation are prevalent in the laboratory industry and may appear in Analytica reports. These include the following:

MRL = "minimum reporting level", from the EPA Safe Drinking Water program (SDW)

PQL = "practical quantitation limit", from SW-846

EQL = "estimated quantitation limit", from SW-846

LOQ = "limit of quantitation", from a number of authoritative sources

In Analytica's work, all of these terms have the same meaning, equivalent to the EPA definition of the MRL. This reporting level is supported by a satisfactory calibration data point which is at that level or lower, and also is supported by a method detection limit (MDL) determined by the procedure in 40CFR. The MDL is lower than the MRL and represents an estimate of the level where positive detections have a 99% probability of being real, but where quantitation accuracy is unknown.

The MRL as defined by Analytica is the lowest demonstrated point of known quantitation accuracy.

The MRL should not be confused with the MCL, which is the EPA-defined "maximum contaminant level" allowed for certain regulated targets under specific regulations, such as the National Primary Drinking Water Regulations. Normally, the MRL is set at a level which is much lower than the MCL in order to ensure that levels are well below those limits. Not all target analytes have MCL levels established.

Other Flags may be applied. See Case Narrative for Description

Cooler ID: 1

**A. Preliminary Examination Phase:**

Date cooler opened: 2/10/2007  
Cooler opened by: LQ

Signature: [Signature]

1. Was airbill Attached? Yes

Airbill #: 852537190230

Carrier Name: FedEx

2. Custody Seals? N/A

How many? 0 Location:

Seal Name:

3. Seals intact? Yes

4. COC Attached? Yes

Properly Completed? Yes

Signed by AEL employee? Yes

5. Project Identification from custody paper: RFTA-GWS

6. Preservative: BlueGel

Temperature: 4.6

Designated person initial here to acknowledge receipt:

[Signature] Date: 2/10/07

COMMENTS:

**B. Log-In Phase:** Samples Log-In Date: 2/12/2007 Log-In By: LQ

1. Packing Type: Bubblewrap

2. Were samples in separate bags? N/A

3. Were containers intact? Yes

Labels agree with COC? Yes

4. Number of bottles received: 4

Number of samples received: 2

5. Correct containers used? Yes

Correct preservatives added? N/A

6. Sufficient sample volume? Yes

7. Bubbles in VOA samples? N/A

8. Was Project manager called and status discussed? No

9. Was anyone called? No Who was called? \_\_\_\_\_ By whom? \_\_\_\_\_ Date: \_\_\_\_\_

#### Sample Identification

| Lab Sample Number | Client Description | Lab Sample Number | Client Description |
|-------------------|--------------------|-------------------|--------------------|
| B0702146-01       | Diesel Tank        |                   |                    |

Enclosed are the analytical results for the submitted sample(s). Please review the CASE NARRATIVE for a discussion of any data and/or quality control issues. Listings of data qualifiers, analytical codes, key dates, and QC relationships are provided at the end of the report.

Sincerely,

Joseph Egry  
Project Manager

*"The Science of Analysis, The Art of Service"*

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0702146

Samples were prepared and analyzed according to EPA or equivalent methods outlined in the following references:

Standard Method for Laboratory Determination of Water (Moisture) Content of Soil, Rock, and Soil-Aggregate Mixtures, ASTM D 2216-80, July 1980.

Test Methods for Evaluating Solid Waste, USEPA SW-846, Third Edition, Revision 4, December 1996.

### REVIEW FOR COMPLIANCE WITH ANALYTICA QA PLAN

A summary of our review is shown below, organized by test:

#### SAMPLE RECEIPT:

One sample was received at a temperature of 4.6 deg C at Analytica-Thornton on 2/10/2007 12:00:00 PM. The sample was received in good condition and in order per chain of custody.

Test Method: ASTM D2216 - Pmoist - Solid

All method criteria was met for this test.

Test Method: SW8270C - Semivolatile Organics by GC/MS - PAH - Solid

#### HOLDING TIMES:

Holding times were met for this Test

#### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

#### INSTRUMENT PERFORMANCE CHECKS:

Instrument checks were within method criteria.

#### INITIAL CALIBRATIONS:

Initial calibrations were within method criteria.

#### OPENING CONTINUING CALIBRATIONS:

One of the targets show %D values greater than 20% in the opening CCV shown below. The CCC's and the SPCC's are in control. The average %D in the CCV is less than 15%. Thus this CCV meets criteria.

| RunDate              | Data File  | Analyte              | Recovery | LCL | UCL |
|----------------------|------------|----------------------|----------|-----|-----|
| 2/23/2007 1:56:00 PM | 07022303.D | Benzo(g,h,i)perylene | 120.     | 80  | 120 |

#### CLOSING CONTINUING CALIBRATIONS:

There is a CCC out of limits in the closing CCV, as shown below. SW-846 does not require that closing CCVs meet criteria for internal standard analytical methods such as these. The calibration standard information is included to indicate the degree of analytical system degradation caused by the analysis of the samples. There are no negative consequences for data usability.

| RunDate               | Data File  | Analyte                | Recovery | LCL | UCL |
|-----------------------|------------|------------------------|----------|-----|-----|
| 2/23/2007 11:58:00 PM | 07022320.D | Benzo(g,h,i)perylene   | 136.     | 80  | 120 |
| 2/23/2007 11:58:00 PM | 07022320.D | Dibenzo(a,h)anthracene | 136      | 80  | 120 |
| 2/23/2007 11:58:00 PM | 07022320.D | Fluoranthene           | -C 78.1  | 80  | 120 |

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0702146

(continued)

2/23/2007 11:58:00 PM 07022320.D Indeno(1,2,3-cd)pyrene 133. 80 120

### INTERNAL STANDARD AREAS:

There were no Internal Standard outliers.

