- d) What is the distance from the source to the nearest structure that has been impacted or has the potential to be impacted by vapor migration from contaminated groundwater or soils [1]. 25 feet.

**5. Groundwater Wells (excluding monitoring wells)** A groundwater well search has not been performed or requested by the OPS.

a) List the location and uses of all groundwater wells located within ½ mile of the site. Include this information on Table 6, Appendix B. Present the location of the wells on a U.S.G.S. 7.5' Quadrangle Topographic map (Figure 8, Appendix C).

b) How many groundwater wells are located downgradient and within ½ mile of the site? [1] Unknown

c) Is there a producing groundwater well whose radius of influence could affect groundwater flow at the site? (yes/no) Unknown

d) What is the distance from the source to the nearest downgradient groundwater well? [1] Unknown

**6. Surface Water/Sensitive Environments**

a) Identify the location of all surface water features (lakes, streams, wetlands, etc.) located within ½ mile of the site on Figure 8, Appendix C.

b) What is the distance from the source to the nearest downgradient surface water feature? [1] The Colorado River is located approximately 850 feet North of the Site.

**L. EXPOSURE PATHWAYS**

An evaluation of the extent and degree Characterization has not been performed or requested by the OPS. As a result, The Exposure Pathway Screening Criteria Table cannot be completed.

**a) Complete the Exposure Pathway Screening Criteria Table**

| <b>Exposure Pathway Screening Criteria - Bases for Eliminating Pathways</b>                                                                                                  | <b>Y</b> | <b>N</b> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|
| <b>Groundwater (Ingestion):</b>                                                                                                                                              |          |          |
| --Impacted groundwater concentrations are below MCLs, or                                                                                                                     |          |          |
| --Impacted water-bearing unit is designated as "non-usable" by the CWQCC, or                                                                                                 |          |          |
| --Groundwater plume is stable or diminishing within the property boundary (as demonstrated by four quarters of monitoring), and                                              |          |          |
| --There is no impact to a water supply well, (active or inactive), and                                                                                                       |          |          |
| --Dissolved oxygen concentrations are higher outside of the defined plume, and                                                                                               |          |          |
| --Groundwater flow velocity is <50 ft/year, and                                                                                                                              |          |          |
| --Transport modeling results are consistent with site observations.                                                                                                          |          |          |
| <b>Groundwater (Enclosed Space Vapors):</b>                                                                                                                                  |          |          |
| --Impacted groundwater concentrations are below MCLs, or                                                                                                                     |          |          |
| --No existing structure is within the influence of the contamination, or                                                                                                     |          |          |
| --There is an existing structure within the influence of the contamination, and the structure houses a business which dispenses petroleum products as part of its operation. |          |          |
| <b>Surficial Soils (Ingestion, Ambient Vapors, Particulates, Dermal Contact):</b>                                                                                            |          |          |
| --Impacted soils concentrations below Tier 1 limits, or                                                                                                                      |          |          |
| --Impacted soils have been removed from the site.                                                                                                                            |          |          |
| <b>Subsurface Soils (Enclosed Space Vapors):</b>                                                                                                                             |          |          |
| --Impacted soils are below Tier 1 limits, or                                                                                                                                 |          |          |
| --No existing structure is within the influence of the contamination.                                                                                                        |          |          |
| --There is an existing structure within the influence of the contamination, and the structure houses a business which dispenses petroleum products as part of its operation. |          |          |
| <b>Subsurface Soils (Leaching to Groundwater):</b>                                                                                                                           |          |          |
| --Impacted soils are below Tier 1 limits.                                                                                                                                    |          |          |

- b) Do the responses to the Exposure Pathway Screening Criteria Table indicate that any pathways may be eliminated from further consideration? (yes/no) Unknown**
- c) Are there any conditions not included in the table that may result in the elimination of any additional pathways? (yes/no) Unknown**
- d) If so, identify the pathway and conditions here. Any pathway elimination not specified in the table is subject to OIS approval. [4] ANA≡**
- e) For all pathways that may be eliminated, attach any supporting documentation (e.g., documentation of a "non-useable" designation by the CWQCC) in Appendix H.**

**f) What are the completed exposure pathways? See L.**

- i. Groundwater (Ingestion) (yes/no)**
- ii. Groundwater (Enclosed Space Vapors) (yes/no)**
- iii. Surficial Soils (Ingestion, Ambient Vapors, Particulates, Dermal Contact) (yes/no)**
- iv. Subsurface Soils (Enclosed Space Vapors) (yes/no)**
- v. Subsurface Soils (Leaching to Groundwater) (yes/no)**

**M. LAND USE**

- 1. All sites are considered under the residential land use classification unless the industrial classification is requested and approved by the OIS. Is an industrial classification being requested for this site? (yes/no) An Industrial land use may be appropriate.**
  - a) If yes, is the property and any currently or potentially impacted property currently zoned Industrial? (yes/no) The Site and surrounding property is zoned light industrial.**
  - b) If yes, has the OIS been added to the list of parties to be notified of any application for rezoning? (yes/no) No**
  - c) If yes, include official documentation of the addition of the OIS to this list (this documentation must indicate that the OIS will remain on the list until the OIS requests to be removed from the list). Include this documentation in Appendix H.**

**N. RISK BASED SCREENING LEVEL (RBSL) SELECTION**

A Site Characterization involving the evaluation of the extent and degree of soil contamination has not been performed or requested by the OPS.

1. Complete the following table to determine the appropriate RBSL(s) for the site. Refer to the OIS Storage Tank Regulations (7 C.C.R. 1101-14, Table 5-1) for the Tier 1 RBSL look-up table. If a "y" has been indicated in the Pathway Completed column, the RBSL and Source Concentration columns should be completed for every COC that exceeds the Tier 1 RBSL in Table 5-1. Consider the Land Use designation for the site to determine the correct RBSL for each completed pathway.

| Exposure Pathway                              | Pathway Completed (y/n) | Chemical of Concern (COC) | RBSL | Source Concentration |
|-----------------------------------------------|-------------------------|---------------------------|------|----------------------|
| Surficial Soil (mg/Kg)                        |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |
| Soil Leaching to groundwater (mg/Kg)          |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |
| Soil Vapor to Indoor Air (ug/m <sup>3</sup> ) |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |
| Groundwater to Indoor air inhalation (mg/l)   |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |
| Groundwater Ingestion (mg/l)                  |                         | Benzene                   |      |                      |
|                                               |                         | Toluene                   |      |                      |
|                                               |                         | Ethylbenzene              |      |                      |
|                                               |                         | Xylene                    |      |                      |

**2. RBSLs per media**

- a) Were both the Surficial Soil and Soil Leaching to Groundwater exposure pathways complete? (yes/no) If yes, the RBSLs for soil will be those for the Soil Leaching to Groundwater exposure pathway. Unknown
- b) Were both the Groundwater to Indoor Air Inhalation and Groundwater Ingestion pathways complete? (yes/no) If yes, the RBSLs for groundwater will be those for the Groundwater Ingestion exposure pathway. Unknown

**O. TOTAL PETROLEUM HYDROCARBONS (TPH)/POLYNUCLEAR AROMATIC HYDROCARBONS (PAH)**

A Site investigation involving the evaluation of the extent and degree of soil contamination has not been performed or requested by the OPS.

**1. Source concentrations**

a) Are all of the concentrations of the chemicals of concern (benzene, toluene, ethylbenzene, xylenes) associated with this release below the RBSLs or SS-RBSLs? (yes/no) Based upon the one soil sample collected at the Site, RBSLs for BTEX have not been exceeded.

b) Does the TPH concentration exceed the threshold value of 500 mg/Kg? No, the oil and grease concentration is 310 mg/Kg..

**2. PAH Evaluation - If both answers to question #1 above are yes, then a soil sample collected from the area believed to be the most contaminated must be analyzed for the 16 priority PAHs. For the following questions refer to the Tier 1 RBSL table for PAHs in the Owner/Operator Guidance Document.**

a) If the surficial soil pathway is complete at this site answer the following questions:

i. Do site PAH concentrations exceed the Tier 1 RBSLs for any compounds for the surficial soil pathway? PAH analysis was not requested by the OPS.

ii. If yes, list the compounds that exceed the RBSLs and the concentrations at which they remain on the site. ANA≡

b) If the subsurface soil leaching to groundwater pathway is complete at this site answer the following questions:

i. Do site PAH concentrations exceed the Tier 1 RBSLs for benz(a)-anthracene, dibenz(a,H)-anthracene or naphthalene compounds for the subsurface soil leaching to groundwater pathway? PAH analysis was not requested by the OPS.

ii. If yes, list the compounds at the site that exceed the RBSLs for the above compounds and the concentrations at which they remain on the site.

iii. Do PAH levels exceed the Tier 1 RBSLs for the 13 chemicals not specified in "i" above for the surficial soil pathway? (yes/no) PAH analysis was not requested by the OPS.

iv. If yes, list the compounds at the site that exceed the RBSLs for the above compounds and the concentrations at which they remain on the site. See O.2.b.iii.

c) If the groundwater volatilizing to indoor air pathway is complete at this site answer the following questions: A groundwater investigation has not been performed or requested by the OPS.

- i. Do site naphthalene concentrations exceed the Tier 1 RBSL for the groundwater volatilizing to indoor air pathway? (yes/no) Unknown
- ii. If yes, what is the concentration of naphthalene in groundwater remaining on the site? ANA≡

d) If the groundwater ingestion pathway is complete at this site answer the following questions: See O.2.c

- i. Do site benzo(a)-pyrene concentrations exceed the Tier 1 RBSL for the groundwater ingestion pathway? (yes/no) Unknown
- ii. If yes, what is the concentration of benzo(a)-pyrene in groundwater remaining on the site? Unknown

**P. TIER 1A**

1. Has a Tier 1A evaluation been performed for this site? (yes/no) No
2. Was there reason to believe, based on site conditions, that the collection of site-specific information would lead to a significantly different cleanup goal? (yes/no) Unknown
3. Were site-specific data collected to be used as input parameters into the Tier 1A Model? (For a Tier 1A evaluation, site-specific data must be collected from the site, or calculated from data collected from the site, as outlined in the Owner/Operator Guidance Document.) (yes/no) No

4. If site-specific input parameters were used to create Tier 1A SS-RBSLs, list those parameters on the following table and indicate the source of the data. Include locations where data are collected on the appropriate figure. A site characterization has not been performed or requested by the OPS.

| Parameter                         | Value | How Was This Value Determined? (Include Identification Numbers of Wells Tested, Location of Borings, etc.) |
|-----------------------------------|-------|------------------------------------------------------------------------------------------------------------|
| Depth to subsurface soil source   |       | Unknown                                                                                                    |
| Depth to groundwater              |       | Unknown                                                                                                    |
| Thickness of the capillary fringe |       | Unknown                                                                                                    |
| Thickness of the unsaturated zone |       | Unknown                                                                                                    |
| Length of source                  |       | Unknown                                                                                                    |

| Effective porosity                |       | Unknown                                                                                                    |

5. Attach the Tier 1A SS-RBSL table generated by inputting site specific data collected above into the Tier 1A Model (located on the OIS webpage)

#### Q. RECOMMENDATIONS

1. Are all source concentrations remaining at the site below RBSLs in soil and MCLs in groundwater? (yes/no) Unknown If yes, you may request no further action. A groundwater investigation has not been performed or requested by the OPS.
2. Are source concentrations remaining at the site above RBSLs in soil and/or MCLs in groundwater? (yes/no) An investigation involving evaluation of the extent a degree of soil contamination or groundwater evaluation has not been performed or requested by the OPS. If yes, do you recommend remediation to Tier 1 levels? (yes/no) Unknown What method(s) of remediation will you be evaluating in your corrective action plan (CAP)? [2] Unknown
3. Have you performed a Tier 1A evaluation? (yes/no) No Are all source concentrations remaining at the site below the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown  
If yes, you may request a no further action.

4. Have you performed a Tier 1A evaluation? (yes/no) No Are source concentrations remaining at the site above the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown If yes, do you recommend remediation to Tier 1A levels, or Tier 1 levels? (yes/no) Unknown What method(s) of remediation will you be evaluating in your CAP?[2] Unknown

5. Have you performed a Tier 1A evaluation? (yes/no) No Are source concentrations remaining at the site above the SS-RBSLs generated in the Tier 1A evaluation? (yes/no) Unknown If yes, do you recommend proceeding to a Tier 2 evaluation? (yes/no) Unknown What method(s) of remediation will you be evaluating in your CAP to cleanup to Tier 2 should site specific target levels be exceeded? [2] Unknown

**APPENDIX A - INSTRUCTIONS****1. TABLES (Appendix B)****Table 1 - Summary of Organic Vapor Meter Readings**

This table lists the results of field screening of soil samples with an Organic Vapor Meter (OVM). Information presented shall include sample location, OVM reading, sample depth (ft bgs), and an indication of whether the sample was analyzed at a laboratory.

**Table 2 - Summary of Soil Laboratory Results**

This table lists the results obtained from laboratory testing of soil samples. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations. If any analyte was detected which is not listed on this table, answer Ayes in the AOther column and attach the laboratory analytical reports for those analytes. Concentrations that exceed the Tier 1 RBSL for the soil leaching to groundwater pathway must be entered in bold type face. Also include on Table 2 the rationale for sample collection, using the codes listed in the footnote.

**TVPH = Total Volatile Petroleum Hydrocarbons**

**TEPH = Total Extractable Petroleum Hydrocarbons**

**TPH = Total Petroleum Hydrocarbons**

**Table 2a - Summary of PAH Soil Laboratory Results**

If a sample was analyzed for the priority PAHs the results obtained from the laboratory testing should be listed on this table. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations in mg/Kg. This analysis will only be required when the BTEX constituents are below site cleanup goals and TPH concentrations exceed 500mg/Kg.

**Table 3 - Summary of Vapor Laboratory Results**

This table lists the results obtained from laboratory testing of vapor samples. Information presented shall include sample designation, sample collection date, sample depth (ft bgs), and analyte concentrations. If any analyte was detected which is not listed on this table, answer Ayes= in the AOther= column and attach the laboratory analytical reports for those analytes. Also included on this table is the rationale for sample collection.

**Table 4 - Summary of Groundwater Laboratory Results**

This table must be included when water samples are collected and shall present the results obtained from laboratory testing of water samples. Information presented shall include sample designation, sample collection date, sample depth (depth below grade level when collected from an excavation), analyte concentrations, and analytical methods. If any analyte was detected which is not listed on this table, answer Ayes= in the AOther= column and attach the laboratory analytical reports for those analytes. Concentrations that exceed Colorado groundwater standards (MCLs) shall be presented in boldface type. Sample locations must be illustrated on Figure 5.

**Table 5 - Groundwater Elevation Table**

This table shall include the surveyed elevation of each well measured during this investigation, the date of the measurement, depth to water, depth to product, product thickness, product elevation, and the corrected elevation of the groundwater.

**Table 6 - Summary of Water Well Information**

This table shall include the results of a water well survey for wells located within 2 mile of the site. Information presented shall include the well number, geographic location (cadastral coordinates), approximate distance from site (if known), approximate compass direction from site (if known), use of each well, well depth, water level, and pumping rate. Wells down gradient of the site shall be presented in boldface type.

**2. FIGURES (Appendix C)**

Requirements common to all maps include the following: title block with figure number, site name, site address, date, scale, north arrow, and a legend. Distinct symbols should be used to differentiate varying sampling and analytical techniques (e.g. = Monitoring Well, = Borehole, = Geoprobe Point, = OVM locations,  $\Phi$  = laboratory data). All maps must be created to scale.

**Figure 1 - Site Map**

This map shall illustrate the important features at the site and the area immediately adjacent to the site. Include locations of property boundaries, fences, streets (with names), site buildings and adjacent structures, USTs/ASTs, piping runs and dispensers, and type of ground cover.

**Figure 2 - Excavation Sample Location Map**

This map shall illustrate the former locations of the tanks, and the sampling locations from within each tank excavation. For each of these sampling locations include a text box with sample depth and laboratory analytical results. Also include on the map the location of soils stockpiled. Clearly identify the dimensions of the excavation areas. Include features from Figure 1 as necessary for reference (e.g., major structures).

Diesel ex 4x5

Gas ex 5x9

**Figure 2a - OVM Screening Locations**

The one soil sample obtained at the Site was not screened using an OVM.

This map shall illustrate locations of samples collected for soil screening (as indicated in Table 2), which were not submitted to the laboratory for analysis. Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.). If the screened soils were submitted for analysis the location of the sample should not be identified on this figure, but should be placed on either Figure 2 or 3.

**Figure 3 - Soil Sample Location Map**

This map shall illustrate the sampling locations at the site (outside of the tank excavation(s)). Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.) For each of these sampling locations include a text box with sample depth and laboratory analytical results.

**Figure 4 - Vapor Sample Location Map**

A site investigation involving vapor sampling has not been performed or requested by the OPS.

This map shall illustrate the sampling locations at the site. Include features from Figure 1 as necessary for reference (e.g. major structures, excavations, etc.). For each of these sampling locations include a text box with sample depth and laboratory analytical results.

**Figure 5 - Groundwater Sample Location Map**

A site investigation involving a groundwater evaluation has not been performed or requested by the OPS.

This map shall illustrate the groundwater sampling locations at the site. Include features from Figure 1 as necessary for reference (e.g., major structures, excavations, etc.). For each of these sampling locations include a text box with laboratory analytical results.

**Figure 6 - Groundwater Elevation Map**

A site investigation involving a groundwater evaluation has not been performed or requested by the OPS.

This map shall illustrate the locations at which groundwater levels have been measured. Figure 1 may be used as a base map. Include the date of the measurement (separate maps must be created for individual measuring events) and the relative groundwater elevation.

**Provide groundwater elevation contours and an indication of the groundwater flow direction.**

#### **Figure 7 – POE Location Map**

A site investigation involving an evaluation of potential receptors has not been performed or requested by the OPS.

This figure will identify each property in the vicinity of the site which could potentially be affected by the release. The properties will be illustrated by land use (e.g., single family residential, vacant land, retail, dry cleaning, gas station, etc.). This figure will also identify all potential POEs (property boundaries, surficial soils, subsurface utilities, groundwater wells and surface water features/sensitive environments).

#### **Figure 8 – Area Surface Water, Groundwater, Topographical Map**

This map is used to provide regional topographic and POE information. Include a portion of a U.S.G.S. 7 2' Quadrangle Topographic Map or equivalent, measuring a minimum of six inches by six inches with the site located in the middle of the six inch by six inch section. The map shall include a scale (approximately 1" = 2,000'), distinct site location marker, and geographic contour intervals. Clearly identify surface water features and water wells (excluding monitoring wells) within ½-mile radius of the site. Provide a text box with the associated permit number (as indicated in Table 6) of each water well location.

Note: A groundwater well inventory has not been performed or requested by the OPS.

### **3. LABORATORY DOCUMENTATION (Appendix D)**

Chain of Custody forms which accompany samples for laboratory analyses are required to contain the following information: site name and address, sample number, date and time sampled, matrix description (e.g. soil, water), container size, type and decontamination status (e.g. 40 ml laboratory decontaminated amber glass VOA vial), preservation method (e.g. HCl 5%, 4E C), date and method of transport to laboratory (e.g. hand delivered, Fed Ex etc.), analyte and methodology of analyses requested (e.g. Total Extractable Petroleum Hydrocarbons (TEPH) by EPA Method 8015 Modified), and the name and signature of the person collecting the samples. Also attach all laboratory reports, and laboratory quality assurance/quality control reports.

### **4. BOREHOLE LITHOLOGIC LOGS AND WELL COMPLETION (Appendix E)**

A site investigation involving borehole has not been performed or requested by the OPS.

Boring logs must include the site name and address, boring number, date completed, surface elevation, depth, borehole diameter, initial and static water levels (if available), drilling method, sampling method, lithologic graphic to scale, an indication of the intervals from which samples were obtained, results of VOC screening, and a geologic description and/or Unified Soil Classification System (USCS) class of each rock or soil type encountered including any staining or petroleum odors.

The following additional information should be included with the lithologic logs if a well has been completed. Include the total depth of the well, the casing elevation, the diameter of the well casing, the well casing material (e.g. PVC, stainless steel), the length and depth

of the screened interval, the size and type of perforations of the screen (e.g. 0.010" milled slots), the type of filter pack material placed in the well (e.g. 10-20 mesh washed silica sand), the type of annular seal (e.g. 1/2" bentonite pellets), the type of grout used to fill the remaining annular space (e.g. Portland cement 5% bentonite), the type of well casing cap, the method of securing the well casing cap, and the type of protective surface casing. Also included should be a well completion graphic to scale which indicates the depth to the top of the filter pack, the depth to the top of the annular seal, and the location of the screened interval.

Also included in Appendix E should be any cross-sections completed to illustrate site conditions.

#### **5. WASTE DISPOSAL MANIFESTS (Appendix F)**

Contaminated soil removal has not been performed or requested by the OPS.

Attach copies of all manifests provided by transporters, landfills, treatment facilities, etc.

#### **6. SITE CLASSIFICATION CHECKLIST (Appendix G)**

To complete the Site Classification Checklist, place a check in the Threat (T) box if the situation, designated by sub-class (SUB), exists at the site. If the threat does not exist, check the N box. The U box should only have been checked when the Site Classification Checklist was submitted with the Site Summary Form. Upon completion of this report all conditions which exist at the site should be known. Check the Response (R) box if an appropriate response action has been completed for the existing condition at the site. If the response action has been completed and the threat no longer exists, the site classification will be the classification of the next most highly listed threat. The site will be classified by the first table where a threat box has been checked and an appropriate response has not been completed. However, complete the entire form and perform appropriate response actions for each condition which exists at the site. Complete response actions in order of highest priority (1 being the highest).

#### **7. SUPPORTING DOCUMENTATION (Appendix H)**

Attach all supporting documentation as required (e.g., permits for initial response and abatement activities, industrial zoning designation, water quality designation, etc.).