### SURROGATE RECOVERIES:

There were no surrogate outliers.

### METHOD BLANK OUTLIERS:

There are no method blank outliers.

### LCS OUTLIERS:

The LCS and LCSD shown below have one of the targets outside of control windows. These are high recoveries and Acenaphthylene is not detected in associated samples.

| Type | BatchNumber | Analyte        | Recovery | LCL | UCL | Status   |
|------|-------------|----------------|----------|-----|-----|----------|
| LCS  | T070222002  | Acenaphthylene | 160.     | 48  | 133 | Complete |
| LCSD | T070222002  | Acenaphthylene | 168.     | 48  | 133 | Complete |

### MS/MSD and DUP OUTLIERS:

The matrix spike and matrix spike duplicate recoveries shown below indicates a laboratory bias when considered with the LCS/LCSD recoveries shown above. In this case, the recoveries are elevated, and target is not detected in associated samples. Since the bias is high and target is not observed, the results are considered to be fully usable.

| Type | Client Sample | LabSample    | Analyte        | Recovery | LCL | UCL | Parent | Spike |
|------|---------------|--------------|----------------|----------|-----|-----|--------|-------|
| MS   | Diesel Tank   | B0702146-01A | Acenaphthylene | 171      | 48  | 133 | 0.00   | 1760  |
| MSD  | Diesel Tank   | B0702146-01A | Acenaphthylene | 178      | 48  | 133 | 0.00   | 1760  |

### FOOTNOTES TO QC REPORT

Note 1: Results are shown to three significant figures to avoid rounding errors in calculations.

Note 2: If the sample concentration is greater than 4 times the spike level, a recovery is not meaningful, and the result should be used as a replicate. In such cases the spike is not as high as expected random measurement variability of the sample result itself.

Note 3: For sample duplicates, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample and duplicate results are not five times the PQL or greater, then the RPD is not expected to fall within the window shown and the comparison should be made on the basis of the absolute difference. Analytica uses the criterion that the absolute difference should be less than the PQL for water or less than 2XPQL for other matrices.

Note 4: For serial dilutions, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample result is not 50 times the MDL or greater, then the fact that the RPD does not meet the 10% criterion has little significance. Otherwise it indicates that a matrix bias may exist at the analytical step.

Workorder (SDG): B0702146

Project: RFTA-GWS

Client: Waste Engineering, Inc.

Client Project Number: none

### DATA FLAGS AND DEFINITIONS

The PQL is the Method Quantitation Limit as defined by USACE.

Reporting Limit: Limit below which results are shown as "ND". This may be the PQL, MDL, or a value between. See the report conventions below.

#### Result Field:

ND = Not Detected at or above the Reporting Limit

NA = Analyte not applicable (see Case Narrative for discussion)

#### Qualifier Fields:

LOW = Recovery is below Lower Control Limit

HIGH = Recovery, RPD, or other parameter is above Upper Control Limit

E = Reported concentration is above the instrument calibration upper range

#### Organic Analysis Flags:

B = Analyte was detected in the laboratory method blank

J = Analyte was detected above MDL or Reporting Limit but below the Quant Limit (PQL)

#### Inorganic Analysis Flags:

J = Analyte was detected above the Reporting Limit but below the Quant Limit (PQL)

W = Post digestion spike did not meet criteria

S = Reported value determined by the Method of Standard Additions (MSA)

Several ways of defining the limit of detection and quantitation are prevalent in the laboratory industry and may appear in Analytica reports. These include the following:

MRL = "minimum reporting level", from the EPA Safe Drinking Water program (SDW)

PQL = "practical quantitation limit", from SW-846

EQL = "estimated quantitation limit", from SW-846

LOQ = "limit of quantitation", from a number of authoritative sources

In Analytica's work, all of these terms have the same meaning, equivalent to the EPA definition of the MRL. This reporting level is supported by a satisfactory calibration data point which is at that level or lower, and also is supported by a method detection limit (MDL) determined by the procedure in 40CFR. The MDL is lower than the MRL and represents an estimate of the level where positive detections have a 99% probability of being real, but where quantitation accuracy is unknown.

The MRL as defined by Analytica is the lowest demonstrated point of known quantitation accuracy.

The MRL should not be confused with the MCL, which is the EPA-defined "maximum contaminant level" allowed for certain regulated targets under specific regulations, such as the National Primary Drinking Water Regulations. Normally, the MRL is set at a level which is much lower than the MCL in order to ensure that levels are well below those limits. Not all target analytes have MCL levels established.

Other Flags may be applied. See Case Narrative for Description

COMMENTS:

**APPENDIX E - BOREHOLE LITHOLOGIC LOGS  
AND WELL COMPLETION**

Soil sampling involving Borings/Direct Push Points has not been performed at the  
Site or Requested by the OPS.

**APPENDIX F - WASTE DISPOSAL MANIFESTS**

Contaminated soil has not been generated at the site. Disposal has not occurred.

**APPENDIX G - SITE CLASSIFICATION CHECKLIST**

A site characterization has not been completed. As a result the site classification tables cannot be completed at this time.

**CLASSIFICATION 1 - CURRENT THREAT TO HUMAN HEALTH , SAFETY, OR SENSITIVE ENVIRONMENT**

|  | R | N | U | SUB | Threat                                                                                                                                                                                                              | Response Action                                                                                                                                                                |
|--|---|---|---|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  |   |   |   | 1.1 | Explosive levels, or concentrations of vapors that could cause acute health effects, are present in a residence or other building.                                                                                  | <i>Evacuate occupants, begin emergency abatement measures such as subsurface ventilation, or building pressurization or free product removal. Notify local fire authority.</i> |
|  |   |   |   | 1.2 | Explosive levels of vapors are present in subsurface utility system(s).                                                                                                                                             | <i>Evacuate vicinity immediately, begin emergency abatement measures such as ventilation.</i>                                                                                  |
|  |   |   |   | 1.3 | Free product is present in measurable quantities at ground surface, on surface water bodies, in utilities, or on surface water.                                                                                     | <i>Prevent further free product migration by appropriate containment measures, institute free product removal, restrict area access.</i>                                       |
|  |   |   |   | 1.4 | A water supply well, supply line, or surface intake is impacted** above action levels.                                                                                                                              | <i>Notify user(s) provide alternate water supply, control contaminated water and treat water at the point-of-use.</i>                                                          |
|  |   |   |   | 1.5 | Ambient vapor/particulate concentrations of concern from an acute exposure or safety viewpoint.                                                                                                                     | <i>Install a vapor barrier, remove the source, or restrict access to affected area.</i>                                                                                        |
|  |   |   |   | 1.6 | Surface water, storm water, or groundwater which is impacted** above action levels is discharging directly to a surface water body used for human drinking water or contact recreation, or a sensitive environment. | <i>Minimize extent of impact by containment measures, and implement habitat management to minimize exposures.</i>                                                              |

**CLASSIFICATION 2 - SHORT-TERM THREAT (0-6 MONTHS) TO HUMAN HEALTH, SAFETY, OR SENSITIVE ENVIRONMENT**

| T | R | N | U | SUB | Threat                                                                                                                                                                                                           | Response Action                                                                                                                                    |
|---|---|---|---|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
|   |   |   |   | 2.1 | Explosive vapor levels, or concentrations that could cause acute health effects, may accumulate in a residence or other buildings within six months.                                                             | <i>Assess the potential for vapor migration through monitoring/modeling and remove source, if necessary, or install a vapor migration barrier.</i> |
|   |   |   |   | 2.2 | Surficial soils impacted** above action levels, are exposed and less than 500 ft from public access, dwellings, parks, sensitive environment, playgrounds, day care centers, schools, or similar use facilities. | <i>Remove soils, cover area, or restrict access.</i>                                                                                               |
|   |   |   |   | 2.3 | A water supply well producing from the affected groundwater is impacted** above action levels, or is located less than 120 ft* down-gradient of the known extent of contamination.                               | <i>Notify owner/user, evaluate need for point-of-use water treatment, hydraulic control, or alternative water supply.</i>                          |
|   |   |   |   | 2.4 | Groundwater is impacted** above action levels and a water supply well producing from a different interval is within the known extent of contamination.                                                           | <i>Notify owner, monitor groundwater well quality and determine need for prevention of vertical migration to the supply well.</i>                  |
|   |   |   |   | 2.5 | Surface water, storm water, or groundwater, impacted** above action levels, discharges within 500 ft of a surface water body used for human drinking water or contact recreation, or a sensitive environment.    | <i>Begin containment measures. Restrict access to areas near discharge. Evaluate magnitude and impact to discharge area.</i>                       |
|   |   |   |   | 2.6 | Free product, of any measurable thickness on groundwater is discovered.                                                                                                                                          | <i>Prevent free product migration by appropriate containment measures. Begin free product removal immediately.</i>                                 |
|   |   |   |   | 2.7 | Groundwater impacted** above action levels is present offsite.                                                                                                                                                   | <i>Define extent and degree of contamination. Notify OIS of name and address of impacted parties.</i>                                              |

\* These distances are based on conservative assumptions for groundwater flow velocity. These distances can be adjusted provided supporting documentation is submitted to and approved by the OIS.

\*\*If the extent of contamination has not been defined the owner/operator must assume that all potential POEs are within the impacted area.

**Re: Petroleum Storage Tanks (PSTs) at the Roaring Fork Transit Agency, 2307  
Wulfsohn Road, Garfield County, Glenwood Springs, Colorado. Event ID 10241**

**Dear Mr. Decker:**

The Division of Oil and Public Safety (OPS) has reviewed the Site Characterization Report for the above referenced site that was received on April 30, 2007.