**APPENDIX B - TABLES**

**TABLE 1- SUMMARY OF ORGANIC VAPOR METER READINGS**

OVM measurements were not taken during our site investigation, as an OVM meter was not readily available.

| Sample Location I.D. | Date | Sample Depth (ft) | OVM Reading (ppm) | Laboratory Analyzed (y/n) |
|----------------------|------|-------------------|-------------------|---------------------------|
| N/A                  | N/A  | N/A               | N/A               | N/A                       |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |
|                      |      |                   |                   |                           |

N/D = Not Detected

N/A = Not Analyzed

Packet Page 1528

[illegible]

Identify any sample results which exceed Tier 1 RBSLs for soil leaching to groundwater pathway or 500mg/Kg TPH by presenting those results in bold typeface.  
 N/D = Less than the stated laboratory detection limit  
 N/A = Not Analyzed

Dezember 1991 - 1992

If yes, list other analytes detected in a separate table

\*\*\*\*Rationale – Release confirmation (RC), In plume (IP), Upgradient (UG), Downgradient (DG), Point of Compliance (POC), Post excavation (PE), Define extent (DE), W. characterization (WC)

### TABLE 3 - SUMMARY OF VAPOR LABORATORY RESULTS

| A site characterization involving an evaluation of vapors has not been performed or requested by the OPS. |   |
|-----------------------------------------------------------------------------------------------------------|---|
| 1                                                                                                         | 2 |

[illegible]

N/D = Less than the stated laboratory detection limit

N/A = Not Analyzed

\* If "yes", list other analytes detected in a separate table

Rationale – Assist in defining extent (DE), Identify threats to points of exposure (POE)

**TABLE 4 - SUMMARY OF GROUNDWATER LABORATORY RESULTS**

A site characterization involving wells and borings has not been completed or observed by the OPS. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS

[illegible]

Identify any sample results which exceed Colorado Groundwater Standards (MCLs) by presenting those results in bold typeface.  
N/D = Less than the stated laboratory detection limit

\* If [ yes ], list other analytes detected in a separate table

\*\*Rationale – Release confirmation (RC), In plume (IP), Up

Waste characterization (WC)

**TABLE 5 - GROUNDWATER ELEVATION**

A site characterization involving wells and borings has not been completed or requested by the OPS. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS

[illegible]

A site characterization involving wells and borings has not been completed or requested by the OPS. Free product was not observed to a maximum depth excavated at the site of 1.5 feet BGS.

[illegible]

\*Information from the Colorado Division of Water Resources

Indicate any wells which appear to be downgradient of the site in bold typeface.

Uses: Q = Other I Use OM = Other Uses/M

Uses: 0 = Other Use, OM = Other Use (Monitoring Well), 1 = Agricultural, 3 = Commercial Use, 8 = Domestic Use, 9 = Livestock Use

#### Sample Identification

| Lab Sample Number | Client Description | Lab Sample Number | Client Description |
|-------------------|--------------------|-------------------|--------------------|
| B0707088-01       | W 0 @ 1.5'         |                   |                    |

Enclosed are the analytical results for the submitted sample(s). Please review the CASE NARRATIVE for a discussion of any data and/or quality control issues. Listings of data qualifiers, analytical codes, key dates, and QC relationships are provided at the end of the report.

Sincerely,

Joseph Egry  
Project Manager

*"The Science of Analysis, The Art of Service"*

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0707088

Samples were prepared and analyzed according to EPA or equivalent methods outlined in the following references:

USEPA Method 1664, EPA-821-B-94-004b, N-Hexane Extractable Material (HEM) and Silica Gel Treated N-Hexane Extractable Material (SGT-HEM) by Extraction and Gravimetry (Oil and Grease and Total Petroleum Hydrocarbons), April 1995.

Test Methods for Evaluating Solid Waste, USEPA SW-846, Third Edition, Revision 4, December 1996.

Standard Method for Laboratory Determination of Water (Moisture) Content of Soil, Rock, and Soil-Aggregate Mixtures, ASTM D 2216-80, July 1980.

### REVIEW FOR COMPLIANCE WITH ANALYTICA QA PLAN

A summary of our review is shown below, organized by test:

#### SAMPLE RECEIPT:

One sample was received at a temperature of 3.3 deg C at Analytica-Thornton on 7/12/2007 9:50:00 AM. Custody seals were not present on the shipping container when received by the laboratory.

Test Method: 1664 FOR SOILS - Total - Solid

#### HOLDING TIMES:

Holding times were met for this Test

#### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

#### METHOD BLANK OUTLIERS:

There are no method blank outliers.

#### LCS OUTLIERS:

There are no LCS outliers.

#### MS/MSD and DUP OUTLIERS:

There are no MS/MSD or DUP outliers.

Test Method: Aromatic VOCs by GC/PID via method 8021B - BTEX - Solid

#### HOLDING TIMES:

Holding times were met for this Test

#### SAMPLE PREPARATION ISSUES AND OBSERVATIONS:

There were no unusual observations.

#### INSTRUMENT PERFORMANCE CHECKS:

Instrument checks were within method criteria.

#### INITIAL CALIBRATIONS:

Initial calibrations were within method criteria.

#### OPENING CONTINUING CALIBRATIONS:

## Case Narrative

Analytica Environmental Laboratories, Inc.

Work Order: B0707088

(continued)

The opening and closing CCVs are in control for the targets.

| RunDate              | Data File  | Analyte              | Recovery | LCL | UCL |
|----------------------|------------|----------------------|----------|-----|-----|
| 7/25/2007 6:23:00 PM | 07072502.D | p-Bromofluorobenzene | 72.1     | 85  | 115 |

### CLOSING CONTINUING CALIBRATIONS:

| RunDate               | Data File  | Analyte              | Recovery | LCL | UCL |
|-----------------------|------------|----------------------|----------|-----|-----|
| 7/26/2007 12:33:00 AM | 07072512.D | p-Bromofluorobenzene | 68.0     | 85  | 115 |

### SURROGATE RECOVERIES:

The LCS and LCSD have the surrogate outside of control windows. All associated samples have normal surrogate recoveries and the LCS and LCSD have normal target recoveries.

| Sample | LabID           | Surrogate            | Recovery | LCL | UCL          |
|--------|-----------------|----------------------|----------|-----|--------------|
| LCS    | T070730022-LCS  | p-Bromofluorobenzene | 73.      | 77  | 120 Complete |
| LCSD   | T070730022-LCSD | p-Bromofluorobenzene | 72.      | 77  | 120 Complete |

### METHOD BLANK OUTLIERS:

There are no method blank outliers.

### LCS OUTLIERS:

There are no LCS outliers.

### MS/MSD and DUP OUTLIERS:

There are no MS/MSD or DUP outliers.

Test Method: ASTM D2216 - Pmoist - Solid

All method criteria was met for this test.

|-----------------------------|------------|---------|--------|-------|-------|--------|----------|-----|-----------|--------|------|
| Hexane-Extractable Material | ND         | 782     | 790    | 800   | 800   | 97.8   | 98.8     | 1.0 | 61 - 133  | 20     |      |

#### MS/MSD REPORT

Analysis: 1664 FOR SOILS - Total

Parent: B0707088-01A

Prep Date: 7/13/2007

Samp. Anal. Date: 7/13/2007 1:00:00PM

Units: mg/Kg

MS Anal. Date: 7/13/2007 1:00:00PM MSD Anal. Date: 7/13/2007 1:00:00PM Matrix: Soil

| Analyte Name                | SampResult | MSRes. | MSDRes | SPLv | SPDLv | Recov. | MSD Rec. | RPD | Recov Lim | RPDLim | Flag |
|-----------------------------|------------|--------|--------|------|-------|--------|----------|-----|-----------|--------|------|
| Hexane-Extractable Material | 307        | 1,130  | 1,230  | 821  | 821   | 100.3  | 112.5    | 8.5 | 70 - 130  | 20     |      |

#### FOOTNOTES TO QC REPORT

Note 1: Results are shown to three significant figures to avoid rounding errors in calculations.

Note 2: If the sample concentration is greater than 4 times the spike level, a recovery is not meaningful, and the result should be used as a replicate. In such cases the spike is not as high as expected random measurement variability of the sample result itself.

Note 3: For sample duplicates, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample and duplicate results are not five times the PQL or greater, then the RPD is not expected to fall within the window shown and the comparison should be made on the basis of the absolute difference. Analytica uses the criterion that the absolute difference should be less than the PQL for water or less than 2XPQL for other matrices.

Note 4: For serial dilutions, if the result is less than the PQL, the duplicate RPD is not applicable. If the sample result is not 50 times the MDL or greater, then the fact that the RPD does not meet the 10% criterion has little significance. Otherwise it indicates that a matrix bias may exist at the analytical step.

Client: Waste Engineering, Inc.

Client Project Number: none

### DATA FLAGS AND DEFINITIONS

The PQL is the Method Quantitation Limit as defined by USACE.

Reporting Limit: Limit below which results are shown as "ND". This may be the PQL, MDL, or a value between. See the report conventions below.

#### Result Field:

ND = Not Detected at or above the Reporting Limit

NA = Analyte not applicable (see Case Narrative for discussion)

#### Qualifier Fields:

LOW = Recovery is below Lower Control Limit

HIGH = Recovery, RPD, or other parameter is above Upper Control Limit

E = Reported concentration is above the instrument calibration upper range

#### Organic Analysis Flags:

B = Analyte was detected in the laboratory method blank

J = Analyte was detected above MDL or Reporting Limit but below the Quant Limit (PQL)

#### Inorganic Analysis Flags:

J = Analyte was detected above the Reporting Limit but below the Quant Limit (PQL)

W = Post digestion spike did not meet criteria

S = Reported value determined by the Method of Standard Additions (MSA)

Several ways of defining the limit of detection and quantitation are prevalent in the laboratory industry and may appear in Analytica reports. These include the following:

MRL = "minimum reporting level", from the EPA Safe Drinking Water program (SDW)

PQL = "practical quantitation limit", from SW-846

EQL = "estimated quantitation limit", from SW-846

LOQ = "limit of quantitation", from a number of authoritative sources

In Analytica's work, all of these terms have the same meaning, equivalent to the EPA definition of the MRL. This reporting level is supported by a satisfactory calibration data point which is at that level or lower, and also is supported by a method detection limit (MDL) determined by the procedure in 40CFR. The MDL is lower than the MRL and represents an estimate of the level where positive detections have a 99% probability of being real, but where quantitation accuracy is unknown.

The MRL as defined by Analytica is the lowest demonstrated point of known quantitation accuracy.

The MRL should not be confused with the MCL, which is the EPA-defined "maximum contaminant level" allowed for certain regulated targets under specific regulations, such as the National Primary Drinking Water Regulations. Normally, the MRL is set at a level which is much lower than the MCL in order to ensure that levels are well below those limits. Not all target analytes have MCL levels established.

Other Flags may be applied. See Case Narrative for Description

# Cooler Receipt Form

Client: Waste Engineering, Inc.  
Project: RFTA

Client Code: 022120

Order #: B0707088

Cooler ID: 1

A. Preliminary Examination Phase:

Date cooler opened: 7/12/2007  
Cooler opened by: GP

Signature: [Signature]

1. Was airbill Attached? Yes

Airbill #: 861692557975

Carrier Name: FedEx

2. Custody Seals? No

How many? 0

Location:

Seal Name:

3. Seals intact? Yes

4. COC Attached? Yes

Properly Completed? Yes

Signed by AEL employee? Yes

5. Project Identification from custody paper: RFTA

6. Preservative: WetIce

Temperature: 3.3

Designated person initial here to acknowledge receipt:

[Signature] Date: 7/12/07

COMMENTS:

Log-In Phase:

Samples Log-In Date: 7/12/2007 Log-In By: LQ

1. Packing Type: Other

2. Were samples in separate bags? N/A

3. Were containers intact? Yes

Labels agree with COC? Yes

4. Number of bottles received: 3

Number of samples received: 1

5. Correct containers used? Yes

Correct preservatives added? Yes

6. Sufficient sample volume? Yes

7. Bubbles in VOA samples? N/A

8. Was Project manager called and status discussed? No

9. Was anyone called? No Who was called?

By whom?

Date:

COMMENTS:

**APPENDIX E - BOREHOLE LITHOLOGIC LOGS  
AND WELL COMPLETION**

Soil sampling involving Borings/Direct Push Points has not been performed at the Site or Requested by the OPS.

**APPENDIX F - WASTE DISPOSAL MANIFESTS**

Contaminated soil has not been generated at the site. Disposal has not occurred.

## APPENDIX G - SITE CLASSIFICATION CHECKLIST

A site characterization has not been completed. As a result the site classification tables cannot be completed at this time.

**CLASSIFICATION 1 - CURRENT THREAT TO HUMAN HEALTH , SAFETY, OR SENSITIVE ENVIRONMENT**

|  | R | N | U | SUB | Threat                                                                                                                                                                                                              | Response Action                                                                                                                                                                |
|--|---|---|---|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  |   |   |   | 1.1 | Explosive levels, or concentrations of vapors that could cause acute health effects, are present in a residence or other building.                                                                                  | <i>Evacuate occupants, begin emergency abatement measures such as subsurface ventilation, or building pressurization or free product removal. Notify local fire authority.</i> |
|  |   |   |   | 1.2 | Explosive levels of vapors are present in subsurface utility system(s).                                                                                                                                             | <i>Evacuate vicinity immediately, begin emergency abatement measures such as ventilation.</i>                                                                                  |
|  |   |   |   | 1.3 | Free product is present in measurable quantities at ground surface, on surface water bodies, in utilities, or on surface water.                                                                                     | <i>Prevent further free product migration by appropriate containment measures, institute free product removal, restrict area access.</i>                                       |
|  |   |   |   | 1.4 | A water supply well, supply line, or surface intake is impacted** above action levels.                                                                                                                              | <i>Notify user(s) provide alternate water supply, control contaminated water and treat water at the point-of-use.</i>                                                          |
|  |   |   |   | 1.5 | Ambient vapor/particulate concentrations of concern from an acute exposure or safety viewpoint.                                                                                                                     | <i>Install a vapor barrier, remove the source, or restrict access to affected area.</i>                                                                                        |
|  |   |   |   | 1.6 | Surface water, storm water, or groundwater which is impacted** above action levels is discharging directly to a surface water body used for human drinking water or contact recreation, or a sensitive environment. | <i>Minimize extent of impact by containment measures, and implement habitat management to minimize exposures.</i>                                                              |

**CLASSIFICATION 2 - SHORT-TERM THREAT (0-6 MONTHS) TO HUMAN HEALTH, SAFETY, OR SENSITIVE ENVIRONMENT**

| T | R | N | U | SUB | Threat                                                                                                                                                                                                           | Response Action                                                                                                                                    |
|---|---|---|---|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
|   |   |   |   | 2.1 | Explosive vapor levels, or concentrations that could cause acute health effects, may accumulate in a residence or other buildings within six months.                                                             | <i>Assess the potential for vapor migration through monitoring/modeling and remove source, if necessary, or install a vapor migration barrier.</i> |
|   |   |   |   | 2.2 | Surficial soils impacted** above action levels, are exposed and less than 500 ft from public access, dwellings, parks, sensitive environment, playgrounds, day care centers, schools, or similar use facilities. | <i>Remove soils, cover area, or restrict access.</i>                                                                                               |
|   |   |   |   | 2.3 | A water supply well producing from the affected groundwater is impacted** above action levels, or is located less than 120 ft* down-gradient of the known extent of contamination.                               | <i>Notify owner/user, evaluate need for point-of-use water treatment, hydraulic control, or alternative water supply.</i>                          |
|   |   |   |   | 2.4 | Groundwater is impacted** above action levels and a water supply well producing from a different interval is within the known extent of contamination.                                                           | <i>Notify owner, monitor groundwater well quality and determine need for prevention of vertical migration to the supply well.</i>                  |
|   |   |   |   | 2.5 | Surface water, storm water, or groundwater, impacted** above action levels, discharges within 500 ft of a surface water body used for human drinking water or contact recreation, or a sensitive environment.    | <i>Begin containment measures. Restrict access to areas near discharge. Evaluate magnitude and impact to discharge area.</i>                       |
|   |   |   |   | 2.6 | Free product, of any measurable thickness on groundwater is discovered.                                                                                                                                          | <i>Prevent free product migration by appropriate containment measures. Begin free product removal immediately.</i>                                 |

Re: The suspected release during the replacement of overfill protection at the Roaring Fork Transportation Authority, 2307 Wulfsohn Rd., Glenwood Springs, Garfield County, Colorado. (Event ID 10428)

Dear Mr. Decker:

The Division of Oil and Public Safety (OPS) has reviewed the Site Characterization Report for the above referenced site that was received on October 25, 2007.

Based solely upon the information submitted, which shows that contamination levels are below state cleanup levels, OPS does not require any further investigation or remedial action at this time. If conditions change, OPS reserves the right to determine if any additional actions are necessary. This no further action (NFA) letter is in reference to the suspected release during the replacement of overfill protection.

**OPS cannot release you from any liability that may be associated with any contamination at or from this site.**

Please address correspondence regarding this site to me. If you have any questions call me at (303) 318-8524.

Sincerely,

**Subject: Spill Bucket Repair Assessment,  
RFTA Maintenance Facility, Glenwood Springs CO**

Dear Mr. Sarno:

On November 6, 2019, Palisades Technology and Management, LLC (PTM) conducted a limited assessment at the Roaring Fork Transit Authority (RFTA) maintenance facility located at 2301 Wulfsohn Road in Glenwood Springs, Colorado. This assessment was performed in conjunction with repairs to the spill buckets on three underground storage tanks (USTs) at the site.

During testing of the spill buckets, it was reported that the bucket on the oil UST test failed and testing could not be performed on the unleaded or diesel spill buckets as the fill pipe could not be removed. Due to these uncertainties, PTM was onsite during the repair work to assess the potential for a release.

The PTM representative observed the excavation of the fill pipe and spill bucket of the three USTs and performed visual inspection and screening of soils with a photoionization detector (PID) to assess the potential for a release of petroleum products to the subsurface. No stained soils or odors were noted surrounding or under the spill bucket on the three USTs. PID readings from soil (tank bedding) collected during excavation activities was non-detect for organic vapors. Additionally, a visual inspection of the top of the oil UST was performed due to the failure of the spill bucket. No evidence of a release of oil was observed on the top of the tank or in tank bedding between the spill bucket and the top of the tank.

No additional action is required by RFTA as no evidence of a release was observed during the limited assessment. If you have questions or concerns, please contact the undersigned.

Sincerely,

A handwritten signature in blue ink that reads "David M Cox".

Where product piping has been altered, cut or disassembled and removed to allow replacement of containment sumps, show amount replaced below.

Piping must be precision tightness tested following repair and before returning to service.

Re: No Further Action (NFA) Determination for RFTA-Roaring Fork Transit Agency, 2307 Wulfsohn Road, Glenwood Springs, Garfield County, Colorado. (Event ID 13464, Facility ID 15558)

Dear Ms. Henderson:

The Division of Oil and Public Safety (OPS) has reviewed the NFA request for the referenced site received on February 26, 2020.

Based solely upon the information submitted regarding the diesel, regular unleaded, and lube oil spill buckets that failed hydrostatic testing (15558-1, 15558-2, 15558-3), OPS will require no further action at this time. If conditions change, OPS reserves the right to determine if any additional actions are necessary. This NFA letter is in reference to the confirmed release reported to OPS on August 14, 2019.

**OPS cannot release you from any liability that may be associated with any contamination at or from this site.**

Please address correspondence regarding this site to me and if you have any questions, please contact me at 303-318-8519 or via email at [hannah.phillips@state.co.us](mailto:hannah.phillips@state.co.us).

Sincerely,

*K. Hannah Williams*

**AST Closure Narrative  
Former Glenwood Springs Municipal Operations Center  
2301 Wulfsohn Road, Glenwood Springs, Colorado  
Event ID: 13987, Facility ID: 15748**

**Introduction**

ERO Resources Corporation (ERO) has completed this narrative, on behalf of the Roaring Fork Transportation Authority (RFTA), to document ERO's oversight of the removal of an aboveground storage tank (AST) and two fuel dispensers from the former City of Glenwood Springs Municipal Operation Center (MOC) located at 2301 Wulfsohn Road in Glenwood Springs, Colorado (hereafter referred to as "the facility"). The facility location is shown on Figure 1 and Figure 2. The narrative also discusses sample results from soil samples collected at these features to determine if there were releases from historical operations. Figure 3 shows the locations of the soil samples collected.

The AST was a dual-compartment, concrete encased tank located on a concrete pad southwest of the former MOC building. The AST consisted of two 6,000-gallon compartments, one for unleaded gasoline and one for diesel. Product flowlines ran from the tanks aboveground to two dispensers just south of the tank. The concrete pad was surrounded by asphalt.

**Soil Sampling**

**Aboveground Storage Tank:** On January 12, 2021, in order to determine if there had been a release from the tanks, ERO had American Demolition, Inc. (ADI), the demolition contractor of the facility, excavate holes about two feet deep at the edges of the concrete pad on either side of each tank compartment and at the north end of the pad for a total of five samples. ERO then collected soil samples of native soils beneath the concrete pad and road base. The soils in each hole were also screened with the photoionization detector (PID). No evidence of a release from the tanks, such as staining, odors, or PID detections, was noted.

**Fuel Dispensers:** On January 27, 2021, ADI removed the two fuel dispensers and the concrete island they were mounted to and ERO collected native soil samples from beneath where the dispensers had been. The soils were also screened with the PID. No evidence of releases from beneath the fuel dispensers, such as staining, odors, or PID detections, was noted.

**Soil Sample Analysis**

The soil samples were placed in iced coolers and delivered under chain-of-custody to SGS Mountain States Laboratory for analysis. The AST samples were analyzed for benzene,

toluene, ethylbenzene, and xylenes (BTEX) and gasoline range organics (GRO) by EPA Method 8260, and diesel-range organics (DRO) and oil-range organics (ORO) by EPA Method 8015. The fuel dispenser samples were analyzed for BTEX, GRO, and methyl tert-butyl ether (MTBE) by Method 8260 and DRO by Method 8015. The laboratory analytical reports are attached (note that the reports include results for soil samples from other features at the facility not related to this AST closure).

### **Soil Sample Results**

Aboveground Storage Tank: No BTEX compounds or GRO were detected in any of the AST samples and low concentrations of DRO and ORO were detected in all five AST samples at combined concentrations of between 60.2 and 110.2 mg/kg, well below the Tier 1 Risk Based Screening Level (RBSL) of 500 milligrams per kilogram (mg/kg).

Fuel Dispensers: No BTEX, GRO, MTBE, and DRO concentrations were detected above the laboratory reporting limit in either dispenser sample.

### **Tank Removal**

The AST was removed from the facility on February 4, 2021 by loading it onto a flatbed truck and transporting it to Gould Construction, Inc. in Glenwood Springs, Colorado to be reused.

### **Conclusions**

Based on the soil sample results and observations, it is ERO's professional opinion that any historical release from the AST has not resulted in soil contamination exceeding the RBSLs. Therefore, on behalf of RFTA, ERO requests No Further Action for the facility.

MDL = Method Detection Limit

J = Indicates an estimated value

RL = Reporting Limit

B = Indicates analyte found in associated method blank

E = Indicates value exceeds calibration range

N = Indicates presumptive evidence of a compound

## Report of Analysis

**Client Sample ID:** NATIVE SOIL IN DRAINAGE  
**Lab Sample ID:** DA31799-8  
**Matrix:** SO - Soil  
**Method:** SW846 8260B  
**Project:** RFTA MOC

**Date Sampled:** 01/13/21  
**Date Received:** 01/13/21  
**Percent Solids:** 91.0

## VOA 8260 List

| CAS No.    | Compound                  | Result | RL  | MDL  | Units | Q |
|------------|---------------------------|--------|-----|------|-------|---|
| 142-28-9   | 1,3-Dichloropropane       | ND     | 2.2 | 0.55 | ug/kg |   |
| 594-20-7   | 2,2-Dichloropropane       | ND     | 2.2 | 0.55 | ug/kg |   |
| 563-58-6   | 1,1-Dichloropropene       | ND     | 2.2 | 0.55 | ug/kg |   |
| 10061-01-5 | cis-1,3-Dichloropropene   | ND     | 2.2 | 0.55 | ug/kg |   |
| 10061-02-6 | trans-1,3-Dichloropropene | ND     | 2.2 | 0.55 | ug/kg |   |
| 100-41-4   | Ethylbenzene              | ND     | 2.2 | 0.55 | ug/kg |   |
| 87-68-3    | Hexachlorobutadiene       | ND     | 2.2 | 0.60 | ug/kg |   |
| 591-78-6   | 2-Hexanone                | ND     | 11  | 5.5  | ug/kg |   |

DA31799: Chain of Custody

Page 1 of 2

# SGS Sample Receipt Summary

Job Number: DA31799

Client: ERO

Project: RFTA MOC

Date / Time Received: 1/13/2021 4:10:00 PM

Delivery Method:

Airbill #'s: HD

Cooler Temps (Initial/Adjusted): #1: (2/2):

## Cooler Security

Y or N

1. Custody Seals Present: ☒ ☐
2. Custody Seals Intact: ☒ ☐

3. COC Present:

Y or N

4. Smpl Dates/Time OK

## Cooler Temperature

Y or N

1. Temp criteria achieved: ☒ ☐
2. Cooler temp verification: IR Gun;
3. Cooler media: Ice (Bag)
4. No. Coolers: 1

## Quality Control Preservation

Y or N

N/A

1. Trip Blank present / cooler: ☐ ☐ ☒
2. Trip Blank listed on COC: ☐ ☐ ☒
3. Samples preserved properly: ☒ ☐
4. VOCs headspace free: ☐ ☐ ☒

Comments

## Sample Integrity - Documentation

Y or N

1. Sample labels present on bottles: ☒ ☐
2. Container labeling complete: ☒ ☐
3. Sample container label / COC agree: ☒ ☐

## Sample Integrity - Condition

Y or N

1. Sample recvd within HT: ☒ ☐
2. All containers accounted for: ☒ ☐
3. Condition of sample: Intact

## Sample Integrity - Instructions

Y or N N/A

1. Analysis requested is clear: ☒ ☐
2. Bottles received for unspecified tests: ☐ ☒
3. Sufficient volume recvd for analysis: ☒ ☐
4. Compositing instructions clear: ☐ ☐ ☒
5. Filtering instructions clear: ☐ ☐ ☒

DA31799: Chain of Custody

## Technical Report for

ERO Resources Corporation

RFTA MOC

20-191

SGS Job Number: DA32064

Sampling Date: 01/27/21

### Report to:

ERO Resources Corporation  
1842 Clarkson Street  
Denver, CO 80218  
csovka@eroreources.com

ATTN: Craig Sovka

Total number of pages in report: **58**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Jason Savoie  
General Manager

Client Service contact: Carissa Cumine 303-425-6021

Certifications: CO (CO00049), NE (NE-OS-06-04), ND (R-027), UT (NELAP CO00049)  
LA (LA150028), TX (T104704511), WY (8TMS-L)

This report shall not be reproduced, except in its entirety, without the written approval of SGS.  
Test results relate only to samples analyzed.

-1-

**Section 1: Sample Summary ..... 3**

**Section 2: Summary of Hits ..... 4**

**Section 3: Sample Results ..... 5**

**3.1: DA32064-1: WEST SEPARATOR ..... 6**

**3.2: DA32064-2: CENTER SEPARATOR ..... 10**

**3.3: DA32064-3: EAST SEPARATOR ..... 14**

**3.4: DA32064-4: NORTH DISPENSER ..... 18**

**3.5: DA32064-5: SOUTH DISPENSER ..... 20**

**Section 4: Misc. Forms ..... 22**

**4.1: Chain of Custody ..... 23**

**Section 5: MS Volatiles - QC Data Summaries ..... 25**

**5.1: Method Blank Summary ..... 26**

**5.2: Blank Spike Summary ..... 28**

**5.3: Matrix Spike/Matrix Spike Duplicate Summary ..... 30**

**Section 6: GC/LC Semi-volatiles - QC Data Summaries ..... 32**

**6.1: Method Blank Summary ..... 33**

**6.2: Blank Spike Summary ..... 35**

**6.3: Matrix Spike/Matrix Spike Duplicate Summary ..... 37**

**Section 7: Metals Analysis - QC Data Summaries ..... 39**

**7.1: Prep QC MP32054: As,Ba,Cd,Cr,Pb,Se,Ag ..... 40**

**7.2: Prep QC MP32056: Hg ..... 50**

**Section 8: General Chemistry - QC Data Summaries ..... 54**

**8.1: Method Blank and Spike Results Summary ..... 55**

**8.2: Duplicate Results Summary ..... 56**

**8.3: Matrix Spike Results Summary ..... 57**

**8.4: Matrix Spike Duplicate Results Summary ..... 58**

Sample Summary

ERO Resources Corporation

Job No: DA32064

RFTA MOC

Project No: 20-191

| Sample Number | Collected Date | Time By | Received | Matrix Code | Type | Client Sample ID |
|---------------|----------------|---------|----------|-------------|------|------------------|
|---------------|----------------|---------|----------|-------------|------|------------------|

This report contains results reported as ND = Not detected. The following applies:  
Organics ND = Not detected above the MDL

|           |          |       |    |          |    |      |                  |
|-----------|----------|-------|----|----------|----|------|------------------|

## Purgeable Aromatics, MTBE and GRO

| CAS No.   | Compound                | Result | RL  | MDL  | Units | Q |
|-----------|-------------------------|--------|-----|------|-------|---|
| 71-43-2   | Benzene                 | ND     | 1.1 | 0.53 | ug/kg |   |
| 108-88-3  | Toluene                 | ND     | 2.1 | 1.1  | ug/kg |   |
| 100-41-4  | Ethylbenzene            | ND     | 2.1 | 0.53 | ug/kg |   |
| 1330-20-7 | Xylene (total)          | ND     | 2.1 | 1.1  | ug/kg |   |
| 1634-04-4 | Methyl Tert Butyl Ether | ND     | 2.1 | 0.53 | ug/kg |   |
|           | TPH-GRO (C6-C10)        | ND     | 210 | 110  | ug/kg |   |

| CAS No.    | Surrogate Recoveries  | Run# 1 | Run# 2 | Limits  |
|------------|-----------------------|--------|--------|---------|
| 1868-53-7  | Dibromofluoromethane  | 116%   |        | 70-131% |
| 2037-26-5  | Toluene-D8            | 103%   |        | 70-130% |
| 460-00-4   | 4-Bromofluorobenzene  | 99%    |        | 70-130% |
| 17060-07-0 | 1,2-Dichloroethane-D4 | 101%   |        | 70-130% |

ND = Not detected MDL = Method Detection Limit

J = Indicates an estimated value

RL = Reporting Limit

B = Indicates analyte found in associated method blank

E = Indicates value exceeds calibration range

N = Indicates presumptive evidence of a compound

(N) Matrix Spike Rec. outside of QC limits  
 (anr) Analyte not requested  
 (a) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.  
 (b) High RPD due to possible sample matrix or nonhomogeneity.

GLENWOOD SPRINGS CO 81601

Re: No Further Action (NFA) Determination for Glenwood Municipal Operations Center, 2301 Wulfsohn Rd., Glenwood Springs, Garfield County, Colorado. (Event ID #13987, Release ID #6194, Facility ID #15748)

Dear Nicholas Senn:

The Division of Oil and Public Safety (OPS) has reviewed the NFA request for the referenced site received on September 16, 2021.

Based solely upon the information submitted, which shows that petroleum contamination concentrations are below state cleanup levels, OPS will require no further investigation or remedial action at this time. If conditions change, OPS reserves the right to determine if any additional actions are necessary. This NFA letter is in reference to the removal of the 12,000 gallon aboveground storage tank on February 4, 2021.

Please submit a Site Decommissioning Report to OPS to document well abandonment and site decommissioning activities within 90 days of receiving this NFA Determination. **OPS cannot release you from any liability that may be associated with any contamination at or from this site.**

Please address correspondence regarding this site to me and if you have any questions, please contact me at 303-318-8507 or via email at [michelle.howard@state.co.us](mailto:michelle.howard@state.co.us).

Sincerely,

Michelle Howard  
Environmental Protection Specialist  
Petroleum Program

**SUBJECT: SITE CHARACTERIZATION REPORT &  
NO FURTHER ACTION REQUEST  
ROARING FORK TRANSPORTATION AUTHORITY (RFTA)  
2307 WULFSOHN ROAD  
GLENWOOD SPRINGS, CO 81601  
FACILITY #15558, EVENT #17254**

Dear Mr. Goodman:

This report documents the soil sampling and analysis performed by Tait Environmental Services, Inc. (TAIT) at the Roaring Fork Transportation Authority (RFTA) Glenwood Springs facility, located at 2307 Wulfsohn Road in Glenwood Springs, CO (site-Figure 1). Site Characterization was required by the Division of Oil and Public Safety – Petroleum Remediation Section. The Facility ID is #15558, and the Event ID is #17254. This Site Characterization Report (SCR) is being submitted in combination with a No Further Action Request (NFAR).

On November 2, 2022, the Colorado Division of Oil and Public Safety (OPS) received notification of a confirmed release at the site due to a piping sump testing failure. The OPS issued an Event Letter on November 7, 2022, requiring that a Site Characterization be performed at the site. A copy of the Event Letter is contained in Attachment A.

The Site Characterization activities were undertaken to determine if soil and/or groundwater contamination was present in the strata adjacent to the 1,000-gallon old oil underground storage tank (UST), designated as Tank #4. On April 11, 2023, a geophysical survey was completed at the site to determine the footprint of the tank, tank excavation, and adjacent underground fuel and vent lines. On April 12, 2023, a site assessment was completed to sample the soils adjacent to the base of the UST. All samples were submitted to an environmental laboratory for analysis.

## **SITE GEOLOGY AND HYDROGEOLOGY**

The geology of the site and surrounding area was obtained from the following reference:

Kirkham, Robert M., Streufert, Randall K., and Cappa, James A., 1995, Geologic Map of the Glenwood Springs Quadrangle, Garfield County, Colorado, Description of Map Units, Colorado Geological Survey, Division of Minerals and Geology, Department of Natural Resources, Open file 95-3.

According to the above reference, the site is directly underlain by Younger Debris Flows of Holocene age. These sediments consist of poorly sorted, clast-and matrix-supported, pebble and cobble gravel in a sandy silt or silty sand matrix. Fragments consist of sedimentary rock and basalt. In the area of the site, the Younger Debris flows are located directly downhill from the Eagle Valley Formation of Pennsylvania age and the Maroon Formation and Weber Sandstone of Pennsylvania and Permian age. These formations consist of red sandstone, conglomerate, mudstone, siltstone and shale which form the cliffs outcropping above and south of the site.

There was no readily available information concerning the groundwater conditions in the vicinity of the site.

During the soil sampling event at the site, the geology of the natural sediments beneath the site was determined as follows. Pea gravel was noted in borings B1 and B4 to depths ranging from eight (8) feet below ground surface (bgs) in boring B1 to about 13 feet bgs in boring B4. Both of these borings were located within the UST basin. Below these depths, sediments consisted of clayey and silty sands as described below.

Borings B2 and B3 were located outside of the UST basin and consisted primarily of red clayey and silty sands with variable gravel layers from depths of two (2) to 25 feet bgs. These sediments corresponded to the Younger Debris Flows; however, it was not possible to determine whether these sediments were partly foundation backfill that was placed in the area prior to development of the buildings. The provenance for these sediments appears to be from the Pennsylvanian and Permian aged sedimentary rocks in the cliffs above the facility to the south.

Groundwater was not encountered in the sediments; however, the finer grained layers in some of the borings were moist and appeared to be soaking up downward percolating surface water. The coarser grained layers in the borings were dry, indicating that no viable groundwater zone was present within the upper 25 feet of the geologic section in this area of the site.

Soil boring logs are contained in Attachment B.

## **GEOPHYSICAL INVESTIGATION**

On April 11, 2023, TAIT contracted GPRS in Highlands Ranch, CO to perform a geophysical investigation of the UST area. The purpose of the survey was to locate utilities near the current UST system, outline the area of UST excavation, the USTs, and any underground piping lines as much as possible to allow for location of four (4) soil borings adjacent to the UST. A copy of the GPRS report is contained in Attachment C.

## **SOIL SAMPLING**

On April 12, 2023, TAIT advanced 4 direct-push soil borings (B1, B2, B3, and B4) using a track-mounted Geoprobe 7822DT operated by Vista Geoscience of Golden, Colorado. Vista submitted a locates request to Colorado 811 (Ticket #A309302509-00A) in advance of drilling activities. To ensure that no lines were located adjacent to the UST, Vista potholed each boring to a depth of five (5) feet bgs.

Soil borings B1, B2, and B4 were each completed to a total depth of 25 feet bgs. Boring B3 met refusal at a depth of 22 feet bgs. Based on tank measurements and the geophysical results, it was determined that Tank #4 was within 18 inches of Tank #3 (2,000-gallon new oil tank), and it was determined that a soil boring could not be safely completed between the two USTs. As a result, the soil borings were located on the northern, western, and southern sides of Tank #4 in the locations shown on the Soil Boring Location Map (Figure 2).

Soil samples were collected at depths of 15 and 25 feet bgs (22 feet bgs in boring B3) in each boring. The 15-foot depth was representative of the soils beneath the tank basin, and consisted of the following samples:

B1-15  
B2-15  
B3-15  
B4-15

Soil samples were collected from the 25-foot depth in accordance with the OPS "Guidance for Spill Bucket Assessment", which was dated March 3, 2021, and consisted to the following samples:

B1-25  
B2-25  
B3-22  
B4-25

All soil samples were transferred from the acetate tubes directly into pre-cleaned, laboratory-supplied, Teflon-lined, 4-ounce glass jars. The glass jars were labeled and placed immediately into an iced cooler prior to transport to the analytical laboratory.

During the completion of the soil borings, volatile organic compound (VOC) readings in parts per million (ppm) were taken with a Mini-Rae 2000 photoionization detector (PID) at various depth intervals in each of the soil borings. None of the readings detected VOCs above 0.0 ppm. The PID readings are shown on the boring logs in Attachment B. Visual and olfactory observations of the soils did not indicate the presence of petroleum hydrocarbons in any of the samples.

## **LABORATORY ANALYSIS**

All soil samples collected at the site were transported under standard chain-of-custody protocols to Origins Laboratory, Inc. in Denver, CO within 24 hours of sample collection. All samples were submitted for analysis for Total Petroleum Hydrocarbons (TPH) as Gasoline (C6-C10), Diesel (C10-C28) and Residual Range Organics (C28-C40) using EPA Method 8015D. All soil samples were also analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl tert-butyl ether MTBE using EPA Method 8260D. Origins is a NELAP certified laboratory.

Gasoline, Diesel, Residual Range Organics, BTEX, and MTBE were not detected in any of the soil samples above their respective Laboratory Reporting Limits. As there were no TPH detections, analysis for Polycyclic Aromatic Hydrocarbons (PHHs) was not performed on any of the samples. The laboratory report and chain-of-custody documentation for the soil samples are included in Attachment D.

## **CONCLUSION**

Based on the analytical results, no further work is recommended with respect to the UST at the site, and no further action is requested.

## **WASTE HANDLING**

Potholed soil and borehole soil cuttings were generated during the drilling event. Based on the analytical results of the soil sampling, the waste soils obtained during the drilling event did not contain detectable concentrations of DRO, MORO, GRO, BTEX, and MTBE. These soils were transported off site to Raritan CWT of Englewood, CO under a non-hazardous waste manifest provided by Vista Geoscience. A copy of the manifest is contained in Attachment E.

## LIMITATIONS

A soil sampling report contains professional opinions with respect to environmental issues of concern and/or additional actions that may be addressed at the site. In rendering a professional opinion, TAIT warrants that the services provided hereunder were performed within the limits described and in accordance with current generally accepted environmental consulting principles and practices.

TAIT represents that the services were performed in a manner consistent with industry standards. No other warranty, either expressed or implied, is intended by TAIT.

TAIT is not responsible for any potential impact of the property attributable to this document due to changes in applicable environmental standards, practices or regulations following performance of services. Services hereunder were performed in accordance with TAIT's agreement and understanding with, and solely for the use of the responsible party.

Opinions and/or recommendations are intended for the client, purpose, site, location, time frame and project parameters indicated. TAIT is not responsible for subsequent separation, detachment, or partial use of this document. Any reliance on this report by a third party shall be at such party's sole risk.

Should you have any questions concerning this report, please do not hesitate to contact the undersigned at (714) 719-6869 or via e-mail at [pmccarter@tait.com](mailto:pmccarter@tait.com).

TAIT ENVIRONMENTAL SERVICES, INC.

Sincerely,

Paul N. McCarter  
Senior Geologist  
Recognized Environmental Professional #9

Re: Request for a Site Characterization Report (SCR) for Roaring Fork Transit Agency, 2307 Wulfsohn Rd., Glenwood Springs, Garfield County, Colorado (Event ID #17254, Release #16242, Facility ID #15558)

Dear Mike Hermes:

The Division of Oil and Public Safety (OPS) has received notification of a confirmed release on November 2, 2022, at the above-referenced address. As the owner/operator responsible for the release, OPS requests that you perform a Site Characterization according to the Petroleum Storage Tank Regulations and the Petroleum Program Guidance.

The purpose of Site Characterization is to define the extent of release source area(s), determine the distribution of contamination in the subsurface, determine if points of exposure are impacted or potentially impacted, evaluate all exposure pathways, and determine whether active remediation is needed. Appropriate pilot testing should be completed and reported in the SCR if active remediation is needed. You should obtain access to off-site properties, including rights-of-way, if the extent of contamination is beyond the release property boundary.

Site characterization results should be submitted to OPS within 180 days of the release discovery (by **May 1, 2023**) using the combined format provided on the OPS website. Failure to submit a complete SCR within 180 days will result in violation of the regulations and will subject you to penalties and enforcement as described in the Petroleum Storage Tank Statutes.

OPS encourages you to retain a Recognized Environmental Professional (REP) to complete the Site Characterization activities described. Responsible parties must identify a REP in order to seek reimbursement from the Petroleum Storage Tank Fund within the Reasonable Cost Guidelines.

In addition to the Site Characterization, appropriate repairs and/or replacements are required within 30 days of discovering the failure. Submit the minor equipment form to [cdle\\_oil\\_inspection@state.co.us](mailto:cdle_oil_inspection@state.co.us) by (December 2, 2022). If the release is from an underground storage tank system, a Qualified Service Technician must complete the repairs or replacement of the equipment

Your cooperation in addressing this release event is appreciated and communication with OPS during characterization is recommended. You may contact the technical reviewer, Murray Brown at (303) 728-4849 or [murray.brown@state.co.us](mailto:murray.brown@state.co.us), if you have any questions.

Sincerely,

Michelle Howard  
Release Coordinator  
Petroleum Program

April 12, 2023

April 12, 2023

TAIT & Associates

**Attn:** Paul McCarter

**Site:** 2307 Wulfsohn Rd, Glenwood Springs, CO 81601

We appreciate the opportunity to provide this report for our work completed on April 11, 2023.

## **PURPOSE**

The purpose of this project was to determine the dimensions of underground storage tanks (USTs), suspected UST-related piping/anomalies remaining on the property and to determine the extents of the backfilled area containing USTs. The scope of work consisted of one location containing two tanks measuring approximately 40'x40'. The interiors of buildings were excluded from the scope of this project. The client marked the desired locations prior to our scanning and our markings were then placed onto the surface using paint.

## **EQUIPMENT**

- **Underground Scanning GPR Antenna.** The antenna with frequencies ranging from 250 MHz-450 MHz is mounted in a stroller frame which rolls over the surface. The surface needs to be reasonably smooth and unobstructed in order to obtain readable scans. Obstructions such as curbs, landscaping, and vegetation will limit the feasibility of GPR. The data is displayed on a screen and marked in the field in real time. The total depth achieved can be as much as 8' or more with this antenna but can vary widely depending on the types of materials being scanned through. Some soil types such as clay may limit maximum depths to 3' or less. As depth increases, targets must be larger in order to be detected and non-metallic targets can be especially difficult to locate. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: [Link](#)
- **Electromagnetic Pipe Locator.** The EM locator can passively detect the electromagnetic fields from live AC power or from radio signals travelling along some conductive utilities. It can also be used in conjunction with a transmitter to connect directly to accessible, metallic pipes or tracer wires. A current is sent through the pipe or tracer wire at a specific frequency and the resulting EM field can then be detected by the receiver. A utility's ability to be located depends on a variety of factors including access to the utility, conductivity, grounding, interference from other fields, and many others. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: [Link](#)
- **GPS.** This handheld GPS unit offers accuracy down to 4 inches; however, the accuracy will depend on the satellite environment and obstructions and should not be considered to be survey-grade. Features can be collected as points, lines, or areas and then exported into Google Earth or overlaid on a CAD drawing. For more information, please visit: [Link](#)
- **Magnetometer.** The magnetometer detects the magnetic field of a ferromagnetic object. It responds to the difference in the magnetic field between two sensors. It is interpreted in the field by listening to changes in frequency as emitted by a speaker on the device. Larger metallic objects can be located at depths of up to 10' or more but total depths will depend on the size, type, shape, and orientation of objects along with the amount of interference from other objects. For more information, please visit: [Link](#)

## **PROCESS**

The EM pipe locator was used to connect to accessible, traceable pipes that may be tank-related such as vent pipes or product lines. A current is induced onto the pipe which creates an electromagnetic field that can be traced using the receiver. We can then attempt to trace these pipes to their origin or end point and paint or flag their locations.