Based solely upon the information submitted, which shows that contamination levels are below state cleanup levels, OPS does not require any further investigation or remedial action at this time. If conditions change, OPS reserves the right to determine if any additional actions are necessary. This no further action (NFA) letter is in reference to the release reported on November 1, 2006.

**OPS cannot release you from any liability that may be associated with any contamination at or from this site.**

Please address correspondence regarding this site to me. If you have any questions call me at (303) 318-8532.

Sincerely,

A handwritten signature in black ink, appearing to read "B. Sonnier".

Re: Site Characterization Report for Roaring Fork Transportation Authority  
2307 Wulfsohn Rd Glenwood Springs, CO 81601 Facility ID# 15558

10428

Dear Mr. Sonnier:

Waste Engineering, Inc. (WEI) is submitting the attached Site Characterization Report (SCR) completed on behalf of Roaring Fork Transportation Authority (RFTA). The data obtained during our investigation is limited. At your request, we obtained one grab sample at a fill dispenser for an underground storage tank (UST) used to store new motor oil. The sample was obtained at approximately 1½ feet below ground surface. The samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), and oil and grease.

Due to the limited data collected at the Site, a majority of the information required in the SCR is not available.

Should you have any questions or require additional information, please do not hesitate to call.

Very truly yours,

WASTE ENGINEERING, INC.

By   
D. Craig Heydenberk  
Senior Environmental Scientist

# SITE CHARACTERIZATION REPORT (SCR) FILE COPY

Submit the completed SCR to:

Colorado Department of Labor and Employment  
Oil Inspection Section  
(Technical Reviewer's Name - if known)  
633 17<sup>th</sup> Street, Suite 500  
Denver, CO 80202-3660

This standardized format is required for all SCRs submitted to the Colorado Oil Inspection Section for releases occurring on or after February 1, 1999.

This SCR is intended to replace the Initial Site Characterization Report (ISCR). In addition to the information formerly included in the ISCR, it is required that the SCR define the extent of contamination. The SCR incorporates risk based corrective actions through Tier 1 or Tier 1A, as appropriate to the site. This report must be submitted in duplicate.

## IMPORTANT

**Refer to the OIS Owner/Operator Guidance Document for assistance in report preparation.**

**This report is required to be submitted within 90 days of the release.**

**If contamination has never been detected above Tier 1 and/or MCLs, a No Further Action Request (NFAR) Report may be submitted in place of this SCR.**

Date Report was completed: **October 22, 2007**

**INSTRUCTIONS FOR COMPLETING REPORT:** Complete all applicable sections and appendices of this report. If a question does not apply to the site, insert ANA=.

Limit your responses to the suggested space(s). If you are using the computer version of this form, the bracketed number after each question (e.g. [2]) is the number of suggested lines for each answer. Do not use bold type when answering, except as requested in the Tables of the Appendices. Insert rows in tables as needed, and delete any unused rows. Contact the Oil Inspection Section technical assistance line at (303) 318-8547 if you have any questions. The OIS Regulations, Guidance Document, Report Formats, and additional program related information can be found at the Oil Inspection Website at <http://oil.edle.state.co.us>. Call (303) 321-4164 for a copy of the Regulations (commodity # 615-82-44-0899) or the Guidance Document (commodity # 615-82-44-0626).

## SITE CHARACTERIZATION REPORT SUMMARY

What type of product was released? (Check all that apply) Leaded Gasoline \_\_\_ Unleaded Gasoline \_\_\_ Diesel \_\_\_ Waste Oil \_\_\_ Other X - New Motor Oil

Is there evidence of any released hazardous substance on the site? (If this is an AST release and it exceeds the RCRA level for TCLP benzene, it is a hazardous substance.) Yes \_\_\_ No X (check one). If yes, contact the Colorado Department of Public Health and Environment.

Does soil contamination exist? (check all that apply) Onsite X Offsite \_\_\_ If so, what is the vertical extent of soil contamination? From \_\_\_ ft to \_\_\_ ft (unknown). What is the soil type? Pea gravel bedding - Natural soil consists of alluvial silts, clays, and gravels.

Does groundwater contamination exist? (check all that apply) Onsite \_\_\_ Offsite \_\_\_ Unknown X  
The need for a groundwater evaluation has not been established.

Is free product present in the soil or groundwater? Yes \_\_\_ No \_\_\_ Unknown X  
The need for a groundwater evaluation has not been established.

What is the depth to groundwater (in feet)? Based on the difference in elevation between the Site and Colorado River - The depth to groundwater is estimated at 300 feet.

For each category, list the distance from the source to the nearest point of exposure (POE).  
Only list POEs within 1/4 mile of the site.

**A. RELEASE INFORMATION****1. History of this release.**

- a) Date of release (If actual release date is unknown, input the date that the release was first suspected). [1] August 1, 2007
- b) Date that OIS was notified of the suspected release. [1] August 1, 2007
- c) Date that the suspected release was confirmed. [1] August 1, 2007
- d) Date that OIS was notified of the confirmed release. [1] August 1, 2007
- e) Include the location of the release on Figure 1, Appendix C.