Initial GPR scans were collected in order to evaluate the data and calibrate the equipment. Based on these findings, a scanning strategy is formed, consisting of scanning the entire area in a grid with 2' scan spacing in order to locate any potential UST's that may remain at the site. The GPR data is viewed in real time and anomalies in the data were located and marked on the surface along with their depths using paint. Relevant scan examples were saved and will be provided in this report.

The magnetometer was used to sweep the site every 3'-5' to search for readings that may represent buried, ferrous objects. Upon detection, the readings will be marked on the surface and then investigated from multiple directions and with other methods such as GPR.

## **LIMITATIONS**

Please keep in mind that there are limitations to any subsurface investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No subsurface investigation or equipment can provide a complete image of what lies below. Our results should always be used in conjunction with as many methods as possible including consulting existing plans and drawings, exploratory excavation or potholing, visual inspection of above-ground features, and utilization of services such as One Call/811. Depths are dependent on many factors so depth accuracy can vary throughout a site and should be treated as estimates only. Relevant scan examples were saved and will be provided in this report.

## **FINDINGS**

The subsurface conditions at the time of the scanning allowed for maximum GPR depth penetration of 3-5' in most areas. Multiple utilities were observed during the scanning; however, utility locating was not part of the scope of this project. The equipment and methods used did detect reactions from potential UST's. Reactions from UST's were only visible in select areas. As a result, approximate boundaries of tanks were unable to be determined. Approximate extents of tank basin backfill were able to be determined and were marked on the surface. Tank associated lines were found and marked on the surface. The following pages will provide further explanation of the findings.

 Date of Scanning: 4/11/23

**Terms and Conditions**

GPRS does not provide land survey or civil engineering data collection or documentation. This is provided as a reference map of the field markings and is not survey-grade.

Prepared by:

Sample GPR data screenshot showing a possible former tank pit or excavation. The change in the data from the excavation is apparent but GPR cannot determine whether this is due to a tank removal or whether tanks may still exist beyond the maximum depth penetration of the GPR signal.

Sample GPR data screenshot showing three reactions from probable USTs. The diameters cannot be determined from these hyperbolas but they can be seen to be larger than a reaction from a typical utility.

Sample GPR data screenshot showing three reactions from known USTs at an active fueling station. The concrete above the USTs is reinforced with wire mesh.

Sample GPR data screenshot showing three reactions from known USTs at an active fueling station. These USTs are non-metallic and therefore have a weaker reflection that is more difficult and sometimes impossible to identify in the GPR data.

Sample GPR data screenshot showing two potential USTs. These reactions are larger than a typical utility but large utilities can look identical to a UST.

Sample GPR data screenshot showing a scan collected parallel along the top one of the suspected USTs shown in the data to the left. A parallel scan is used to determine a clear beginning and end to the reaction to the reaction which is an indicator of a UST and to determine an approximate length.

Sample Data Screenshots.  
(Not taken from this project)

Location:  
previously collected from various sites

GPR data screenshot showing data typical for the area near the tanks. This scan was not taken over tank basin and no subsurface structures are pictured.

GPR data screenshot showing data consistent with USTs. Left scan taken E-W on south side of tank lids, right scan taken running W-E on north side of tank lids. Blue arrows are pointing to reactions of tanks. Orange lines showing approximate extents of possible tank basin backfill. Tanks only visible with GPR near central tank lids.

GPR screenshot showing scan taken running N-S over westernmost tank. Orange lines showing approximate extents of possible tank basin backfill. Large reaction in center due to tank lid. Length of tank was unable to be determined.

GPR screenshot showing scan taken N-S over easternmost tank. Orange lines show approximate extents of possible tank basin backfill. Three large reactions are caused by tank lids. Tank length was unable to be determined.

GPR Data Screenshots

Location:  
2307 Wulfsohn Rd, Glenwood Springs, CO  
81601

Site photo showing approximate extents of tank basin in pink brackets. Centers of tanks were marked where seen.

Site photo showing vent lines traced from nearby above ground vent. Lines were unable to be traced all the way to tanks and could not be seen using GPR.

Site photo showing two unknown lines at north ends of tanks. Lines were found using passive sweeps and depths were unable to be verified. Lines did not extend past approximate centers of tanks and are believed to be associated with tanks.

GPR Data Screenshots and Photos

2307 Wulfsohn Rd, Glenwood Springs, CO 81601

## **CLOSING**

GPRS, Inc. has been in business since 2001, specializing in underground storage tank location, concrete scanning, utility locating, and shallow void detection for projects throughout the United States. I encourage you to visit our website ([www.gprsinc.com](http://www.gprsinc.com)) and contact any of the numerous references listed.

USTs were able to be seen in a small radius around tank lids of both tanks. Extents of tanks were unable to be determined using GPR. Centers of tanks were marked where they were able to be seen.

Approximate backfill extents of tank basin were able to be determined and were marked on the surface.

Tank associated lines were found and marked. Vent lines at the south end were unable to be traced all the way to either tank from the above ground vents and their depths were unable to be determined. Two unknown lines were found and marked at the north end of each tank and traced running into the nearby garage. Depths of these lines were unable to be determined.

GPRS appreciates the opportunity to offer our services, and we look forward to continuing to work with you on future projects. Please feel free to contact us for additional information or with any questions you may have regarding this report.

Signed,

Project Name - RFTA Glenwood Springs

Project Number - RFTA2022 PO#AS813

Attached are your analytical results for RFTA Glenwood Springs received by Origins Laboratory, Inc. April 13, 2023. This project is associated with Origins project number Y304288-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

| Requirement Description                                                                                                                                                                                                                                                                                                                                                                                             | Yes                                 | No                                  | N/A                      | Comments (if any) |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|-------------------|
| If samples require cooling, was the temperature between 0°C to ≤ 6°C <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Is there ice present (document if blue ice is used)                                                                                                                                                                                                                                                                                                                                                                 | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Are custody seals present on cooler? (if so, document in comments if they are signed and dated, broken or intact)                                                                                                                                                                                                                                                                                                   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                   |
| Are custody seals present on each sample container? (if so, document in comments if they are signed and dated, broken or intact)                                                                                                                                                                                                                                                                                    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                   |
| Were all samples received intact <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Was adequate sample volume provided <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                                                                | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Are short holding time analytes or samples with HTs due within 48 hours present <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                   |
| Is a chain-of-custody (COC) present and filled out completely <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                                      | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Does the COC agree with the number and type of sample bottles received <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                             | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Do the sample IDs on the bottle labels match the COC <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                                               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| Is the COC properly relinquished by the client with date and time recorded <sup>(1)</sup> ?                                                                                                                                                                                                                                                                                                                         | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |                   |
| For volatiles in water — is there headspace (> ¼ inch bubble) present? If yes, contact client and note in narrative.                                                                                                                                                                                                                                                                                                | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                   |
| Are samples preserved that require preservation and was it checked <sup>(1)</sup> ? (note ID of confirmation instrument used in comments) / (preservation is not confirmed for subcontracted analyses in order to insure sample integrity) / (pH < 2 for samples preserved with HNO <sub>3</sub> , HCL, H <sub>2</sub> SO <sub>4</sub> ) / (pH > 10 for samples preserved with NaAsO <sub>2</sub> +NaOH, ZnAc+NaOH) | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                   |
| Additional Comments (if any):                                                                                                                                                                                                                                                                                                                                                                                       |                                     |                                     |                          |                   |

<sup>(1)</sup>If NO, then contact the client before proceeding with analysis and note date, time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.

Re: No Further Action (NFA) Determination for Roaring Fork Transit Agency, 2307 Wulfsohn Road, Glenwood Springs, Garfield County, Colorado. (Event ID 17254, Release ID 16242, Facility ID 15558)

Dear Mike Hermes:

The Division of Oil and Public Safety (OPS) has reviewed the Site Characterization Report (SCR) NFA request (RR-088835) for the referenced site received on April 26, 2023.

Based solely upon the information submitted, OPS will require no further action at this time. If conditions change, OPS reserves the right to determine if any additional actions are necessary. This NFA letter is in reference to a confirmed release reported on November 2, 2022.

Please submit a [Site Decommissioning Report](#) to OPS to document well abandonment and site decommissioning activities within 90 days of receiving this NFA Determination. **OPS cannot release you from any liability that may be associated with any contamination at or from this site.**

Please address correspondence regarding this site to me and if you have any questions, please contact me at 720-376-0239 or via email at [Hannah.williams@state.co.us](mailto:Hannah.williams@state.co.us).

Sincerely,

*K. Hannah Williams*

Mr. King,

I am in receipt of your request set forth below. Garfield County does not have any responsive records on the properties. You may want to contact the City of Glenwood Springs to see if they have any records on the properties.

This request is closed.

Mary Lynn Stevens  
Paralegal/Off. Mgr

Date: 6/11/2024

Requestor's name: Jacob King

Organization represented (if any): ERO Resources Corporation

Address: 1626 Cole Blvd  
Suite 100  
Lakewood, CO 80401

Email: [jking@eroresources.com](mailto:jking@eroresources.com)

Phone number: (970) 818-1181

Fax:

Name of document(s) requested, including the department where the document(s) originated: ERO Resources Corporation is conducting an Initial Site Assessment (ISA) for the Roaring Fork Transportation Authority Glenwood Maintenance Facility project, located at 2307 Wulfsohn Road, Glenwood Springs, CO. ERO is requesting records for the following Garfield County parcels: 218505336002, 218505337001, and 218505337003.

A georectified PDF map of the project area or a KMZ will be provided upon request.

As part of this ISA, ERO is requesting a search of department records for the project area that may indicate a release or disposal of petroleum products or hazardous materials. Examples of such sites include underground and/or aboveground storage tanks, incidents involving hazardous substances or petroleum products spills, use or storage, landfills, or reports of illegal solid waste disposal, enforcement actions, complaints or inspection notices.

If you have any questions, please feel free to reach out via my email or cell phone at any time.

Thank you,  
Jacob King

# Introduction

The Roaring Fork Transportation Authority (RFTA) is proposing to develop a West Glenwood Transit Center (Phase 6A), Administration Building (Phase 6B) and a maintenance building (Phase 8). The proposed projects are designated for three distinct parcels as shown on the project context map on page 2. RFTA currently owns all three parcels. Phase 6A is a proposal to upgrade the existing West Glenwood park-and-ride into a regional transit center. Phase 6B is a proposal to construct an administration building for RFTA professional staff. Phase 8 is a proposal to construct an additional maintenance building at the existing RFTA General Maintenance Facility. A complete description of each Phase is provided in this document.

Per the City of Glenwood Springs Municipal Code, the Phase 6A Transit Center is subject to review under Article 070.080 Matters of State Interest. All Phases are subject to review under Article 070.60.050(d) Location and Extent Review. This document, along with the design plans and appendices, encompasses the application for a Matters of State Interest permit.

## **Matters of State Interest - Development Code Article 070.080**

The purpose of the Matters of State Interest process is, in part, to regulate site selection of mass transit stations to ensure that they avoid conflicts with the City's land use plans. The following materials submitted under this category demonstrate the proposed development is consistent with the guidelines established in the City's Comprehensive Plan and the statutory requirements and criteria set forth in C.R.S. § 24-65.1-101 et seq.

This document encompasses the Matters of State Interest permit application for Phase 6A, the proposed Transit Center. As noted above, the Phase 6B Administration Building and Phase 8 Maintenance Building are not subject to the State Interest review and are therefore omitted from this section.

# Project Site Context Map

**Note:** Parcel acreage and information listed here is per Garfield County Assessor database and may vary from surveyed conditions.

# Project Narrative

## Background

The Roaring Fork Transportation Authority (RFTA) has been operating in the Roaring Fork Valley since 1983. RFTA provides a variety of public transportation services along the State Highway 82 corridor (Glenwood Springs to Aspen) and along a segment of I-70 (Glenwood Springs to Rifle). Formerly, RFTA was exclusively dedicated to regional transit. Today, RFTA has a role in express and local regional transit, senior/para-transit, bus rapid transit, multi-modal infrastructure, first-and-last mile mobility, and public skier shuttle services. It is the second largest transit system in Colorado and the largest rural transit system in the United States, providing nearly 5 million trips annually with a fleet of over 100 buses.

Currently, RFTA provides transit services spanning 3 counties and 70 linear miles, from Aspen to Rifle. Since 2004, RFTA ridership has grown by 60% and is estimated to increase by at least 25% over the next 20 years, under the most conservative scenarios. To meet the emerging transportation needs, RFTA is expanding services along the I-70 corridor between Glenwood Springs and Parachute.

## The Need

Transportation is a component of the built environment and the term “public transportation” includes a wide variety of services that provide regimented and continuous transportation means to the public. Historically, transportation policies and infrastructure investments have emphasized and prioritized road improvements over supporting public transportation systems and facilities. Shifting the focus onto expanding public transportation facilities can increase the use of public transit and simultaneously reduce traffic congestion and air pollution. Additionally, increased access to public transportation can also improve health equity by providing the opportunity to access vital services, employment, and providing a foundation for social connection.<sup>1</sup>

The Roaring Fork Valley is a rapidly growing region with RFTA as a vital connector for the growing workforce and residential communities. In fact, Garfield County demographics data shows that the County will experience continuous growth over the next 25 years with the population expected to grow by more than 50% in the next 30 years.<sup>2</sup> To accommodate this continuous population growth and the changing environmental climate, RFTA developed a plan for the future of public transportation operations throughout the region.

In 2016, RFTA began to take a closer look at regional transit needs referencing the Integrated Transportation System Plan (ITSP) and the Upper Valley Mobility Study (UVMS). In 2018, RFTA developed a strategic improvement plan for the region’s transportation system titled Destination 2040.

Destination 2040 includes project goals and measurable milestones focusing on improvements for the environment, solutions for reducing traffic congestion and improving mobility, and improvements in sustainability and safety. These identified deliverables are specific to the Roaring Fork Valley. The Destination 2040 project will ultimately help RFTA maintain and improve its services, infrastructure and equipment.<sup>3</sup>

As part of these efforts and in response to regional population growth and increasing transit demand, RFTA has identified the need to develop a Regional Transit Center in West Glenwood Springs. The Regional Transit Center (RTC) project includes three phases: Phase 6A Transit Center, Phase 6B Administration Building, and Phase 8, Maintenance Building.

Phase 6A entails upgrading the existing West Glenwood Park & Ride to make it a true transit center with an expanded bus platform, transit building, bathrooms, and various user amenities.

# Project Overview

## Context

The RFTA Phase 6A transit center is proposed for a site on Wulfsohn road in west Glenwood Springs where there is currently a park and ride bus station, see context map on page 2.

The transit center will be a main node for the RFTA system in the Roaring Fork Valley, cultivating connections between neighboring towns. The transit center will be the link between the Highway 82 corridor and the I-70 corridor “Hogback” routes. The center will provide amenities such as indoor waiting areas to foster comfortable and seamless connections between these two major transportation corridors as well as first-and-last mile connections to nearby multi-family residential and commercial areas. The site design emphasizes and respects the existing views and is thoughtfully designed to be a bright and welcoming public space.

The administration building is expected to be the face of RFTA and is therefore a critical component of RFTA's vision for the next 20 years and beyond.

## Architectural and Site Design

The style of architecture reflects other RFTA projects in the valley. At the transit center, the roof forms echo those used at the existing BRT stations at 27th Street and up valley. The materials are reflective of the mountain environment and history, with stone, wood and metal elements. The administration building materially connects with the transit center by using similar materials and tones. The Phase 8 maintenance building is intended to be aesthetically similar to the existing GMF building. There will be no public access to this building.

The program for the transit center building includes a portion that is limited for RFTA employees and operations programming on the west side with separate commuter-friendly programming on the east side of the building. The transit center includes programming including but not limited to a driver lounge, ticketing station, public restrooms, lost & found, and mechanical and maintenance storage areas. The proposed project includes an improved ADA parking area and additional parking downslope.

## Infrastructure (Roads, Trails, and Utilities)

The park & ride expansion has been designed to prioritize safety and accessibility. The bus platform maximizes space for bus bays while also activating points of access and que areas with raised planting areas. Pedestrian safety signage and a crosswalk is proposed to connect sidewalks along south Wulfsohn with the transit center. The paved path on the north side of Wulfsohn connects directly to the platform. The transit platform has been designed in a way that trail users will be able to safely connect between the north and south segments of the trail using the proposed crosswalk. Reference the Traffic Study summary included on page for more information regarding the proposed crosswalk and pedestrian signage.

All needed utilities are in place, no major extensions are anticipated beyond what would typically be needed for any construction project. Electrical, water, sewer, gas, telephone, and cable, already exist within the project area; these utilities will be adapted and re-aligned as necessary to meet project needs.

## Landscape & Green Space

The transit center is designed with raised planters throughout the platform to shape and guide a thoughtful circulation experience around the space. Waiting riders are provided various covered and uncovered seating areas with opportunities for social interaction or quiet space. The plant palette emphasizes native and drought tolerant species to be used throughout the project. The landscaping reflects the character and context of the surrounding landscape found along the edges and surrounding the development.

The landscape at the administration building echoes that found at the transit center by using similar elements, such as raised planters at the building entry, covered outside seating, and a similar native and drought tolerant plant pallet. Also included is outdoor gathering and meeting room spill over space, amphitheater seating, and an informal walking path with bench seating.

### **Plan Set**

The Phase 6A Transit Center architectural and engineering plan set submitted separately is intended to be reviewed alongside this document and the appendices. The plan set includes architectural, civil engineering, lighting, and landscape drawings.

## Ownership

# Matters of State Interest Permit

## Article 070.80 Guidelines and Regulations for Matters of State Interest

*The purpose and intent of the regulations set forth in Article 070.80 is to facilitate the identification, designation, and administration of matters of state interest consistent with the statutory requirements and criteria set forth in Section 24-65.1-101, et seq., C.R.S., and the guidelines established in the Comprehensive Plan, as well as the following [partial]:*

*(3) To regulate the site selection of rapid or mass transit terminals, stations, and fixed guideways to ensure that the same are located in a manner that will avoid conflicts with the City’s land use plans; minimize congestion in the streets; secure safety from fire, floodwaters, and other dangers; promote health and general welfare; provide adequate light and air; prevent the overcrowding of land; avoid undue concentration of population; and facilitate the adequate provision of transportation, water, sewerage, schools, parks, and other public requirements;*

### Conformance with the Comprehensive Plan

In the following section, pertinent language from the Comprehensive Plan is provided, with an Applicant response at the end.

Goals [partial]:

Address transportation needs and provide multiple convenient travel choices

Action Plan [partial]:

| Land Use & Future Growth |                                                                                                                                                |                                       |           |               |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-----------|---------------|
| #                        | Policy/Action                                                                                                                                  | Champion                              | Timeline  | High Priority |
| 1.1                      | Promote Transit Oriented Development (TOD).                                                                                                    |                                       |           |               |
| 1.1.A                    | Plan for transit stations located in all mixed-use neighborhoods by incorporating principles of smart growth, new urbanism and green building. | Engineering/RFTA                      | Near Term |               |
| 1.1.B                    | Concentrate growth in Glenwood Springs in locations that can be served by high-frequency transit.                                              | Engineering and Community Development | Near Term |               |

### Land Use and Growth Management Strategies:

*“The City and the Roaring Fork Transportation Authority (RFTA) should continue to promote redevelopment and the expansion of transit infrastructure to enhance the regional bus service...” pg. 44*

*Community Character & Vitality:*

*“Glenwood Meadows has seen recent residential and commercial development, with multi-family housing and both small and large-scale retail and restaurants. Glenwood Meadows is also anchored by the Glenwood Springs Community Center. With easy access to*

*Downtown and commercial uses, the vision for the remainder of buildable land in Glenwood Meadows is mixed-use development to increase housing options in this transit-served area.” pg. 53*

*Transportation and Mobility:*

*“Investment in transit to improve options to travel within, to and through Glenwood Springs is also a priority.” pg. 66*

*“A major barrier that has been identified by RFTA and the City is that the BRT does not regularly serve downtown or West Glenwood... This has restricted the ability of transit to effectively serve commuters traveling through Glenwood, residents from most of the neighborhoods in Glenwood who commute up-valley, or relieve traffic congestion on CO 82 through town.” pg. 68*

*“A core strategy to mitigate future traffic growth on CO 82 in Glenwood Springs will be to improve regional transit to and through Glenwood Springs.” pg. 71*

*“It is recommended to work with RFTA to improve the VelociRFTA bus rapid transit (BRT) through Glenwood Springs, including prioritizing bus movement, and increasing frequency to Downtown and West Glenwood... This would improve options for two of the three dominant regional travel markets during peak times on CO 82, including commuters from Western Garfield County traveling through Glenwood Springs to the Roaring Fork Valley, and commuters from Glenwood Springs commuting up-valley. Eventually extending the BRT west of Glenwood Springs could further meet demand for the inbound and pass-through travel market originating in Western Garfield County.” pg. 71*

*“Additionally, improving the frequency, reliability and speed of transit service along the Hogback route west of Glenwood Springs both to and within Glenwood Springs would also improve options for the inbound commuter travel market from western Garfield County.” pg. 71*

**RESPONSE:**

The Comprehensive Plan identifies several deficiencies in the existing public transportation system which the proposed transit center is designed to address.

One of the identified deficiencies is the absence of BRT connectivity to West Glenwood and the convenience of bus services along the Hogback route west of Glenwood Springs. Both of these issues are directly addressed by the proposed improvements to the existing West Glenwood Park & Ride. The new transit center will allow expansion of BRT to West Glenwood and also provide convenient connectivity to bus services to New Castle and Rifle. The Comp Plan states that in order to reduce traffic on Highway 82 through Glenwood Springs, convenient public transit needs to be available to pass-through commuters coming from western Garfield County. The West Glenwood Springs transit center will enable RFTA to provide these services.

The Comprehensive plan identifies the Glenwood Meadows area as a location for future mixed-use development along an existing transit corridor. There are currently several mixed-use apartment buildings in Glenwood Meadows and additional apartments are under construction. As shown on the Zone District Map on page 31, the property immediately east of the proposed station is zoned for mixed use development and the property directly across Wulfsohn Road is zoned for high density residential development. Locating a transit station near this existing and future development furthers the transit and land-use goals of the Comprehensive Plan.

The proposed improvements to the existing West Glenwood Park & Ride will provide a more comfortable station with expanded service area, which will make public transit a more attractive option to both local and regional residents.

The Comprehensive Plan generally supports expansion of public transportation services and specifically encourages improvements to services in West Glenwood and beyond. The transit center project is in keeping with and furthers these goals.

## **070.80.250 Submission Requirements for all Permit Applications; Waivers**

*The Applicant is providing the following responses to specific Sections of the Code as requested by the City of Glenwood Springs Planning Department. The Planning Department did not request responses to certain Sections of the Code and these Sections have been omitted as noted.*

### **(a) Cover Page**

*Completed application cover page in the format approved and maintained by the Community Development Department.*

Please see the completed cover page form on page 8, at the beginning of this document.

### **(b) Information Describing the Applicant.**

#### **1. The names, addresses, including email address and fax number, organizational form, and business of the applicant and, if different, the owner of the project.**

Ben Ludlow, Capital Projects Program Manager, bludlow@rfta.com, 970.384.4858

The Roaring Fork Transportation Authority has been in operation since 1983, and functions as a Regional Transportation Authority (RTA). The RTA includes the communities of Aspen, Snowmass Village, Pitkin County, Basalt, and a portion of Eagle County, Carbondale, Glenwood Springs and the newest member New Castle. RFTA provides commuter bus service from Aspen to Glenwood Springs (Roaring Fork Valley), Glenwood to Rifle (Hogback), intra city service in Aspen and Glenwood Springs, ski shuttle service to the four Aspen Skiing Company ski areas, the Maroon Bells Shuttles, and a variety of other seasonal services.

#### **2. The names, addresses and qualifications, including those areas of expertise and experience with projects directly related or similar to that proposed in the application package, of individuals who are or will be responsible for constructing and operating the project.**

See table on page 12 for a list of those who are responsible for the constructing and operation of the project and their previous experience with similar project types or expertise.

#### **3. Written authorization of the application package by the project owner, if different than the applicant.**

See written authorization in Appendix F provided by the project owner.

**4. Documentation of the applicant's financial and technical capability to develop and operate the project, including a description of the applicant's experience developing and operating similar projects.**

Not requested, not provided.

**5. Written qualifications of report preparers.**

Not requested, not provided.

The qualifications of those responsible for the construction and operation of this facility are provided in the table below.

| NAME            | ADDRESS                                                                         | QUALIFICATIONS                        |
|-----------------|---------------------------------------------------------------------------------|---------------------------------------|
| Ben Ludlow      | <a href="mailto:bludlow@rfta.com">bludlow@rfta.com</a> , 970.384.4858           | RFTA Capital Projects Program Manager |

| Chuck Gustafson | <a href="mailto:cgustafson@sehinc.com">cgustafson@sehinc.com</a> , 719.248.3249 | SHE Construction Manager              |

**(c) Information Describing the Project Proposal.**

**1. A description of the proposed facilities and site.**

See Project Narrative which outlines the proposed project.

**2. A description of other present or most recent use and zoning.**

The project site is currently being used as the West Glenwood Park & Ride. The current zone district for this project parcel is M1, Mixed Use Corridor. See zone district map on page 22 for the zoning for the project site and adjacent parcels. Article 070.020 in the Glenwood Springs Municipal Code outlines each zone district and Table 070.030.020.1 outlines the allowed uses for each zone district. The COGS Planning Department has determined that a separate Special Use Permit is not required for this project.

**3. Vicinity map showing the proposed site, including proposed zoning designation, and the surrounding area.**

Please see page 22 showing the proposed site and zoning designation in relationship to the surrounding area.

**4. Executive summary of the proposal indicating the scope and need for the project.**

A summary of the project scope and associated need is provided on page 5 in this application.

**5. Plans and specifications of the project in sufficient detail to evaluate the application against the applicable review criteria.**

A complete plan set including a site plan, grading plan, utility plan, architectural plans, landscape plans and lighting plans is provided in conjunction with this document.

**6. Descriptions of alternatives to the project considered by the applicant. If the Community Development Director determines that the nature or extent of the proposal involves the potential**

***for significant damage and warrants examination of other specific, less damaging alternatives, the Community Development Director may require the applicant to evaluate and present information on such additional alternatives as part of the application.***

Not requested, not provided.

***7. Schedules for designing, permitting, constructing and operating the project, including the estimated life of the project.***

Construction is anticipated to begin on 2/2/25, pending approval of land use application. The project is expected to be completed in 9/30/26. See Appendix E for a more detailed project schedule that includes expected dates and deadlines throughout the estimated life of the project.

***8. The need for the project, including a discussion of alternatives to the project that were considered and rejected; existing/proposed facilities that perform the same or related function; and population projections or growth trends that form the basis of demand projections justifying the project.***

The project is needed to accommodate the ridership increase at the West Glenwood Park and ride. This ridership increase has caused a demand for climate controlled waiting space and bike parking. In addition, since the addition of Bustang at this location, there are multiple time during the day that many transit users are left outside waiting for their bus to arrive with no shelter from weather elements. Since this site is already an existing facility, the need to upgrade at this site makes the most sense. There are no other sites within the RFTA network that can be used as this currently is. This site is also important to transit users due to the close proximity to Interstate 70.

***9. Description of relevant conservation techniques to be used in the construction and operation of the project.***

Architectural and Building Strategies:

The design team has focused on minimizing major impacts to the existing site by focusing building placement at or near existing grades and utilizing the existing topography to reduce major cut and fill. Pre-cast construction is also being utilized to assist in the construction timeline reduce construction waste. Geothermal is being introduced into 6A to help offset energy costs.

Landscape Strategies:

The landscape plant palette focuses on native and drought tolerant plants. RFTA has committed to minimizing or eliminating permanent outside water use and irrigation for this project. The landscaping will be similar in appearance to the existing dryland landscape at the west-most intersection of Midland Avenue and Wulfsohn Road. This planting includes native sagebrush, rabbit brush, Rocky Mountain juniper, one-seed juniper, pinon pine, and ponderosa pine. Non-native deciduous trees will be used where shade is desired as there are very few deciduous trees native to Colorado suitable to use for this purpose. There will also be areas of non-native ornamental shrubs and grasses. The proposed non-native trees, shrubs, and grasses are adapted to and aesthetically compatible with the dryland conditions.

**10. Description of demands that this project expects to meet and basis for projections of that demand.**

This proposed project will meet the emerging transportation needs throughout the rapidly growing region. To accommodate the continuously growing population, the improvements and expansion to this transit station will ensure that regimented and continuous transportation services will be available to the public and transit users.

**11. List of adjacent property owners and their mailing addresses.**

See page 22 for a list of all adjacent parcel owners and their mailing addresses (if available) within 300' of the Phase 6A proposed development. The zone district map on page 22 illustrates the extents of 300' from the Phase 6A parcel boundary and shows which adjacent parcel owners are included in the list.

**(d) Scope of Proposed Project Relevant to Specific Designated Area and/or Activity.**

**1. Domestic water or sewage treatment systems and/or major extensions thereof.**

***a. Detailed plans of the proposal, including not less than thirty (30) percent engineering plans and specifications prepared by a registered professional engineer, and proposed system capacity and service area plans mapped at a scale acceptable to the Department.***

Not requested, not provided.

***b. A description of all existing or approved proposed domestic water or sewage treatment systems within the proposed project area.***

Not requested, not provided.

***c. A description of the design capacity of each domestic water or sewage treatment system facility proposed and the distribution or collection network proposed in the proposed project area.***

Not requested, not provided.

***d. A description of the excess capacity of each treatment system and distribution or collection network in the affected community or proposed project area.***

Not requested, not provided.

***e. A description of the operational efficiency of each existing system in the proposed project area, including the age, state of repair, and level of treatment.***

Not requested, not provided.

***f. A description of the existing water utilization, including the historic yield from rights and use by category such as agricultural, municipal, and industrial supply obligations to other systems.***

Not requested, not provided.

***g. A description of any impacts to the City's water resources used to serve the City's water service area.***

The expansion of the Transit center will result in an increase in impervious area. The additional impervious area will increase runoff from the site and the potential for sediment and pollutants to be carried in this runoff. The civil engineer's grading design captures runoff where feasible and diverts the runoff to water quality and detention facilities. These facilities will mitigate the sediment and pollutants in the runoff. The outlet structures of the facilities will restrict flows in the major and minor storms to be released at preconstruction rates to minimize adverse impacts on adjacent and downstream drainageways and properties.

A proposed underground storage facility within the lower parking lot shall be used for water quality and detention. Flows will be routed to the facility through proposed inlets and storm sewers. Flows will be released at historic rates to the north.

## **2. Major facilities of a public utility.**

### ***a. Specifications of approximate floor space of any office building, storage facility, or other enclosed structure.***

At the transit center, there is the proposed transit building that is one story and 3,232 gross square feet. The plan also has an enclosed bike storage facility and shade structures on the platform. See the architectural plans submitted separately for more detailed information regarding interior programming and associated square footages for the transit center building (Phase 6A).

RFTA is also proposing an administration office building on a separate parcel on the south side of Wulfsohn road, (Phase 6B) that is 10,820 gross square feet. The administration building is not subject to the Matters of State Interest review and is not a part of this application.

### ***b. Voltage and length of transmission lines.***

Not requested, not provided.

### ***c. The power source and generating capacity.***

Not requested, not provided.

### ***d. The function and size of any substation.***

Not requested, not provided.

### ***e. The diameter and length of any gas pipeline.***

Not requested, not provided.

### ***f. The capacity of storage tanks, and type of petroleum derivative to be stored.***

Not requested, not provided.

### ***g. The proposed service area.***

Not requested, not provided.

### ***h. The resource area (e.g. source of power being generated or transmitted, source of petroleum derivative being transported).***

Not requested, not provided.

***i. A computer modeled electromagnetic field measurement within the proposed transmission line easement for that portion of the transmission line between substations or transition sites.***

Not requested, not provided.

***j. Measures taken to comply with the concept of prudent avoidance with respect to planning, siting, construction, and operation of transmission lines, which may be those steps taken to comply with CCR 723-3 § 3206(9)(b) or similar authority, for projects where other similar authority is applicable.***

Not requested, not provided.

***k. Any impacts to vegetation and wildlife in the City.***

The project site is not an undeveloped parcel. There is currently a park-and-ride lot and bus station on this parcel and the proposed project includes improvements to this developed area so there is expected to be minimal impacts to native vegetation or contiguous wildlife habitat. Existing trees and native vegetation will be preserved to the highest extent possible. Revegetation and additional plant material is specified as needed to meet the requirement of 15% landscaped area on the parcel, to comply with the municipal code. See the landscape plan within the 50% DD plan set submitted separately for more information regarding limits of disturbance, revegetation areas, and proposed planting for the proposed project.

***l. Possible alternatives to underground transmission lines associated with the facility.***

Not requested, not provided.

***m. Visuals demonstrating impact to scenic resources.***

The project site is surrounded by existing and future development. The existing adjacent development includes the RFTA General Maintenance Facility and bus storage. Zoning for future development includes high density residential housing to the south of the project and mixed use to the east. The proposed development will be consistent in scale and appearance with the surrounding development context and will not be visually out of place to the casual observer. The materials proposed for the project will reflect those seen around Glenwood Springs downtown core and the design of the building is similar to others developed around the city so the building design and materials contribute visually to the sense of place. The ridgeline of Red Mountain is approximately 1500 vertical feet above the project site and the project will not impact the ridgeline.

Additionally, the Historical Resources review notes that the proposed project does not impact any historic visual resources.

### ***3. Efficient utilization of municipal and industrial water projects.***

***a. A description of efficient water use, recycling and reuse technology intended for the project. Such description shall include estimated stream transit losses of water, reservoir evaporation losses, and power and energy requirements of the project and project alternatives.***

Not requested, not provided.

***b. Map and description of other municipal and industrial water projects in the City and vicinity, including capacity and service levels, location of intake and discharge points, debt structure, fees and rates, and service plan boundaries.***

Not requested, not provided.

***c. A description of the water to be used, including the applicant's right to use the water, adjudicated decrees or determinations, quantity, and comments from reviewing authorities.***

Not requested, not provided.

***4. Development in areas containing, or having a significant impact upon, historical, natural, or archaeological resources of statewide importance.***

***a. A description of the existing natural environment and an analysis of the impacts of the project on the natural environment and natural resources, including water resources, wildlife, and air quality, to include maps and engineering analyses regarding the surface water quality, groundwater quality, water quantity, flood lands, wetlands, and riparian areas.***

As stated previously, the project site is not undisturbed, but is rather currently developed as a park-and-ride and transit station. A majority of the proposed development occurs within these disturbed areas. The provided Historic Resources review, Archaeological Resources review, and the Biological Resources review do not list any anticipated significant impacts due to this project.

***b. A description of proposals to mitigate any impact to the natural environment and natural resources, including to the watershed, wildlife, or air quality.***

The proposed development is not anticipated to have any major impacts to the surrounding environment due to the fact that the parcel is already developed. However, landscaping is proposed throughout the project to minimize the impact of the proposed site walls and improved transit center building. Drought tolerant and native plant species shall be proposed to promote local wildlife and blend into the natural environment. The Biological Resources review contains recommendations for construction to reduce impacts on wildlife.

***3. A description of the existing historical and archaeological resources in the proposed project area and a description of proposals to mitigate any impact to the existing historical and archaeological resources.***

The provided Archaeological Resources review finds no archaeological resources have been previously documented in the file search area. The provided Historical Resource review recommends a determination of "no adverse effect" pursuant to 36 CFR 800.5 of the NHPA. See Appendix G

***5. Development in areas around key facilities in which development may have a material effect upon the key facility or the surrounding community.***

***a. A description of the existing key facilities and an analysis of the impacts of the project on the key facilities and the surrounding community to include maps showing the key facilities and including traffic and use studies.***

Traffic study has been provided by RFTA/SGM. SEH's team has reviewed the provided traffic study and has worked with RFTA to provide the recommended turn lanes along Wulfshon. See attached civil plans for more detail and placement of these lanes.

***b. A description of proposals to mitigate the impact on the key facilities and surrounding communities.***

Per the COGS City Planner, RFTA will be subject to fees for a new lift station per the cost sharing agreement that applied to land within the Glenwood Meadows Subdivision parcels.

**(e) Proof of Notice. As provided under Section 070.080.280.**

Applicant shall mail noticing per 070.080.280. See neighboring property owner list, pg.22

**(f) Comments of Other Agencies. Any commentary received by other agencies with review authority over the proposal, including, without limitation, the state Department of Natural Resources, the state Department of Public Health and Environment, and any other federal, state, or local agency.**

The project is federally funded and is under direct observation of CDOT Region 3, who is administering a portion of the federal funding. Final approval will need to be received by CDOT prior to construction.

**(g) Demonstration of Need.**

***1. Population trends for the project area, including present population, population growth, and growth rates document the sources used.***

According to US Census Bureau data, the current population in Glenwood Springs is estimated at 10,264 as of July 1, 2022. The original transit stop was built in 2005 when the population in Glenwood Springs was significantly lower. Improving the transit station is necessary to support the expansion of RFTA services along the I-70 corridor. The location of this transit station is a central hub connecting communities west of I-70 (Parachute, Rifle, and New Castle) with resources up valley such as Glenwood Springs and Aspen. According to a transportation consultant that analyzed traffic patterns in this community, Fehr and Peer, "60% of inbound commuting trips to Glenwood Springs were from Rifle and New Castle".

Regarding future population growth, Garfield County reports that the County will experience continuous growth with the population expected to grow by more than 50% in the next 30 years.

***2. The predominant types of developments to be served by the proposed new systems and/or facilities or extensions thereof.***

Not requested, not provided.

***3. The percentage of design capacity at which the current system is now operating.***

Not requested, not provided.

***4. A description of conditions and projections that prohibit present facilities from being upgraded to adequately accommodate increased demand.***

This project entails updating an existing park-and-ride and transit stop for greater functionality as ridership increases.

### **5. Potential alternatives.**

Please see the introduction narrative for an overview of the need for the project and projected growth of ridership to be served by the project. There are no known viable alternative sites for this project.

### **(h) Property Rights, Other Permits, and Approvals.**

#### **1. Description of property rights that are necessary for or that will be affected by the project, including easements and property rights proposed to be acquired through negotiation or condemnation.**

RFTA currently owns the parcel proposed for development. All existing easements will remain.

#### **2. A list of all other federal, state, and local permits and approvals that will be required for the project, together with any proposal for coordinating these approvals with the City permitting process. Copies of any permits or approvals related to the project that have been granted.**

| JURISDICTION                     | TITLE                                   | CAUSE                                                                              | STATUTORY REFERENCE                                        | STATUS                                                                                                           |
|----------------------------------|-----------------------------------------|------------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| City of Glenwood                 | Location and Extent Permit (L&E)        | Project proposed by a quasi-governmental agency                                    | City of Glenwood Springs Code of Ordinances 070.060.050(d) | RFTA and application preparers are complying through this permit application and subsequent process for approval |
| City of Glenwood Springs         | Matters of State Interest (1041) Permit | Site selection of rapid or mass transit terminals, stations, and fixed guideways   | City of Glenwood Springs Code of Ordinances 070.080.030    | RFTA and application preparers are complying through this permit application and subsequent process for approval |
| City of Glenwood                 | Building Permit                         | New construction of commercial buildings                                           | City of Glenwood Springs Code of Ordinances 2022-16        | Once planning approval has been granted, project will be submitted for Building Permit review.                   |

| Colorado State of Transportation | CDOT Local Agency Project Approval      | CDOT is administrator of federal funding for 6A                                    | NA                                                         | 30% FIR completed. Waiting submittal of 30% FOR for review.                                                      |

**3. Copies of relevant official federal and state consultation correspondence prepared for the project; a description of all mitigation required by federal, state, and local authorities; and copies of any draft or final environmental assessments or impact statements required for the project.**

Please see attached Initial Site Assessment for this documentation. See Appendix K

**4. Details of the source and rights for the water supplies for the system, including any permits, decrees, or contracts for such rights, or the application submitted for change of water rights, appropriation of water, or augmentation plans.**

Not requested, not provided.

**5. Proof of ownership or a contractual right to develop the property.**

See Appendix A that includes proof of ownership and concurrent right to develop the property.

**(i) Land Use.**

**1. Provide a map at a scale relevant to the project and acceptable to the Community Development Department describing existing land uses and existing zoning of the proposed project area and the project service area, including peripheral lands which may be impacted. The land use map shall include but need not necessarily be limited to the following categories: residential, commercial, industrial, extractive, transportation, communication and utility, institutional, open space, outdoor recreation, agricultural, forest land and water bodies. Show all special districts (school, fire, water, sanitation, etc.) within the project area.**

See zone district map below, on page 31 that illustrate the project area and adjacent parcels. The proposed project is currently located in the Mixed Use Corridor (M1) zone district. According to the Glenwood Springs Municipal Code, Article 070.020.090, "The M1 district is intended to accommodate mixed-use development with walkable and active streetscapes on Glenwood's primary roadways. The mix of uses in the M1 district is intended to accommodate lighter-intensity commercial districts with limited auto-oriented uses compatible with surrounding residential neighborhoods. The M1 district is also intended to offer a diverse mix of housing opportunities at varying densities." The table below outlines the dimensional standards required for any proposed development within the M1 District.

The existing conditions of surrounding parcels are a mix of Mixed Use Corridor (M1), Light Industrial (I1), River Industrial (I2), Commercial (CO), and Hillside Preservation (HP) zoning districts. There are no special districts located within the project area.

| Table 020.11: M1 District   |                                      |      |
|-----------------------------|--------------------------------------|------|
| Dimensional Standards       |                                      |      |
| Lot Standards, Minimum      |                                      |      |
| A                           | Lot area (sq ft)                     | None |
|                             | Landscaped area (%)                  | 15   |
| Setbacks, Minimum           |                                      |      |
| B                           | Front, min (ft)                      | 5    |
|                             | Front, max (from arterials) (ft)     | 60   |
|                             | Front, max (from other streets) (ft) | 25   |
| C                           | Side, min (ft)                       | 5    |
| D                           | Rear, with alley, min (ft)           | 10   |
|                             | Rear, without alley, min (ft)        | 7.5  |
| Building Standards, Maximum |                                      |      |
| E                           | Building height (ft)                 | 40   |

**2. All immediately affected public land boundaries should be indicated on the map. Potential impacts of the proposed development upon public lands will be visually illustrated on the map as well as described in the text.**

See table below for a list of adjacent owners whose parcels are completely or partially contained within 300 ft. of the project site. The Existing Conditions Zone District map below contextualizes the Phase 6A parcel boundary and 300' offset from this parcel. A traffic impact study was performed to evaluate the project's contribution to overall traffic patterns and how any increased densities or impacts could be mitigated. See the summary of traffic study on page 48 and the full Traffic Impact Study report in Appendix B.

| Parcel Number | Account Number | Address                                          | Owner Name                            | Owner Address                                     |
|---------------|----------------|--------------------------------------------------|---------------------------------------|---------------------------------------------------|
| 218505338014  | R041501        | Not available                                    | CENTURA VENTURES LLC                  | 8100 E MINERAL CIRCLE ENGLEWOOD, CO 80112         |

### 3. Specify whether and how the proposed project conforms to the Comprehensive Plan.

Glenwood Springs Comprehensive Plan is a guide for making future land use decisions based on the collective values and visioning of the community. The Comprehensive Plan outlines strategies and actions to address future growth across various avenues such as; Land Use & Future Growth, Community Vitality, Tourism Management, Transportation & Mobility, Housing, etc. RFTA has been specified as a responsible party in the Comprehensive Plan to implement and promote transit oriented development. According to the Comprehensive Plan, "Redeveloped areas of the city provide the opportunity to create compact forms of development that are transit-supportive. These development types are located along transit corridors and are intended to support walking, biking, and public transit. The City and the Roaring Fork Transportation Authority (RFTA) should continue to promote redevelopment and the expansion of transit infrastructure to enhance the regional bus service, including Bus Rapid Transit (BRT) between Aspen and Glenwood Springs, and station improvements in Glenwood Springs."

The project supports the goals outlined in the Comprehensive Plan by improving and rebuilding aging infrastructure. The proposed project will be activating and expanding on an existing transit station to meet current and future demand of transit users. With the additional bus bays and improved site amenities, this development will enhance the commuter experience and promote transit oriented mobility in West Glenwood Springs.