**2. How release was discovered.**

- a) Discovered at tank removal or closure in place (yes/no) No
- b) Discovered during subsurface investigation (yes/no) No
- c) Discovered as a result of release detection or system failure (yes/no) No
- d) Impacts discovered at off-site property (yes/no) No
- a) Other (describe) [1] The release was suspected by an OPS Inspector during his observation of replacement of overfill protection. Sampling and analysis of soil samples was requested.

**3. Release description.**

- b) Product(s) released [1] New motor oil.
- c) Quantity released [1] The quantity released is not known but would be limited to quantity released from the original overfill assembly.

**B. SITE HISTORY****1. List known historical uses of the site on the table below.**

| Type of Use and/or Business Name | Begin Date | End Date |
|----------------------------------|------------|----------|
| Bus Maintenance                  | 2002       | current  |
| Previously Undeveloped           |            |          |
|                                  |            |          |

2. Describe any previous releases at the site on the table below. No previous releases are known or have been reported.

| Date of Prior Release | Product | Quantity (gallons) | Source/Cause of Release (Identify location on Fig. 1) | No Further Action Letter Issued? (y/n) (If yes enter date) |
|-----------------------|---------|--------------------|-------------------------------------------------------|------------------------------------------------------------|
| ANA≡                  | ANA≡    | ANA≡               | ANA≡                                                  | ANA≡                                                       |
|                       |         |                    |                                                       |                                                            |

3. If a no further action letter has not been issued for a previous release explain on-going activities [1]. No previous releases are known or have been reported.

### C. RELEASE CONFIRMATION

1. Storage tank removal/closure in place. (Complete Section F-1 to describe tank excavation dimensions, soil laboratory results, etc.).

a) How many tanks were removed or closed in place? [1] No tanks have been removed or closed in place.

b) How many tanks remain on site which are in operation? [1] Two 10,000-gallon tanks remain on site and in operation. The site also includes an 850-gallon UST used to store waste oil. The new motor oil tank is 3,000-gallon.

c) How many tanks remain on site which have not been properly closed in place? 0 - Two 10,000-gallon tanks remain on site and in operation and an 850-gallon tank.

d) List on the table below information concerning tank removal/closure in place. (Tank # as identified on Figure 1 and/or Figure 2, Appendix C).

| Tank # | Date Removed or Closed | Indicate closed in place(I), removed (R) | Tank Condition (corrosion, holes, etc.) | Contamination Suspected? (y/n) | Samples Analyzed? (y/n) |
|--------|------------------------|------------------------------------------|-----------------------------------------|--------------------------------|-------------------------|
| ANA≡   | ANA≡                   | ANA≡                                     | ANA≡                                    | ANA≡                           | ANA≡                    |
|        |                        |                                          |                                         |                                |                         |
|        |                        |                                          |                                         |                                |                         |

- b) Were tank removal or closure in place activities performed in accordance with API recommended practice 1604, or equivalent? (yes/no) No If no, describe tank removal/closure in place activities? [1] No tanks have been removed or closed in place.
2. Subsurface investigation performed prior to a confirmed release, such as for a property transaction, or to confirm release detection or system failure. (Complete Section F-2 to describe soil boring installations, soil laboratory results, etc.). The release was suspected by an OPS Inspector during his observation of the replacement of overfill protection. Sampling and analysis of soil samples was requested.

## a) List on the table below information concerning site investigation.

| Sample #      | Date of Investigation | Contamination Suspected?<br>(y/n) | Samples Analyzed?<br>(y/n) |
|---------------|-----------------------|-----------------------------------|----------------------------|
| New Motor Oil | July 13, 2007         | N                                 | Y                          |
|               |                       |                                   |                            |
|               |                       |                                   |                            |

b) If this investigation was performed as the result of release detection or system failure what part of the UST system failed? [1] No - The release was suspected by OPS Inspector during replacement of overfill protection. Sampling and analysis of soil samples was requested.

- i. Was the system repaired? (yes/no) The overfill protection assembly will be replaced.
- ii. Date of repair. [1] Repairs have been made. The concrete will be replaced following review approval from the OPS.

## D. SITE CLASSIFICATION AND INITIAL RESPONSE/ABATEMENT

1. Site Classification Table. A site characterization has not been completed. As a result the site classification tables can not be completed.

a) Complete the Site Classification Table presented in Appendix G. See D.1

b) What is the current site classification? (1, 2, 2a, 3, 4) Unknown.

c) Has the site classification changed since the submittal of the Site Summary Form (SSF)? (As the extent of contamination is defined at the time of this report, the Site Classification Table will no longer contain unknown (U) threats). A Site Summary Report was requested by the OPS. The SSR was submitted to the OPS on September 5, 2007

d) What classification was indicated for the site on the SSF? (1, 2, 2a, 3, 4) See D.1

2. Initial response and abatement. (Did the site classification ever indicate the need for an emergency response? (yes/no) No (If yes, answer the following questions and include all supporting documentation such as required permits in Appendix H, and waste manifests in Appendix F.)

a) Was the presence of explosive vapors ever detected at the site? (yes/no) No.