In addition, looking at land use designations surrounding the proposed project site, the future development in this area shall include mixed-use and multi-family residential districts that will have a direct connection, due to their close proximity, to the transit center. Not only will the project be collecting

and encouraging commuters who are entering Glenwood Springs and heading up valley to take public transit, but the location makes it highly accessible to an expanding community in West Glenwood.

***4. Specify whether and how the proposed project conforms to applicable regional and state planning policies.***

RFTA has been in constant coordination with local agencies (COGS, CDOT) to ensure planning policies and application are being conformed to. Specifically, as part of the grant funding requirements, the project will be need approval from CDOT Region 3 after an extensive review prior to completion. CDOT will also manage a portion of the project during construction as well.

***5. Specify whether and how the proposed project conforms to applicable federal land management policies.***

There are no federal land uses applicable to this site.

***6. Specify how the proposed project will utilize existing easements or right-of-way to achieve project objectives.***

The Project relies on the use of the public right-of-way to provide transit services to the general public. No existing easements are necessary for the function of the project.

***7. If relevant to the project design, describe the agricultural productivity capability of the land in the project area, using Soils Conservation Service soils classification data.***

Not requested, not provided.

***8. Describe the probability that the project may be significantly affected by earthquakes, floods, fires, snow, slides, avalanches, rockslides or landslides and any measures that will be taken to reduce the impact of such events upon the project.***

Based on Geotechnical Report provided by WSP on August 25, 2023, the design team is following WSP's Compaction Grouting Ground Improvement with spread footings for building components to help combat poor existing soil conditions

***9. Specify if excess service capabilities created by the proposed project will prove likely to generate sprawl or strip development.***

Not requested, not provided.

***10. Specify whether the demand for the project is associated with development within or contiguous to existing service areas.***

The project is intended to serve the existing community and the projected population growth of the region. The success of the project is not dependent on additional development within the service area.

**(j) The Director may require submission of any plan, study, survey, or other information, in addition to the information required by this Section, at the applicant's expense, as in the Director's judgment is necessary to enable it to review and act upon the application.**

At time of submission, no additional information has been requested.

**(k) Any application which requires compliance with Section 24-65.5-101, et seq., C.R.S. (Notification to Mineral Owners of Surface Development), shall not be considered to have been submitted as complete**

until the applicant has provided a certification signed by the applicant confirming that the applicant or its agent has examined the records of the County Clerk and Recorder for the existence of any mineral estate owners or lessees that own less than full fee title in the property which is the subject of the application, and stating whether or not any such mineral estate owners or lessees exist. In addition, for purposes of the City convening its initial public hearing on any application involving property which mineral estate owners or lessees owning less than full fee title in the property have been certified by the applicant to exist, the application shall not be considered to have been submitted as complete until the applicant has provided an additional signed certification confirming that the applicant has, at least 30 days prior to the initial public hearing, transmitted to the City and to the affected mineral estate owners and lessees the notices required by Section 24-65.5-101, et seq., C.R.S.

Owner Certification is included in Appendix F

**(I) Project Development Schedule.**

***1. An estimate of the maximum number of employees, number of shifts and employees per shift during the following phases: construction, operation, and maintenance.***

The number of employees during construction will peak at approximately 50 with one 10 hour shift from 7 am to 5 pm Monday through Friday The number of employees during operation within the facility is estimated to be 5 with 2 shifts, 4 am to 1 pm and 1 pm to 10 pm The number of employees for maintenance in the facility and the grounds will be 2 daily between 6am and 5 pm.

***2. Information regarding any future phases or extensions of the facility and relationship of the facility (if currently foreseen) to larger programs and plans.***

No further phases or extensions of the facility are currently contemplated.

***3. A timetable for planning (e.g., federal permits, state permits, local zoning, etc.).***

Construction of the proposed project is expected to begin on 2/2/25, pending permit approvals. The table on page 19, outlines and describes all expected permits required for the project. Appendix E provides additional information regarding the anticipated schedule for the project.

***4. An estimate beginning and completion of construction and beginning of operation of facility or system.***

The project is expected to be completed and the facility to be in service by 9/30/26. Appendix E provides additional information regarding the anticipated schedule for the project.

***5. A description of any support facilities (e.g. pollution control parking areas, landscaping, etc.) to be provided.***

For a description of the landscaping and any potential impacts to vegetation and wildlife, please see page 13. As noted above, the design team is utilizing underground stormwater detention as indicated on the civil plans.

***6. A description of any feasible “non-structural” alternatives to meet the objectives of the proposed site selection and construction.***

Not requested, not provided.

**(m) Financial Information.**

***1. Relevant bond issue, loan and other financing approvals or certifications (ex: approved bond issues; bond counsel opinion).***

No Bond issue or council will be necessary for construction of this project. The project is funded by a FHWA RAISE grant(4.8 million) FTA LOW/NO grant (33 Million) and RFTA General Fund Balance.

***2. A description of the intended financial/economic impacts on the proposed project on the City and surrounding area.***

The improved transit system, due to a more efficient transit station, will help to continue to improve ridership and help reduce personal vehicle traffic across the Roaring Fork Valley. The additional electric bus chargers will also increase RFTA's use of this fleet and will help reduce the use of fossil fuel vehicles. The additional opportunities for Bustang this transit station will help to increase ridership across that system as well.

***3. Business plan that generally describes the financial feasibility of the project.***

RFTA has worked closely with FTA and other federal partners and have been awarded multiple grants to assist in payment for this project.

***4. A plan to offset increased demand on the City's existing facilities, systems, or public utilities.***

RFTA does not anticipate a major increases of demand as this project includes improvements to existing facilities and systems. The new design does implement improved water quality and geothermal systems to assist with heating and cooling of transit station.

**(n) Local Infrastructure and Service Impacts. An impact analysis that addresses the manner in which the applicant will comply with the relevant permit application review criteria. The impact analysis shall include the following information: description of existing capacity of and demand for local government services including but not limited to roads, schools, water and wastewater treatment, water supply, emergency services, transportation, infrastructure, and other services necessary to accommodate the project within the City.**

The net impacts are anticipated to be very minor as this project is to provide improvements to an already existing transit stop. The provided traffic study, drainage report, environmental impact assessment describe these impacts and the design responds to the recommendations in these report by incorporating them into the design.

**(o) Recreational Opportunities. Description of the impacts and net effect of the project on present and potential recreational opportunities.**

The project will not directly impact access to or use of nearby public open space. The increase ease of public transportation connectivity to the transit center from locations within and outside the City of Glenwood Springs will increase recreational opportunities for the public. This includes facilitating travel to the Glenwood Recreation Center, access to nearby hiking and mountain bike trails, and access to the Colorado River Whitewater Park, all located within walking distance of the station.

**(p) Social Impacts. A description of other intended social impacts of the proposed project, including, by way of illustration, increased access to relevant services.**

RFTA's goal for 6A is to improve the rider experience and increase services for the greater West Glenwood area for both RFTA and CDOT bus transit. The installation of the new electrical chargers for RFTA buses will also increase opportunities for their electric fleet in the future.

**(q) Areas of Paleontological, Historic, or Archaeological Importance. Description of the impacts and net effect of the project on sites of paleontological, historic, or archaeological interest.**

As previously stated, based on the provided historical and archaeological assessments, we see no impacts from this project.

**(r) Nuisance. Descriptions of noise, glare, dust, fumes, vibration, and odor levels anticipated to be caused by the project.**

RFTA sees no major impacts as each site being developed has similar pre-existing uses.

**(s) Air Quality. Description of the impacts and net effect that the project would have on air quality during both construction and operation, and under both average and worst case conditions, considering particulate matter and aerosols, oxides, hydrocarbons, oxidants, and other chemicals, temperature effects and atmospheric interactions.**

We see no major impacts as each site being developed have similar pre-existing uses.

**(t) Visual Quality. Description of the impacts and net effect that the project would have on visual quality, considering viewsheds, scenic vistas, unique landscapes or land formations within view of the project area.**

As described previously, the transit center project is a rebuild of the existing transit stop so the project will have minimal impacts on visual quality. There will be increased operations including the addition of bus bays and larger facilities however, due to the existing conditions currently operating as a bus stop, no significant impact to the viewsheds and scenic vistas is anticipated. The ridgeline of Red Mountain is approximately 1500 vertical feet above the project site and the project will not impact the ridgeline.

Additionally, the Historical Resources review notes that the proposed project does not impact any historic visual resources.

**(u) Surface Water Quality.**

***1. Map and/or description of all surface waters relevant to the project, including description of provisions of Region XII's regional water quality management plan, and NPDES Phase II Permit and necessary Erosion and Stormwater Quality Control Permit ("ESQCP"), Section 404 Federal Clean Water Act Permit that applies to the project and assessment of whether the project would comply with those provisions.***

Not requested, not provided.

***2. Existing data monitoring sources.***

Not requested, not provided.

**3. Descriptions of the immediate and long-term impact and net effects that the project would have on the quantity and quality of surface water under both average and worst-case conditions.**

The expansion of the Transit center will result in an increase in impervious area. The additional impervious area will increase runoff from the site and the potential for sediment and pollutants to be carried in this runoff. SEH will grade the site to capture runoff where feasible and divert the runoff to water quality and detention facilities. These facilities will mitigate the sediment and pollutants in runoff. The outlet structures of the facilities will restrict flows in the major and minor storms to be release at preconstruction rates to minimize adverse impacts on adjacent and downstream drainageways and properties. Each phase will have a different approach to this.

The Transit Center (Phase 6A) proposes an underground storage facility to be used for water quality and detention. Flows will be routed to the facility through proposed inlets and storm sewer. Flows will be released at historic rates to the north.

The Administration Building (Phase 6B) will propose inlets and storm sewer to carry flows to the west where they will join with existing infrastructure and be conveyed to the existing ponds on the northwest side of the site. These flows were accounted for in the master drainage plan. SEH will confirm that the proposed design will conform with the anticipated flows from the master drainage plan.

Storage Building A (Phase 8) will have little effect on the drainage patterns. Flows will be diverted overland around the building to the west as laid out in the master drainage plan. SEH will confirm that the proposed design will conform with the anticipated flows from the master drainage plan.

**(v) Groundwater Quality.**

**1. Map and/or description of all groundwater, including any and all aquifers relevant to the project. At a minimum, the description should include:**

- a. Seasonal water levels in each portion of the aquifer affected by the project.**
- b. Artesian pressure in said aquifers.**
- c. Groundwater flow directions and levels.**
- d. Existing aquifer recharge rates and methodology used to calculate recharge to the aquifer from any recharge sources.**
- e. For aquifers to be used as part of a water storage system, methodology and results of tests used to determine the ability of the aquifer to impound groundwater and aquifer storage capacity.**
- f. Seepage losses expected at any subsurface dam and at stream-aquifer interfaces and methodology used to calculate seepage losses in the affected streams, including description and location of measuring devices.**
- g. Existing groundwater quality and classification.**
- h. Location of all water wells potentially affected by the project and their uses.**

Not requested, not provided.

**2. Description of the impacts and net effect of the project on groundwater.**

Not requested, not provided.

**(w) Water Quality.**

**1. Map and/or description of existing stream flows and reservoir levels relevant to the project.**

Not requested, not provided.

**2. Map and/or description of existing minimum stream flows held by the state Water Conservation Board.**

Not requested, not provided.

**3. Descriptions of the impacts and net effect that the project would have on water quantity.**

While the net impacts are anticipated to be very minor, we do see increased water use due to additional fixtures from existing facilities.

**4. Statement of methods for efficient utilization of water, including recycling and reuse.**

Untreated raw water will be the exclusive source for irrigation of the landscaping and revegetation. Toilets and other plumbing fixtures have been selected for water efficiency.

**5. Descriptions on the impacts to riparian vegetation and fisheries.**

Not requested, not provided.

**(x) Floodplains, Wetlands, and Riparian Areas; Terrestrial and Aquatic Animals, Plant Life, and Habitat. Applicant shall only provide description of foregoing natural conditions, animal and plant life at, but not to exceed, the level of detail required by other federal or state permits or reviews which are applicable to the project.**

Not requested, not provided.

**(y) Soils, Geologic Conditions, and Natural Hazards.**

**1. Map and/or description of soils, geologic conditions, and natural hazards including but not limited to soil types, drainage areas, slopes, avalanche areas, debris fans, mud flows, rockslide areas, faults and fissures, seismic history, and wildfire hazard areas, all as relevant to the project area.**

See the Geotechnical Report included in the Appendix.

**2. Descriptions of the risks to the project from natural hazards.**

Poor soils are present on site which will require mitigation through tailored soil improvements and foundation design specific to this type of development.

**3. Descriptions of the impacts and net effect of the project on soil and geologic conditions in the area.**

Soils are to be improved in the area of disturbance as directed by the Geotechnical investigation. Proper stormwater management will also assist in improvement conditions on the site

**(z) Hazardous Materials.**

***1. Description of all solid waste, hazardous waste, petroleum products, hazardous, toxic, and explosive substances to be used, stored, transported, disturbed or produced in connection with the project, including the type and amount of such substances, their location, and the practices and procedures to be implemented to avoid accidental release and exposure.***

RFTA does not anticipate hazardous materials being generated by or used for this project.

***2. Location of storage areas designated for equipment, fuel, lubricants, and chemical and waste storage with an explanation of spill containment plans and structures.***

RFTA does not anticipate storage of these types of materials for this project.

**(aa) Monitoring and Mitigation Plan.**

***1. Description of all mitigation that is proposed to avoid, minimize or compensate for adverse impacts of the project and to maximize positive impacts of the project.***

RFTA has taken several measures to ensure quality control and mitigation of any adverse impacts from this project by contracting with multiple independent sub-contractors to ensure all the proper checks are being made for the design of the project. During construction, RFTA will sub-contract construction management services to ensure the selected contractor is adhering to the construction documents and other requirements.

***a. Describe how and when mitigation will be implemented and financed.***

This has been implemented and will continue throughout the duration of the project and is financed by RFTA.

***b. Describe impacts that are unavoidable that cannot be mitigated.***

RFTA does not anticipate any unavoidable adverse impacts which cannot be mitigated.

***2. Description of methodology used to measure impacts of the project and effectiveness of proposed mitigation measures.***

RFTA does not anticipate any impacts that will require measuring and mitigation.

***3. Description, location, and intervals of proposed monitoring to ensure that mitigation will be effective.***

Weekly Owner-Architect meetings are currently underway and weekly Owner-Architect-Contractor meetings with the Construction Management team will occur during construction.

***4. Emergency procedures to be used in the event of a fire, explosion, or other event which may endanger the public health, safety, and welfare.***

All building and site elements are being designed to mitigate or ensure code requirements are met. During construction, Contractor will be made responsible by means of the contract and other regulatory agencies to adhere to such procedures and to ensure they are in place during construction.

**(bb) Additional Information.** The Director may request that the applicant supply additional information related to the project if the Director and/or the Permit Authority will not be able to make a determination on any one of the applicable review criteria without the additional information. Such additional information may include applicant's written responses to comments by a referral agency.

At the time of this submission, no additional information has been requested.

EXISTING UTILITY NOTES – NON "SUE-REQUIRED PROJECT"

1. THIS PROJECT DOES NOT MEET THE CONDITIONS FOR A "SUBSURFACE UTILITY ENGINEERING-REQUIRED PROJECT," AS SET FORTH IN THE 8/8/2018 COLORADO STATE LAW. SEE CHECKLIST BELOW FOR WHY WE DETERMINED THIS TO BE NOT "SUE-REQUIRED". (NOTE: A PROJECT MUST MEET ALL 4 CONDITIONS)

| COLORADO REVISED STATUTES (CRS) 2018 TITLE 9-1.5-102 SUBSURFACE UTILITY ENGINEERING (SUE) REQUIRED PROJECT COMPLIANCE CHECKLIST |                             |                                                                                                                 |   |     |   |    |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-----------------------------------------------------------------------------------------------------------------|---|-----|---|----|
| 1                                                                                                                               | 9-1.5-1<br>02-6.8.A         | PROJECT INVOLVES CONSTRUCTION CONTRACT WITH A PUBLIC ENTITY                                                     | X | YES |   | NO |

| 3B                                                                                                                              | 9-1.5-1<br>02-6.8.C<br>.1.B | INVOLVES UTILITY BORING                                                                                         |   | YES | X | NO |
| 4                                                                                                                               | 9-1.5-1<br>03-2.4           | PROJECT REQUIRES THE DESIGN SERVICES OF A LICENSED PROFESSIONAL ENGINEER (P.E.)                                 |   | YES | X | NO |
| SUMMARY                                                                                                                         | 9-1.5-1<br>03-2.4           | REQUIRED TO MEET OR EXCEED THE ASCE 38 STANDARD AND CO SUE LAW?                                                 |   | YES | X | NO |

- \*\*\* NOTE: CHECKLIST ITEMS 2 THROUGH 5 ARE CURRENTLY IDENTIFIED AS "NO" AS THE EXACT SCOPE OF THE FUTURE PROJECT IS STILL UNKNOWN. THE PROJECT'S "SUE-REQUIRED STATUS" SHOULD BE REEVALUATED IN THE FUTURE.
2. EXISTING UTILITIES ARE DEPICTED ACCORDING TO THE BEST AVAILABLE INFORMATION THAT WAS PROVIDED BY THE UTILITY OWNERS AND SURFACE FEATURES AT THE TIME OF THE SURVEY. RELIANCE UPON THIS UTILITY DATA FOR RISK MANAGEMENT PURPOSES DOES NOT RELIEVE CLIENT/CONTRACTOR OR UTILITY OWNER FROM FOLLOWING ALL APPLICABLE UTILITY DAMAGE PREVENTION STATUTES, POLICIES, AND/OR PROCEDURES DURING EXCAVATION. PRIOR TO EXCAVATION, CLIENT/CONTRACTOR SHALL CONTACT THE UTILITY NOTIFICATION CENTER OF COLORADO (UNCC) AT 811 OR 800-922-1987, TO VERIFY EXISTING UTILITIES AND HAVE LOCATIONS OF UNCC REGISTERED LINES MARKED BY MEMBER COMPANIES.
3. UTILITY QUALITY LEVELS ARE GENERALLY DEFINED BELOW. REFER TO ASCE 38 FOR MORE INFORMATION:
- 3.1 UTILITY QUALITY LEVEL "D" (QLD) – A VALUE ASSIGNED TO A SUBSURFACE UNDERGROUND UTILITY SEGMENT OR UTILITY FEATURE, WHOSE ESTIMATED POSITION IS JUDGED THROUGH UTILITY RECORDS, INFORMATION FROM OTHERS (SUCH AS UNCC 811 FIELD MARKS), OR FROM VISUAL CLUES SUCH AS PAVEMENT CUTS, OBVIOUS TRENCHES, OR EXISTENCE OF SERVICE.
- 3.2 UTILITY QUALITY LEVEL "C" (QLC) – A VALUE ASSIGNED TO A SUBSURFACE UTILITY SEGMENT, WHOSE ESTIMATED POSITION IS JUDGED THROUGH CORRELATING UTILITY RECORDS OR SIMILAR EVIDENCE TO UTILITY FEATURES, VISIBLE ABOVE AND/OR BELOW GROUND.
- 3.3 UTILITY QUALITY LEVEL "B" (QLB) – A VALUE ASSIGNED TO A SUBSURFACE UTILITY SEGMENT OR SUBSURFACE UTILITY FEATURE WHOSE EXISTENCE AND POSITION IS BASED UPON GEOPHYSICAL METHODS COMBINED WITH PROFESSIONAL JUDGMENT AND WHOSE LOCATION IS TIED TO THE PROJECT SURVEY DATUM.
- 3.4 UTILITY QUALITY LEVEL "A" (QLA) – A VALUE ASSIGNED TO THAT PORTION OF A SUBSURFACE UTILITY SEGMENT OR SUBSURFACE UTILITY FEATURE THAT IS DIRECTLY EXPOSED (OR VERIFICATION OF PREVIOUSLY EXPOSED AND SURVEYED UTILITIES), MEASURED, AND WHOSE LOCATION AND DIMENSIONS ARE TIED TO THE PROJECT SURVEY DATUM. (E.G. A TEST HOLE OR TEST PIT.)
4. OTHER UTILITIES MAY BE PRESENT WHICH WERE NOT IDENTIFIED IN THIS PLAN SET OR PRIOR TO CONSTRUCTION. IT IS THE CONTRACTORS RESPONSIBILITY TO ENSURE DUE-DILIGENCE AND ENACT GOOD PRACTICES WHEN EXCAVATING NEAR POTENTIAL CONFLICT AREAS AND REDUCE POTENTIAL FOR DAMAGE TO FACILITIES AS MUCH AS POSSIBLE.
5. SHOULD THE CONTRACTOR ENCOUNTER UNKNOWN AND/OR ABANDONED UTILITY FACILITIES THE CONTRACTOR SHALL VERIFY WITH THE RESPECTIVE UTILITY OWNER THAT THE UTILITY MATERIAL IS INACTIVE/ABANDONED BEFORE REMOVAL FROM THE WORK AREA
6. THE CLIENT/CONTRACTOR SHALL COMPLY WITH COLORADO REVISED STATUTES (CRS) 2018, TITLE 9, ARTICLE 1.5-103 (10), "ALL NEW UNDERGROUND FACILITIES, INCLUDING LATERALS UP TO THE STRUCTURE OR BUILDING BEING SERVED, INSTALLED ON OR AFTER 8/8/2018, MUST BE ELECTRONICALLY LOCATABLE WHEN INSTALLED."

#### LEGEND FOR RADII

A = 1/8" TO 1/4"  
B = 1"  
C = 1 1/2"  
D = 1 1/2" TO 2"

#### GENERAL NOTES

- ALL SUBBASE IS TO BE SCARIFIED AND COMPACTED PRIOR TO PLACEMENT OF CLASS 6. PROOF ROLL TEST ARE TO BE PERFORMED FOR EACH TRAVEL LANE & PARKING AREAS PRIOR TO PLACEMENT OF CLASS 6 ABC.
  - CONCRETE SHALL BE CLASS D.
  - A MIN. OF 4" CLASS 6 ABC SHALL BE PLACED UNDER CURB & GUTTER SECTIONS.
  - DUMMY JOINTS FOR GUTTER TYPE 2 & CURB & GUTTER ARE TO BE SPACED AT 10 FT. ACCORDING TO CDOT SPEC. 609
- EXPANSION JOINTS SHALL BE INSTALLED WHEN ABUTTING EXISTING CONCRETE OR FIXED STRUCTURE. EXPANSION JOINT MATERIAL SHALL BE 1/2 IN. THICK AND SHALL EXTEND THE FULL DEPTH OF CONTACT SURFACE.
- ① GUTTER CROSS SLOPES SHALL BE 1/2 IN./FT. WHEN DRAINING AWAY FROM CURB AND 1IN./FT. WHEN DRAINING TOWARD CURB.