- i. If yes what actions were taken to mitigate explosion risks? [2] See 2.a
- ii. Have these actions been completed? ANA≡

b) Was the presence of vapors or surficial particulates, in concentrations which may cause acute health effects, ever detected at the site? ANA≡

- i. If yes, what actions were taken to mitigate the acute health risks?
- ii. Have these actions been completed? ANA≡

c) **Was the presence of free product on the ground surface, surface water, exposed soils, or in utilities ever detected at the site?** Regarding ground surface and exposed soil – No. No surface water was observed. The need for a utility investigation has not been determined.

i. **If yes, what actions were taken to mitigate these conditions?** [2] ANA≡

ii. **Have these actions been completed?** (yes/no) ANA≡

d) **Was any water supply well, supply line, storm water, or surface water body ever impacted by the release?** (yes/no) The site is connected to city water. Supply lines have not been evaluated. Stormwater was not observed during the site investigation. Given the estimated distance to the Colorado River (800'), it is unlikely that the Colorado River has been impacted.

i. **If yes what actions were taken to mitigate the risk of exposure to these Points of Exposure (POEs)?** [2] ANA≡

ii. **Have these actions been completed?** (yes/no) ANA≡

e) **Are there any other site classification sub-classifications, which relate to potential emergency situations, as listed above (e.g., Sub-classification 2.1 - Explosive vapors may accumulate in buildings within six months) currently applicable to this site?** (yes/no) No.

i. **If yes, are activities underway or completed to mitigate these threats?** [2] ANA≡

ii. **Will mitigation activities be included in the corrective action plan (CAP)?** (yes/no) A CAP for this release has not been requested by the OPS.

## **E. FREE PRODUCT**

1. **Complete this section if free product has been discovered in wells, borings, or excavations.** A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

2. **Free Product in Wells or Borings** See E.1

a) **Provide information regarding free product located in wells or borings in Tables 4 and 5, Appendix B.**

b) **On what date was free product discovered?** [1] A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

c) **On what date was the OIS notified of the presence of free product?** [1] A site characterization involving wells and borings has not been completed. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

d) **Has free product been recovered?** (yes/no) No

e) **If so, what was the recovery method?** [2] ANA≡

f) What was the quantity recovered? [1] ANA≡

g) How was recovered free product disposed? [1] ANA≡

### 3. Free Product in Excavations

a) Provide information regarding free product discovered in excavations.

| Date Discovered | Location | Product Thickness | Recovery Method | Date Recovery Completed | Quantity Recovered |
|-----------------|----------|-------------------|-----------------|-------------------------|--------------------|
| ANA≡            | ANA≡     | ANA≡              | ANA≡            | ANA≡                    | ANA≡               |
|                 |          |                   |                 |                         |                    |
|                 |          |                   |                 |                         |                    |

Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

b) On what date was the OIS notified of the presence of free product? [1] ANA≡

c) How was recovered free product disposed? [1] ANA≡

## F. SOIL INVESTIGATION

1. Excavations. (Includes excavations, trenches and construction excavations.)

a) Excavation dimensions.

i. Complete the following table for each excavation.

Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

| Excavation #  | Length of Excavation | Width of Excavation | Depth of Excavation | Depth to Groundwater in Excavation (if present) |
|---------------|----------------------|---------------------|---------------------|-------------------------------------------------|
| New Motor Oil | 4 feet               | 4 feet              | 1.5 feet            | Not Present to 1.5                              |
|               |                      |                     |                     |                                                 |
|               |                      |                     |                     |                                                 |

ii. Plot the location of each excavation (include excavation #) on Figure 2, Appendix C.

b) Excavation Organic Vapor Meter (OVM) screening measurements.

i. List all OVM measurements on Table 1, Appendix B.

ii. Indicate the locations of OVM measurements (which did not have a laboratory analysis performed at the same location) on Figure 2a, Appendix C.

**c) Excavation Soil Sampling.**

- i. List all soil laboratory results on Table 2, Appendix B. Identify the locations where samples were obtained on Figure 2, Appendix C.
- ii. List the rationale for the sampling locations on Table 2, Appendix B.
- iii. Present geological observations including lithology in section J.
- iv. Were soils samples collected according to procedures filed with the OIS as part of the Listed Consultant program? Yes According to the OIS Owner/Operator Guidance Document? No If neither, describe soil sampling collection procedures. [3] Only one sample was requested by the OPS for this tank. The sample was collected near the original spill/overfill protection device.

**d) Soil Disposition**

- i. Complete the following table if any soils were excavated.

| Excavation Number | Cubic Yards of Contaminated* Soil Excavated | Disposition of Contaminated *Soil | Cubic Yards of Clean Soil Excavated | Disposition of Clean Soil |
|-------------------|---------------------------------------------|-----------------------------------|-------------------------------------|---------------------------|
| New Motor Oil     | 0                                           | 0                                 | 0                                   | 0                         |
|                   |                                             |                                   |                                     |                           |
|                   |                                             |                                   |                                     |                           |

\* Soil concentrations above Tier 1 RBSLs and 500 mg/kg TPH.

- ii. Attach waste disposal manifests in Appendix F. No soil disposal has occurred.