\*: FRAME, COVER, SHIMS & CROSS BRACING SHALL BE FABRICATED OF STEEL

\*\*: FASTEN COVER TO FRAME W/ 1/8" STAINLESS STEEL SCREWS WITH COUNTERSUNK HEAD

**CHASE DRAIN DETAIL**  
N.T.S.

**NOTE:**

- BARS AND DOWELS TO BE GREASED PRIOR TO SECOND POUR.
- ALL BARS AND DOWELS TO BE EPOXY COATED.

30"x NO.5 TIE BARS TO BE 24" O.C., CENTERED BETWEEN JOINTS AS SHOWN ON PLAN

24"x1" Ø DOWEL TO BE PLACED 6" FORM JOINTS THEN 12" O.C. (3) DOWELS FROM JOINT (TYP)

SEE DOWEL SPACING IN TRAVEL LANES ON PLAN VIEW.

|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Agenda Item:</b>          | Fire Evacuation Presentation                                                                                                                                                                                                                                                                                                                                  |
| <b>Action Requested:</b>     | The City completed its evacuation plan this summer, distributed it through our regular channels and held a public event. As a result of recent wildfire activity in California and a small flare-up near Wal-Mart there has been renewed public interest in the particulars. This is an opportunity to re-highlight the plan and re-promote public awareness. |
| <b>Department:</b>           | City Administration                                                                                                                                                                                                                                                                                                                                           |
| <b>Presented By:</b>         | Joseph Deras, Steve Boyd                                                                                                                                                                                                                                                                                                                                      |
| <b>Strategic Goals:</b>      | Provide Efficient and Responsive City Government<br>Protect and Preserve our Quality of Life<br>Ensure Public Safety                                                                                                                                                                                                                                          |
| <b>Background Info:</b>      | Provide Council with an abridged update on the adopted evacuation plan. Initial plan adopted by Council in 2024.                                                                                                                                                                                                                                              |
| <b>Issues:</b>               | As fire season approaches and after several high profile fires on the west coast, an update on the city plan, access to the plan and steps moving forward.                                                                                                                                                                                                    |
| <b>Fiscal Impact:</b>        | NA                                                                                                                                                                                                                                                                                                                                                            |

## Adoption

This document provides guidance for implementing the City of Glenwood Springs Emergency Operations/ Traffic Emergency Management Plan in coordination with other Garfield County emergency plans as well as the City of Glenwood Springs supporting policies, procedures, operational guidelines, and processes. The City of Glenwood Springs has adopted the Garfield County Emergency Operations Plan (2015) and the Garfield County Traffic Incident Management Plan (2022). Copies of these documents and all supporting appendices are available by contacting the City of Glenwood Springs.

## Document Development and Acknowledgements:

This document was developed for the City of Glenwood Springs. The Emergency Operations/ Traffic Emergency Management Plan is a collaborative community effort among several multi-disciplinary agencies and organizations. The following organizations participated in the development of this plan:

- Glenwood Springs City Administration
- Glenwood Springs Fire Department
- Glenwood Springs Police Department
- Glenwood Springs Parks and Recreation Department
- Glenwood Springs Public Works
- Garfield County Sheriff's Office
- Garfield County Emergency Communications Authority
- Colorado State Patrol
- Colorado Department of Transportation
- RE-1 School District
- Colorado Mountain College
- St. Stephen Catholic School
- Yampa Mountain High School
- Two Rivers Community School
- Valley View Hospital
- Sunnyside Retirement Center
- Mountain Valley Developmental Services
- Roaring Fork Senior Living
- Colorado Parks and Wildlife
- Glenwood Springs Chamber Resort Association
- Union Pacific Railroad
- Roaring Fork Transportation Authority
- Glenwood Springs Adventure Park
- Glenwood Springs Health Care
- Garfield County Public Health

## Plan Maintenance, Revision, and Distribution

Ownership of the plan will be the responsibility of the City Manager. The advisory council consisting of the City Manager, Fire Chief, Deputy Fire Chief, and Police Chief will be responsible for the maintenance, revisions, and distribution of the plan. The plan will be reviewed annually by the advisory council and undergo a full stakeholder review every five years. The reviews may result in amendments to the plan based on input received from a range of stakeholders, including the City of Glenwood Springs staff, state and county partner agencies, and the community.

## Record of Maintenance and Revision

The City Manager will coordinate the maintenance and revisions of the plan. Review and updates of specific portions of the plan will be accomplished by key staff members/agencies with the best knowledge of the subject matter.

| Date | Part Affected | Summary of Activity | Entry Made By |
|------|---------------|---------------------|---------------|
|      |               |                     |               |
|      |               |                     |               |
|      |               |                     |               |
|      |               |                     |               |

**Certification of Annual Review**

This Emergency Operations/ Traffic Emergency Management Plan has been reviewed by the advisory council consisting of the City Manager, Fire Chief, Deputy Fire Chief, and the Police Chief, and is signed off by the City Manager.

## Glenwood Springs Emergency Operations/ Traffic Emergency Management Plan

### Distribution List

This plan and its supporting material are controlled documents and are not open to the public in its entirety. Distribution is based upon a regulatory or functional “need to know” basis. Copies of this plan will be given to those approved agencies/departments. The master “Official” plan will be maintained by the City Manager.

| Office/Department | Name or Recipient | Plan Date | Date Received |
|-------------------|-------------------|-----------|---------------|
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |
|                   |                   |           |               |

## Approval and Implementation

The ability to respond to a man-made or natural disaster is a necessary function of government. Common to all emergency situations are functions that require the protection of life and property. Specifically, these functions include planning, the identification of responsibilities, various warnings, evacuations, communication, traffic management, direction and control of resources, public information, resource management, damage assessment, and sheltering.

The Emergency Operation/ Traffic Emergency Management plan provides direction and guidance for all hazard responses to deal with the many complexities during an emergency event.

This plan supersedes all previous plans.

Date this \_\_\_\_\_ Day of \_\_\_\_\_, 2023

## EXECUTIVE SUMMARY

The City of Glenwood Springs has experienced several natural and human-caused disasters and emergencies requiring action from all first responders and support personnel within the boundaries of the Glenwood Springs Rural Fire Protection District. As a result of these emergency/disaster situations, the Glenwood Springs community and those traveling to and through Glenwood Springs are significantly impacted. The traffic volume, specifically during the morning and evening work rush, becomes an issue not only for the community but for first responders answering calls for service. With the significant history of wildfire, requiring the evacuation of the city and areas within the boundaries of the Glenwood Springs Fire Department, an emergency operations plan will serve as a benefit to everyone affected.

The Glenwood Springs Emergency Operations/ Traffic Emergency Management plan focuses on an all-hazards recognition and approach to natural and human-caused disasters/emergencies. This plan was developed to work in harmony with other existing emergency management/operations plans that are active in this area while under the guidelines and principles of the Federal Emergency Management Agency's (FEMA) National Incident Management System (NIMS) model. These guidelines and principles help responders work together to respond, mitigate, and recover from a variety of hazards. The guidelines include Incident Command/Unified Command to help manage authority roles, management structure, communication, procedures, and many other aspects when dealing with an incident.

During the development of the Glenwood Springs Emergency Operations/ Traffic Emergency Management plan several stakeholder groups were identified as part of a whole community approach. Through the stakeholder engagement process, various government agencies and community groups added value with their input. This input generated perspective surrounding past significant emergency events, collaboration on preparation and response, insight on how the City of Glenwood Springs can assist during a crisis, and how stakeholders can assist the city.

Through the stakeholder engagement process, hazards surrounding the identified footprint of this plan were identified as:

- Wildfire
- Flood
- Landslide, Mud/Debris Flow, and Rockfall
- Bridge Compromised
- Hazardous Materials Release
- Severe Winter Weather
- Major Traffic Crash, Aircraft Incident
- Violent Acts - Civil Disturbance
- Power Surges / Outages
- Structure Fire
- Train Derailments

As a result of these identified hazards, a response plan was developed with a concept of operations which outlines roles and responsibilities by agency and discipline. Communication amongst all agencies is a key function of response and coordination, so two communication

plans were developed to enable all responders to communicate more effectively and efficiently. One communication plan is for the interoperability of all responders in Glenwood Springs and Garfield County, while the other is an operability plan for primarily Glenwood Springs responders and resources.

Incident notification, response, and mitigation for an all-hazards approach can affect traffic in various ways. Since the Garfield County Traffic Incident Management Plan (2022) provides guidance surrounding traffic-related emergencies along I-70 and State Highway (SH) 82, all responders should refer to that plan for guidance.

Through the stakeholder engagement process, traffic management during emergency events was a present factor in the planning process. As a result, the plan identifies and maps out critical intersections, critical facilities, areas of refuge/safe zones, human shelters, animal shelters, passenger and commercial motor vehicle storage locations, evacuation routes, and evacuation zones. Evacuation routes consist of US 6, Donegan Road, Storm King Road, Mel Ray Road, East 6<sup>th</sup> Street, Midland Avenue, 8<sup>th</sup> Street, Grand Avenue (SH 82), South Glen Avenue (SH 82), 27<sup>th</sup> Street, 3-Mile Road (GCR 127), 4-Mile Road (GCR 117), and Dry Park Road (GCR 125). The I-70 emergency access line breaks will be a key factor, and a procedure has been developed to utilize the access line breaks once constructed.

During the planning process, 68 evacuation zones (GWS 7001 - GWS 7068) were identified, mapped out, and labeled from the west to the east. These evacuation zones all have a primary evacuation route with alternate routes available for the Incident Command to consider. An evacuation guide was also developed for responders which combines selected evacuation zones with pre-identified evacuation routes. Key traffic control locations, the placement of personnel, and recommended traffic control devices supplement the evacuation guide. The identified traffic control locations can also apply to other emergencies that affect traffic.

Public communication/notification was also recognized as an important factor during emergency situations. By utilizing a combination of emergency notification alerts from the Garfield County Emergency Communications Authority, the City of Glenwood Springs Public Information Officer, the Colorado Department of Transportation's messaging tools, and the Colorado State Patrol's Montrose Regional Communication Center, public information and messaging will be able to reach the population affected by an emergency.

Area schools, assisted living facilities, and other vulnerable population stakeholders contributed and provided details on their facility's processes during an emergency. This plan provides valuable personnel contact and facility information for area schools, assisted living facilities, and Valley View Hospital. Garfield County Public Health will be able to assist the City of Glenwood Springs in identifying and listing vulnerable people who may need assistance during an emergency.

The Glenwood Springs Emergency Operations / Traffic Emergency Management plan is subject to annual reviews, revision when required, and a full stakeholder review every five years. It is approved and implemented by the city manager who will also be the authority for its distribution. This a living document, subject to change and revisions to best serve the community of Glenwood Springs, emergency responders, and all people who visit to enjoy the amenities surrounding Glenwood Springs.

## 1 INTRODUCTION

The Glenwood Springs Emergency Operations/ Traffic Emergency Management Plan operates on the principle that local government bears the initial responsibility for response to an emergency. As a product of this principle, each level of government will accomplish the functions for which it is statutorily responsible and will coordinate response and activities with other entities using the National Incident Management System model of Unified Command.

The City of Glenwood Springs and surrounding communities face a number of hazards and public safety threats that affect the safety and mobility of emergency responders and all roadway users. These hazards may also require the movement or evacuation of people out of a dangerous or closed area or roadway. The safe evacuation and protection of people and the movement of traffic can be complex and requires planning, communication, commitment, and cooperation of several responder agencies and organizations.

Due to the location and geography of Glenwood Springs, there are only three major ingress and egress routes for all roadway users utilizing Interstate 70 (I-70) and State Highway 82 (SH 82). There are two canyons that access Glenwood Springs from East to West that have no notable alternate routes. SH 82 is also problematic, as it is closed during the winter months over Independence Pass. Compounding the situation is Glenwood Springs's seasonal population variation and that it is the center hub for all commuter traffic to other popular tourist communities as well as the work force supporting those communities.

## 2 PURPOSE

Major traffic emergencies and natural disasters are unique events that present communities and emergency personnel with extraordinary problems and challenges that cannot be adequately addressed within the routine operations of local government. The purpose of this plan is an all-hazard approach that provides guidance for all responders to those emergencies which includes the management of traffic that requires restricted access and/or evacuation of the City of Glenwood Springs and within the District of the Glenwood Springs Fire Department (GSFD).

Since disasters differ in important ways and it is impossible to plan for every contingency, highly detailed operational procedures are avoided in the plan in favor of a streamlined all-hazard preparedness approach. This plan is intended to provide city officials and participating agencies with the basis for the coordinated management of major incidents so that impacts are minimized to people, property, public services, and the economy. The goal is to restore normal community conditions as quickly as possible.

This plan also documents operational strategies to carry out the safe and effective movement of traffic in and around Glenwood Springs during a public safety emergency. It identifies shelters and other resources owned and operated by participating agencies.

The plan details significant public safety emergencies and defines roles and responsibilities during an emergency traffic management situation. It builds on the coordination and support of other emergency plans and various public safety agencies. It is focused on an all-hazard

framework for incident response, notification, traffic management, evacuation, sheltering, and re-entry from the whole community perspective. It details anticipated evacuation guidelines, needs, and progression during an emergency event. This plan identifies and provides protocols for alternate and evacuation routes, key traffic management locations, vehicular and staging areas, communication (responder/community), safe zones/areas of refuge/shelters, and post-incident protocols.

## 2.1 Scope and Applicability

This plan will apply to all participating agencies and departments within the geographical boundaries of the Glenwood Springs Fire Department. **Figure 1** shows the plan boundaries in **2.6**. This is an all-hazards approach to coordinate efforts for emergency operations and traffic management from a multi-discipline perspective. The plan is designed to be used in conjunction with the Garfield County Emergency Operations Plan and the Garfield County Traffic Incident Management Plan.

## 2.2 Authority

C.R.S. § 24-33.5-709 empowers local governments to declare a "local disaster." Upon that declaration, the response and recovery aspects of any and all local and interjurisdictional disaster emergency plans are activated.

C.R.S. § 30-10-512; the sheriff of every county, in addition to other duties, shall act as fire warden of his or her respective county and is responsible for the coordination of fire suppression efforts in case of prairie, forest, or wildland fires or wildfires occurring in the unincorporated area of the county outside the boundaries of a fire protection district or that exceed the capabilities of the fire protection district to control or extinguish.

### C.R.S § 24-33.5-703 Definitions

(3) "Disaster" means the occurrence or imminent threat of widespread or severe damage, injury, or loss of life or property resulting from any natural cause or cause of human origin, including but not limited to fire, flood, earthquake, wind, storm, wave action, hazardous substance incident, oil spill or other water contamination requiring emergency action to avert danger or damage, volcanic activity, epidemic, air pollution, blight, drought, infestation, explosion, civil disturbance, hostile military or paramilitary action, or a condition of riot, insurrection, or invasion existing in the state or in any county, city, town, or district in the state.

(3.5) "Emergency" means an unexpected event that places life or property in danger and requires an immediate response through the use of state and community resources and procedures.

The City of Glenwood City Ordinance 2023-12 - Disaster Emergency Services; The City Manager or an authorized designee shall serve as the City Disaster Coordinator. Upon the issuance of a declaration of civil emergency, emergency, or local disaster, the City Manager may exercise powers, and the enforcement of orders as described in this ordinance.

## Legal Authority in Disasters

**Figure 1. Legal Authority for Disasters**

## 2.3 Situation Overview

Due to the location and geography of Glenwood Springs, there are only three major ingress and egress routes for all roadway users utilizing I-70 and SH 82. I-70 is a designated hazardous material route and there is an active rail line that travels through the city. There are two canyons that access Glenwood Springs from East to West that have no notable alternate route. SH 82 is also problematic, as it is closed during the winter months over Independence Pass. The residential population of the city and surrounding area increases according to season and time of day. According to the Glenwood Springs Chamber Resort Association, and based on monthly lodging tax figures, the seasonal population increases during the months of June - September. [TRENDS ONLINE 2022 Year End Issue \(growthzoneapp.com\)](https://www.growthzoneapp.com). Additionally, traffic in Glenwood Springs fluctuates depending on the time of day and day of week, however, during the morning rush (5:00am-10:00am) 45% of traffic passes through Glenwood Springs and 45% are traveling to Glenwood from outside the community. During the evening rush (2:00pm-7:00pm) 37% of traffic passes through Glenwood while 44% travel to Glenwood. This information was provided by the City of Glenwood Springs (COGS) Transportation Study Update, February 2023.

Glenwood Springs has a significant wildfire history. From 1994-2020, eleven wildfires destroyed 47,341 acres, 33 ¾ structures, and took the lives of 14 fire fighters. Additionally, I-70 often gets closed, through Glenwood Canyon and South Canyon, due to a variety of circumstances. There are no continuous adjacent alternate routes along I-70 for motorists and roadway users. SH 82 runs South out of Glenwood Springs and is the direct route to the Towns of Carbondale, El Jebel, Basalt, and the Cities of Snowmass Village and Aspen. Along SH 82 there are many steep hillsides prone to mud/rockslides. During the winter months (Nov. - May), SH 82 through Glenwood Springs serves as the only direct route to those communities.

## 2.4 Geography

The City of Glenwood Springs covers approximately eight square miles and has a population of 11,013 in 2023 based on the 2020 census with an annual increase of 3.27% based on [Colorado Cities by Population \(2023\) \(worldpopulationreview.com\)](https://www.worldpopulationreview.com). The Glenwood Springs Fire Department (GSFD) covers 72 square miles. The GSFD coverage area encompasses approximately 16,000 residents, with just over 11,000 residents within the City of Glenwood Springs. The seasonal (Summer) population increases by 30-40 percent as visitors arrive to enjoy the amenities of Glenwood Springs. The coverage area includes public land (Bureau of Land Management, United States Forest Service, Garfield County, Glenwood Springs, etc.) as well as private land, see **Figure 2** for details. Within the boundaries of the Glenwood Fire Department, many jurisdictions operate to save lives and property. All the jurisdictions that operate in this area rely on mutual and automatic aid support when needed and requested. Some jurisdictions have an Memorandum of Understanding (MOU) in place while others are defined in other emergency plans. **Table 1** is a list of emergency disciplines & agencies.

**Figure 2. Glenwood Springs Fire and City Boundaries**

## 2.5 Prior Actions

Prior actions taken by the City of Glenwood Springs and other stakeholder agencies to minimize an incident's impacts on the area are:

- Two Access Line Breaks are to be built to access I-70 from Storm King Road and West 1<sup>st</sup> Street.
- A planned and designed second bridge to manage traffic from the southern end of the city to help serve communities on 4-Mile Road, 3-Mile Road, and South Glenwood Springs.
- The Garfield County Traffic Incident Management Plan was developed to assist emergency responders in all traffic-related emergencies.

## 2.6 Hazard Profile

The Garfield County Hazard Mitigation Plan evaluated a range of natural and man-made hazards that pose a risk to the county and communities. During the planning process, the local planning team identified specific hazards of top concern for the Glenwood Springs Fire Department (GSFD) which required a more nuanced and in-depth discussion of local events, vulnerabilities, and mitigation actions. These are the top four hazard concerns identified by the GSFD local planning team.

- Wildfire
- Flood
- Severe Winter Weather
- Hazardous Materials

Hazardous conditions can result from a number of human-caused incidents and natural phenomena. Based on stakeholder input these are additional hazards that were presented:

- Structure Fire
- Rock and Mud Slides
- Civil Disturbances
- Train Derailments
- Power Outages

As a result of all the information provided a Table of Hazards was created, see **Table 2**.

**Table 2. Table of Hazards**

| Hazard Category | Action and challenges                                                                                                                                                                                                 | Areas of Concern                                                                                                                                                                                                                                                                                         |

Figure 3. Glenwood Springs Critical Facilities

## 2.7 Assumptions

Response operations will be managed according to the Incident Command System (ICS) and National Incident Management System (NIMS) principles. This plan uses these principles to coordinate actions with other response and recovery functions.

Depending on the size, location, and scope of an evacuation, (local, county, state, and federal) resources may be limited due to significant impacts on local first response and emergency management agencies. Prioritization of efforts will be given to immediate life safety and health needs.

An emergency event may occur at any time of day or night and in any kind of weather, traffic congestion should be expected and can be chaotic.

The City has the primary responsibility for traffic management and emergency evacuation of residents and visitors within the City Limits of Glenwood Springs.

Garfield County has primary responsibility for emergency evacuation of residents and visitors in unincorporated areas.

Area schools, RE-1 School District, Valley View Hospital, assisted living facilities, and area businesses serving large tourist populations have the primary responsibility to evacuate populations and, in some cases, provide accountability for their populations.

The City of Glenwood Springs could have large numbers of visitors and tourists present during an emergency, due to the large local tourism industry. The size of the visitor population is dependent upon the season, the time of day, month, and year.

When a jurisdiction receives a request for assistance from another jurisdiction, reasonable actions will be taken to provide assistance.

If given a clear warning and direction, most people will follow evacuation orders; however, some individuals will not evacuate regardless of risk.

Most evacuees will find shelter with friends, relatives, or hotels and will not require a shelter.

Most people will self-evacuate in their own vehicles.

Personal preparedness is essential to effective evacuation. This is particularly true for individuals with disabilities and those with access and/or functional needs who may require additional time and assistance in evacuation.

## 3 CONCEPT OF OPERATIONS

All emergency responses within the footprint of this plan will follow the National Incident Management System (NIMS) that has been specified by the Federal Emergency Management Agency.

[National Incident Management System \(fema.gov\)](https://www.fema.gov)

### 3.1 Incident Command System

The Incident Command System (ICS) is a command-and-control protocol for use by responding agencies at the incident scene. The ICS is just one part of the broader incident management process outlined in NIMS and will be used for all incidents. When an incident occurs within a single jurisdiction and without jurisdictional or functional agency overlap, the appropriate authority designates a single Incident Commander who has overall incident management responsibility. In cases where incident management crosses jurisdictional and/or functional agency boundaries, the various jurisdictions and organizations may still agree to designate a single Incident Commander. **Figure 4** depicts an example organizational structure for an ICS organization with a single Incident Commander.