**e) If groundwater was detected in the excavation complete Section H.**

- f) Was extent defined to Tier 1 RBSLs and to the TPH threshold level of 500 mg/Kg? Yes If no, why not? [2]

**2. Soil Borings/Direct Push Points** Soil sampling involving Borings/Direct Push Points has not been performed at the Site or Requested by the OPS.**a) Borehole/direct push OVM screening.**

- i. Include the OVM screening measurements on the boring logs (Appendix E) for samples screened during the boring installations.
- ii. Indicate the locations of the borings (which did not have laboratory analyses of soil collected from the boring) on Figure 3a, Appendix C.

**b) Soil Sampling in the borehole/direct push points** See 2.0

- i. List all soil laboratory results on Table 2, Appendix B. Present boring locations on Figure 3, Appendix C.
- ii. List the rationale for the sampling locations on Table 2, Appendix B.
- iii. Present geological observations including lithology on the boring logs (Appendix E) and in section J.

iv. Were soils samples collected according to procedures filed with the OIS as part of the Listed Consultant program? ANA≡ According to the OIS Owner/Operator Guidance Document? ANA≡ If neither, describe soil sampling collection procedures. [3]

c) Soil Disposition

i. Were any contaminated soils generated during borehole installation activities? ANA≡ If yes, how were they disposed? [1] ANA≡

ii. If any contaminated soils were disposed, attach waste disposal manifests in Appendix F.

d) Was the extent of soil contamination defined to Tier 1 RBSLs and to the TPH threshold value of 500mg/Kg? Yes If no, why not? [2] A site characterization has not been performed or requested by the OPS.

G. SOIL VAPOR INVESTIGATION

1. Was the purpose of soil vapor sample collection to assist in defining the extent of petroleum hydrocarbon contamination in the subsurface? A soil vapor investigation has not been performed or requested by the OPS.

2. Was the purpose of soil vapor sample collection to identify threats to structures that may be impacted from soil vapors? ANA≡ If yes briefly describe rationale for selected locations and depths (e.g., proximity to source, soil types, utilities, etc.) [3]

3. How many samples were collected from each point? [1] ANA≡

4. Show the location of each sampling point on Figure 4, Appendix C. List sample results, sample location rationale, and depths on Table 3, Appendix B. ANA≡

5. What was the vapor point installation method? [2] ANA≡

6. What was the method of sample collection? [2] ANA≡

7. Were vapor samples collected according to procedures filed with the OIS as part of the Listed Consultant program? ANA≡ According to the OIS Owner/Operator Guidance Document? ANA≡ If neither, describe vapor sampling collection procedures. [3] ANA≡

H. GROUNDWATER INVESTIGATION

1. Were monitoring wells installed, and groundwater sampled? No – A groundwater investigation has not been performed or requested by the OPS.

a) What is the average depth to groundwater at the site? ANA≡

b) For each monitoring well completed at the site list information regarding surveyed elevation of the measuring point, depth to groundwater, depth to product and

groundwater elevation on Table 5, Appendix B. Present the locations of the monitoring wells, including groundwater elevation values on Figure 6, Appendix C.

- c) List all groundwater laboratory results on Table 4, Appendix B. Present monitoring well locations on Figure 5, Appendix C.
2. Was groundwater discovered in locations other than wells (e.g., tank excavations)? A groundwater investigation has not been performed or requested by the OPS
- a) At what locations (other than in wells) was groundwater discovered? [2] ANA≡
- b) Identify the locations where groundwater was discovered (other than in wells) on Figure 5, Appendix C or on Figure 2, Appendix C, as appropriate. If groundwater at these locations was sampled, provide the sample results on Table 4, Appendix B. If groundwater was not sampled at these locations, explain why not [2] ANA≡
- c) If excavation dewatering was necessary, provide volume data, manifests, discharge permits, and compliance sampling results in Appendix H.
3. Were groundwater samples collected according to procedures filed with the OIS as part of the Listed Consultant program? (yes/no) ANA≡ According to the OIS Owner/Operator Guidance Document? (yes/no) ANA≡ If neither, describe groundwater sample collection procedures. [3] A groundwater investigation has not been performed or requested by the OPS.
4. Has the extent of groundwater contamination been defined to concentrations below the MCLs? (yes/no) No If no, why not? [2] A groundwater investigation has not been performed or requested but the OPS.

## I. QUALITY ASSURANCE/QUALITY CONTROL

### 1. Sampling Handling

- a) Was all decontamination performed during this investigation in accordance with the QA/QC filed with the OIS as part of Listed Consultant program? Yes
- b) Was all decontamination performed during this investigation in accordance with the QA/QC as described in Owner/Operator guidance document? Yes

c) If the answer to both of the above is no, complete the following table.

| Equipment | Decontamination Method |
|-----------|------------------------|
| ANA≡      | ANA≡                   |
|           |                        |
|           |                        |

2. Provide all information regarding sample handling and shipping as instructed in Appendix D.

## J. GEOLOGY AND HYDROGEOLOGY

1. Regional Geology -within ½ mile (This information is required if minimal site specific data is available. If the site geology has been characterized, regional data should only be obtained, as necessary, to supplement site specific data).

a) What is the lithology and stratigraphy of the unsaturated and uppermost saturated intervals? [2] Surficial geology consists of unconsolidated alluvial materials. The alluvium includes sands, silts, and gravels.

b) Describe any features that may affect regional groundwater flow. [2] The Site is located approximately 850 feet south of the Colorado River.

c) What is the source of the information listed above? [1] Site observation and knowledge of area.

2. Site Geology (Using the data collected during excavation activities and the drilling logs located in Appendix E answer the following questions. If complex geology exists at the site, which a cross-section would help to illustrate, include it in Appendix E with the borings logs). ANA≡

a) What is the lithology and stratigraphy of the unsaturated and uppermost saturated intervals? [2] Unknown

b) Describe any features at the site which could affect groundwater flow such as the slope of the uppermost bedrock unit [2] Unknown

3. Regional Hydrogeology (within ½ mile) (This information is required if groundwater was not encountered during the site characterization. If groundwater was encountered, regional data should only be obtained, as necessary, to supplement site specific data). Based on the difference in elevation between the Site and Colorado River – The depth to Groundwater is estimated at 300 feet.

a) What is the average depth to groundwater? [1] Unknown

b) What is the average thickness of the uppermost saturated interval? [1] Unknown

c) What is the regional groundwater flow direction? [1] Unknown

- d) Is there evidence that the flow direction may vary? [1] Unknown
- e) What is the source of the information? [1] ANA≡
4. Site Hydrogeology A groundwater investigation has not been performed or requested by the OPS.
- a) What is the average depth to groundwater? [1] Unknown
- b) What is the average thickness of the uppermost saturated interval? [1] Unknown
- c) What is the groundwater flow direction? [1] Based on topography Groundwater Flow Direction is expected to be to the North.
- i. If there is evidence that flow direction varies, include groundwater elevation maps indicating the varying flow directions (Figure 6, Appendix C). Unknown
- ii. What is the suspected or known reason for this variation? [2] ANA≡
- iii. What is the most prevalent flow direction? [1] Based on topography the most prevalent flow direction is to the North.
- d) Complete the following table of aquifer parameters.

| Parameter                 | Value   | How Was This Value Estimated? (Include Identification Numbers of Wells Tested) |
|---------------------------|---------|--------------------------------------------------------------------------------|
| Hydraulic Gradient        | Unknown | Unknown                                                                        |
| Effective Porosity*       | Unknown | Unknown                                                                        |
| Hydraulic Conductivity*   | Unknown | Unknown                                                                        |
| Groundwater Flow Velocity | Unknown | Unknown                                                                        |

\*May be estimated based on soil types during Tier 1 only

## K. POINTS OF EXPOSURE

1. Property Boundary A Site Investigation involving the evaluation of the extent and degree of contamination has not been performed or requested by the OPS.
- a) What is the distance from the source of contamination to the nearest downgradient property boundary? [1] It is estimated at 125 feet.
- b) Provide the location of all site property boundaries on Figure 7, Appendix C.
2. Surficial Soils
- a) Is there reason to suspect that persons will come into contact with surficial soils containing contaminant concentrations not protective of exposure through dermal contact, inhalation, or ingestion? No
- b) If yes, what is the distance from the source to the nearest surficial soils that persons may come into contact with? ANA≡

- c) Indicate the location of all impacted surficial soils that persons may come into contact with on Figure 7, Appendix C.

### 3. Utilities

- a) Are there utilities that could potentially be impacted by the release? (yes/no) Yes
- b) Complete the information concerning all utilities both on-site and off-site on the table below and provide utility locations on Figure 7, Appendix C.

| Utility               | Depth to Water | Depth to Utility | Impacted (y/n) | Potential to be Impacted (y/n) |
|-----------------------|----------------|------------------|----------------|--------------------------------|
| Natural Gas Line      | Unknown        | 4'               | Unknown        | y                              |
| Water Line            | Unknown        | 8'               | Unknown        | y                              |
| Sanitary Sewer Line   | Unknown        | 8'               | Unknown        | y                              |
| Storm Sewer Line      | Unknown        | 8'               | Unknown        | y                              |
| Subsurface Power Line | Unknown        | 4'               | Unknown        | y                              |
| Communication Conduit | Unknown        | 4'               | Unknown        | y                              |
| Other (None)          | -              | -                | Unknown        | y                              |

- c) What is the distance from the source to the nearest impacted or potentially impacted utility? Approximately 30' to the North.
4. Structures (excludes structures that house a business which dispenses petroleum products as part of normal operations). A Site Investigation involving the evaluation of the extent and degree of contamination has not been performed or requested by the OPS.
- a) Are there structures that have been impacted by vapor migration from contaminated groundwater or soils? The occurrence of vapor migration was not noticed during or Site investigation or reported by onsite personnel.
- b) Are there structures that have the potential to be impacted by vapor migration from contaminated groundwater or soils? (yes/no) The occurrence of vapor migration was not noticed during or Site investigation or reported by onsite personnel.
- c) Present all structures, including those that have been impacted or have the potential to be impacted by vapor migration from either contaminated groundwater or soil on Figure 7, Appendix C.