**Figure 4. Example of an ICS Organization with a Single Incident Commander**

### 3.2 Unified Command

Unified Command improves unity of effort in multijurisdictional or multidisciplinary incident management. The use of Unified Command enables jurisdictions and those with authority or functional responsibility for the incident to jointly manage and direct incident activities

through the establishment of a common set of incident objectives and strategies. Each participating partner maintains authority, responsibility, and accountability for its personnel and other resources, and each member of Unified Command is responsible for keeping other members of Unified Command informed. **Figure 5** depicts an example organizational structure for an ICS organization with Unified Command (UC).

**Figure 5. Example of an ICS Organization with Unified Command**

A basic premise of the Glenwood Springs Emergency Operations/Traffic Management Plan is that incidents are generally handled at the lowest jurisdictional level possible. Police, fire, emergency medical services, and other first responders are responsible for incident management and coordination at the local level. In the vast majority of incidents, local resources, county, and state mutual aid resources provide the first line of emergency response and incident management support. If the incident appears to go beyond the capabilities of the local jurisdiction, the Garfield County Emergency Manager will be notified to provide supplemental assistance. If necessary, an Emergency Operations Center (EOC) can be activated. All agency and department Memorandum of Understanding (MOUs) or Intergovernmental Agreements (IGAs) will be applied according to those agreements.

Planning for recovery will be implemented at the same time local government, agencies, and organizations are taking emergency response action necessary to protect the public. Preparations will be taking place for the deployment of resources to facilitate recovery.

## 4 ROLES AND RESPONSIBILITIES

### City of Glenwood Springs Staff and Administration:

- Development, coordination, dissemination, and training of the plan
- Disaster declaration
- Evacuation orders and re-entry decisions
- Assist in evacuation/traffic management within capabilities and as requested
- Assistance from other jurisdictions
- Activate an EOC, as necessary, to provide resource support and to maintain liaison with State and Federal authorities and authorities of other external support.
- Damage assessment
- Engineering services as needed

### Communication Authority:

- Lead agency for dissemination of emergency messages/warnings when directed by the Incident/Unified Command
- Emergency response notifications
- Notifications to other communication centers and TMCs

### Fire Agencies & EMS:

- Fire and emergency medical response
- Emergency medical transport
- Recommending and assisting in evacuation if the situation warrants
- Assist in the dissemination of emergency warnings within capabilities as directed by Incident/Unified Command
- Assist in evacuation and traffic management within capabilities and as requested
- Decontamination
- Damage Assessment
- Assist with the special needs population

### Law Enforcement:

- Emergency response to all hazard events
- Emergency evacuation route assistance
- Assist in dissemination of the emergency warnings as directed by Incident/Unified Command
- Coordinate transportation to shelters for those who need transportation assistance using buses, Emergency Medical Services (EMS), or other appropriate vehicles
- Emergency traffic control and crowd control
- Assist in evacuation within capabilities and as requested
- Security of evacuated areas and evacuation centers
- Search and Rescue operations

**Transportation Agencies and Public Works:**

- Clearing debris from roads as necessary to maintain evacuation routes
- Emergency traffic control and advanced warning notification
- Assist in evacuation within capabilities and as requested
- Traffic control along established routes
- Debris removal
- Traffic control equipment along established routes

**Transit Agencies:**

- Provide buses for temporary shelter from the elements as necessary.
- Emergency transportation for those in need (coordinated by law enforcement)

**Public Health and Valley View Hospital**

- Emergency medical care and coordination
- Medical support at all shelter locations
- Health advisories
- Identification of secondary health facilities and transportation

**The City of Glenwood Springs and Garfield County PIO Group:**

- Assist in the dissemination of the warning
- Assist with all emergency messaging as directed by Incident/Unified Command
- Assist with providing information at evacuation centers
- Monitor social media

**Local Schools:**

- Evacuation or shelter-in-place procedures
- Provide transportation services as needed if available
- Provide facilities for evacuees or emergency responders

**Volunteer agencies, i.e., The Salvation Army/Red Cross**

- Support shelters with welfare services (staff, food, drink, clothing)
- Maintain MOUs with necessary agencies
- Provides staffing and food to evacuees at evacuation centers and shelters

**Evacuation Center Manager:**

- Receive assignment from Incident Command
- Provide check-in and out to account for those evacuated
- Provide situation information to evacuees

## 5 ALL HAZARD RESPONSE, ASSESSMENT, AND CONTROL

### 5.1 ID Potential Significant Hazard and Public Safety Emergencies

Hazards that affect the City of Glenwood Springs and the surrounding area vary by type, size, time of day, and day of week. They can be natural (Acts of Nature), Technological (accidents or failure of systems or structures), or Human-caused (intentional or unintentional). The hazard may or may not affect or impact the entire community or affect portions of the community. Based on a combination of experience, forecasting, planning, and the type of emergency/event, Incident Command or Unified Command will make an assessment and determine how it may or may not affect the community.

### 5.2 Notification, Response, and Arrival to those Emergencies

Each responding agency is notified of an incident by one of three different communications centers or Traffic Management Centers (TMC). Those communication centers are the Garfield County Emergency Communication Authority (GCECA), the Montrose Regional Communication Center (MRCC), and the Hanging Lake Tunnel TMC (CDOT), see Table 4. Based on the initial information, agencies determine a response plan, and upon arrival at the scene an Incident Command (IC) is established.

**Table 4. Communication and Traffic Management Centers**

| Communication / Traffic Management Center         | Contact numbers             | Primary Service Agencies                                                                                                                     |
|---------------------------------------------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Garfield County Emergency Communication Authority | Non-Emergent:<br>[REDACTED] | Glenwood Spring Fire Department<br>Glenwood Springs Police Department<br>Garfield County Sheriff's Office<br>Garfield County Road and Bridge |
| Montrose Regional Communication Center - CSP      | Non-Emergent:<br>[REDACTED] | Colorado State Patrol<br>Colorado State Patrol Hazardous Materials Unit                                                                      |
| Hanging Lake Tunnel TMC - CDOT                    | Non-Emergent:<br>[REDACTED] | CDOT - Maintenance<br>CDOT - Hanging Lake Tunnel Operations                                                                                  |

### 5.3 Direction, Control, Coordination

Based on the incident assessment, the IC/UC will determine and implement life and property-saving measures. This assessment will include a scene size up which includes the type of scene, scene boundaries, scene and site security, communication protocol, traffic impacts and mitigation, closure points or areas, evacuation routes, alternate routes, public messaging, and additional resource requirements/requests.

For each incident, the IC/UC should have a general understanding of the community impacts, set priorities and incident objectives, and coordinate command and activities. Some of these priorities may include estimating a timeframe for clearing a scene, clearing the road, fixing infrastructure, restoring power, restoring traffic flow, or placing the situation back to normal levels of operation. The timeframe can be measured in minutes, hours, days, weeks, or months.

## 5.4 Determine Immediate Actions

Each immediate action fills a specific operational need based on critical time factors and the availability of safe travel routes to destination points. Depending on the size, type, and complexity of the emergency, all immediate actions could be implemented on the same incident. Types of immediate actions include:

- Interoperable communication and coordination
- Traffic management
  - Road closures
  - Staging areas
  - Vehicular storage and staging areas
  - Traffic control points and key traffic management locations
  - Alternate routes
  - Additional resources are needed and requested
  - Critical traffic management locations
  - Traffic queue monitoring and mitigation
- Public messaging - community alert notifications
- Shelter-in-place
- Pre-Evacuation warning
- Evacuation order

Based on the assessment, the IC/UC will begin mitigation efforts to help control the incident and the surrounding impacted area.

## 6 INTEROPERABLE COMMUNICATION AND COORDINATION

Effective communication is critical to the success of incident response efforts. To facilitate clear communication among responding agencies and their respective communication centers, use plain language. Interoperability of communication technology and equipment is essential to responders during emergencies and natural disasters. Agencies/departments in this area operate primarily on either the Digital Trunk Radio (DTR) or Very High Frequency (VHF) system. Cell phone communication is supplemental to radio communications in the case of operational issues, radio tower overload, or poor coverage areas. When interoperable radio communications are needed, the IC/UC will identify a designated command channel for the incident, and their communication center will verify if that particular channel is available and acknowledge the channel as Command. A communication center may also assign a command channel if requested by the IC/UC. If additional interoperable radio channels are needed for other functions, the IC/UC will assign those radio channels. If the incident involves traffic outside the City Limits of Glenwood Springs, refer to the Interoperable Communication Plan, **Table 5**. If the event is within the City Limits of Glenwood Springs involving solely city resources refer to the Glenwood Springs Operable Communication Plan, **Table 6**.

## INTEROPERABLE COMMUNICATIONS PLAN

## OPERABLE COMMUNICATIONS PLAN

| OPERABLE COMMUNICATIONS PLAN |                          |            |                                        |                                        |
|------------------------------|--------------------------|------------|----------------------------------------|----------------------------------------|
| Radio Channel Utilization    |                          |            |                                        |                                        |
| Channel                      | Function                 | Type       | Assignment                             | Remarks                                |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]                             | [REDACTED]<br>[REDACTED]               |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]<br>[REDACTED] |
| [REDACTED]<br>[REDACTED]     | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]<br>[REDACTED] |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]<br>[REDACTED]<br>[REDACTED] | [REDACTED]<br>[REDACTED]               |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]                             |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]                             |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]<br>[REDACTED] |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]<br>[REDACTED] |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]               |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]                             |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]               |
| [REDACTED]                   | [REDACTED]               | [REDACTED] | [REDACTED]<br>[REDACTED]               | [REDACTED]<br>[REDACTED]               |
| [REDACTED]                   | [REDACTED]<br>[REDACTED] | [REDACTED] | [REDACTED]<br>[REDACTED]<br>[REDACTED] | [REDACTED]                             |

## 6.1 Cache Radio Request and Deployment

Garfield County Emergency Management has cache radios that can be deployed and assigned to other responders as needed. The cache radios are pre-programmed with the appropriate channels, have encryption capability, and are located in Rifle. The process for cache radio deployment is as follows:

- The IC will request cache radio(s) through the Garfield County Emergency Communications Authority (GCECA)
- The GCECA will contact Garfield County Emergency Management / Operations in this order:
  1. Emergency Manager - Commander C. Bornholdt
  2. Emergency Operations - Sergeant L. Burris
  3. Emergency Operations - Sergeant C. Whiting

If the communication center is busy, the IC may contact Garfield County Emergency Operations directly. Each radio requested will be transported by Emergency Operations resources and deployed promptly.

## 7 TRAFFIC MANAGEMENT

The management of traffic is critical for the movement and mobility of all roadway users. Traffic gridlock due to an emergency may significantly affect emergency response capability for all responders. Special consideration of traffic management needs to be given during the morning and evening rush hours, Monday - Friday. Also, to be considered, population increases due to tourism for seasonal events and activities. Any traffic hazard or obstruction will be removed as soon as possible, and traffic crashes should be relocated off the main travel routes to prevent traffic queues of excessive lengths. If the hazard or crash cannot be removed timely, the IC should utilize alternate routes with dedicated traffic control at critical intersections to expedite traffic flow.

### 7.1 Road Closures

Road closures for I-70 through Glenwood Canyon, South Canyon, and SH 82 will be handled per the Garfield County Traffic Incident Management Plan. Strategies to mitigate traffic congestion in Glenwood Springs consist of stage closures on I-70 at Dotsero, Canyon Creek, and West Rifle as well as on SH 82 at Garfield County Road (GCR) 154 - MP 5, SH 82 at GCR 114, and SH 82 at SH 133.

The IC will coordinate these closure points with necessary personnel from the state, county, and city, and later release of traffic at these locations in stages.

#### 7.1.1 Traffic Control Points and Key Traffic Management Locations

Due to the nature of the traffic patterns and primary commuting routes in and around Glenwood Springs, **Table 7** illustrates the key traffic control points and the resources needed to facilitate the movement of traffic. An interactive map link is included in **Table 7** for more detail. During an I-70 road closure that is anticipated to last longer than 2 hours, the IC should notify the Roaring Fork Transportation Authority (RFTA). RFTA will then make

necessary adjustments to travel routes and times. RFTA buses can also request buses traveling to Glenwood Springs from SH 82 be allowed to proceed past the SH 82 closure point.

**Table 7. [Key Traffic Control Locations](#)**

| Intersection | Primary Jurisdiction  | # of responders | T/C Devices | Notes |
|--------------|-----------------------|-----------------|-------------|-------|
|              | CDOT, CSP, GCSO       |                 |             |       |
|              | CDOT, CSP, GCSO       |                 |             |       |
|              | CDOT, CSP, GSPD       |                 |             |       |
|              | CDOT, CSP, GSPD, GSPW |                 |             |       |
|              | CDOT, CSP, GSPD, GSPW |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | CDOT, CSP, GSPD       |                 |             |       |
|              | CDOT, CSP, GSPD       |                 |             |       |
|              | CDOT, CSP, GSPD, GSPW |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | GSPD, GSPW            |                 |             |       |
|              | CDOT, CSP, GSPD, GSPW |                 |             |       |
|              | GSPD, GCR&B           |                 |             |       |
|              | CDOT, CSP, GCSO       |                 |             |       |

### 7.1.2 Traffic Queue Monitoring and Mitigation

Traffic queues develop quickly following a traffic incident. They need to be monitored and mitigated to reduce secondary crashes and incidences that require additional emergency response. Appropriate advanced warning devices upstream of the incident need to be deployed as soon as possible to provide traveler information. Continued monitoring of traffic queues is necessary and relevant information must be communicated to the IC promptly.

Grand Avenue (SH 82) and Midland Avenue are primary traffic routes through Glenwood Springs and once these routes become congested, mitigation efforts should be determined by the IC. Mitigation efforts will consist of alternate routes, staged closures upstream, public messaging, and additional traffic control units to manage critical intersections.

### 7.1.3 Glenwood Springs Traffic Management Resources

Glenwood Springs Public Works has a variety of traffic management/control devices and equipment. Traffic Control devices include barricades, portable VMSs, cones, and barrels. Additional equipment that can be used to mitigate traffic are skid steers, front-end loaders, personnel equipment, etc. Each of these devices and tools are stored at the fleet shop (2222 Devereux Road) or the TCD/E south yard (810 GCR 116). If additional support is needed, Public Works maintains a vendor list (A1 Traffic Control, Alexander United, Traffic Control Specialists) that can be called in to assist.

Mobilization of any requested support may be affected by traffic volumes and road closures. The IC/UC will make a request, through their communication center, to Public Works to provide traffic control personnel and equipment at the desired intersection/streets/roadways to help manage traffic. A Public Works lead will communicate to the IC/UC based on the communication plan and utilize their assigned VHF radios for internal communications. The Public Works lead will provide an estimated time of arrival (ETA) and expedite resources to the desired location. When Public Works resources arrive at the requested location, or if they are delayed due to unforeseen conditions, they will notify the IC/UC. Once at the requested location, they will remain there until relieved by the IC/UC.

Each agency should make reasonable attempts to assure all traffic control personnel wear high-visibility safety apparel (ANSI vest) that meets the requirements of the Manual on Uniform Traffic Control Devices (MUTCD). [2009 MUTCD with Revisions 1, 2, and 3 incorporated, dated June 2022 \(PDF\) - FHWA MUTCD \(dot.gov\)](#) The MUTCD also describes the exemptions for law enforcement, firefighters, and other emergency responders.

### 7.1.4 Additional Resource Requests

All additional resource requests will be determined by the IC/UC. Additional resources include but are not limited to personnel, traffic control devices/barricades, radios, vehicles, specialized personnel, and communication tools. Resource requests will be passed on to the communication center from the requesting agency. All acquired resources will be appropriately checked in per the pre-identified agreements and/or through the IC/UC.

## 7.2 Alternate Routes

The control of the roadway(s) is the responsibility of the law enforcement agency and the transportation department having jurisdictional authority. Traffic control operations and all

decisions on road closures, alternate routes, or other traffic control functions should be communicated from the IC/UC.

When the primary alternate route is restricted or undesirable, a different alternate route may be initiated by the IC/UC. Before an alternate route plan is initiated, the IC/UC should verify that neither construction activities nor maintenance issues are present along the route. Garfield County Road & Bridge, Glenwood Springs Public Works, and CDOT should be contacted to confirm the suitability of all alternate routes. The primary alternate routes in this area are:

- I-70
- US 6
- SH 82
- Midland Avenue
- GCR 154

### 7.3 CDOT VMS and Camera Locations

For CDOT-controlled Variable Message Signs (VMS), CDOT will determine and implement the correct messages to be displayed during incidents. CDOT, the City of Glenwood Spring Public Works, and Garfield County Road and Bridge may use portable VMSs to warn drivers of the situation and provide information to motorists such as road closed, local traffic only, and alternate routes. CDOT controlled cameras are also a useful tool to monitor traffic. These are public cameras and can be monitored by the IC/UC, other communication centers, and an EOC. Useful VMS and camera locations are in **Table 8**.

**Table 8. VMS and Camera Locations**

| VARIABLE MESSAGE SIGN | MILEPOST | CDOT CAMERAS     | MILEPOST |
|-----------------------|----------|------------------|----------|
| <b>Interstate 70</b>  |          |                  |          |
|                       |          | Camera Eastbound | 86       |
| VMS Westbound         | 51       | Camera Eastbound | 96       |
| VMS Eastbound         | 86       | Camera Westbound | 108      |
| VMS Westbound         | 92       | Camera Eastbound | 115.95   |
| VMS Eastbound         | 105      | Camera Eastbound | 116.20   |
| VMS Westbound         | 109      | Camera Eastbound | 116.60   |
| VMS Eastbound         | 115      | Camera Eastbound | 116.85   |
| VMS Westbound         | 140      | Camera Westbound | 117      |
| VMS Westbound         | 157      | Camera Eastbound | 118.25   |
|                       |          | Camera Eastbound | 118.00   |
|                       |          | Camera Eastbound | 118.70   |
|                       |          | Camera Westbound | 120      |
|                       |          | Camera Westbound | 122      |
|                       |          | Camera Eastbound | 123      |
| <b>SH 82</b>          |          |                  |          |
| VMS Westbound         | 12       | Camera Westbound | 12       |
| VMS Eastbound         | 11       | Camera Eastbound | 21       |
| VMS Westbound         | 37       | Camera Eastbound | 23       |
|                       |          | Camera Eastbound | 26       |
|                       |          | Camera Westbound | 29       |
|                       |          | Camera Eastbound | 35       |

## 7.4 Event Termination

Once all response and mitigation activities have ended and the situation has returned to normal operating conditions with no threat to life and property, the incident will be terminated by the IC/UC. For a traffic incident or an incident that restricts the movement of traffic, the event is not complete until the hazard is removed or has ended, and the roadway(s) is clear of the hazards and emergency responders.

Once the incident is clear and the IC is ready to initiate normal traffic flow, the IC needs to prepare a plan and communicate that plan to all those participating including all traffic control point personnel. The IC will inform the GCECA and then properly execute the plan. If a command channel has been assigned to the incident, the IC will properly terminate the channel so all responding assets are aware and can return to their normal assigned operational channel. Any available units should continue to monitor the area as needed.

## 8 STAGING AREAS

The IC/UC should consider the use of staging areas for responding agencies or personnel who are assisting. The establishment of a staging area is situation-dependent and will vary from incident to incident. For incidences on I-70, on and off-ramps can be used. Drop zones can also be utilized for damaged vehicles involved in crashes. Drop zone locations consist of the I-70 on and off ramps, parking lots, and roadways adjacent to the affected area.

Guidelines to be considered when setting up staging areas:

- The IC/UC will establish a staging area near the incident or an adjacent roadway, on the roadway shoulder, or parking lot.
- The IC/UC will notify the communication center of its exact location and how to access the area.
- If necessary, a Staging Area Manager will be identified.
- Resources will remain at the staging area until assigned.

## 9 VEHICLE STORAGE LOCATIONS

### 9.1 Passenger Vehicle Storage Locations

During events that require road closures, vehicle storage areas become necessary to reduce overall traffic congestion, prohibit vehicles from parking in the travel lanes, and provide a safe location for all motorists. Access to food, water, and restrooms should also be considered if possible. The need to implement a vehicle storage parking plan will depend on the incident or closure type, expected duration, weather conditions, and road conditions. To help facilitate traffic in and out of the passenger vehicle storage areas, local law enforcement should consider assigning personnel to monitor the parking area and provide information to those using the storage areas. All passenger vehicle locations being utilized should be coordinated and communicated to the IC/UC as well as frequent updates on the status of each storage location. See **APPENDIX D: VEHICLE STORAGE AREAS** for all vehicle storage areas.

## 9.2 Commercial Motor Vehicle Storage Locations

Commercial Motor Vehicle (CMV) storage areas should be limited to those pre-identified due to the amount of space needed and the maneuverability of CMVs. The Garfield County TIMP has designated CMV parking plans, and they include designated parking along US 6 and beyond the closure point along I-70, Exit 114, or Exit 116. CDOT must be contacted to review, coordinate, and execute the use of any of the CMV parking areas along a state or federal highway. In addition to the Garfield County TIMP CMV storage locations, an additional closure point on WB I-70 at MP 118, just before the No Name tunnel entrance, can be utilized. As soon as this location is full, CMVs will be directed to exit WB I-70 at Exit 119, proceed EB on I-70, and park in the Dotsero Emergency Parking lot. All CMV storage locations being utilized should be coordinated and communicated to the IC/UC as well as frequent updates on the status of each storage location. See **APPENDIX D: VEHICLE STORAGE AREAS** for vehicle storage areas.

Commercial motor vehicle parking area guidance:

- When a closure is implemented, CMVs will immediately be informed via VMS messages of the location of the closure point.
- When needed, appropriate traffic control resources will be notified to respond.
- When parking CMVs past the staged closure location, law enforcement will set the placement of the first truck, and then send the rest to line up behind them. This creates a safe zone for them without creating further congestion on local municipality roadways. They must proceed to the right shoulder of the road in an orderly manner and await directions. CMV drivers will be informed not to leave until they get authorization from a traffic control official to proceed.

## 10 PUBLIC INFORMATION AND MESSAGING

Coordination with public and media information will be managed by the IC/UC. The Public Information Officer (PIO) from the responsible agency, if one is designated for the incident, should release information only with prior approval from the IC/UC or the Joint Information Center (JIC). This lead PIO will be the only direct media contact and will coordinate with responding agencies' media personnel to provide timely and consistent information to the public. The lead PIO may appoint a PIO from another agency to answer media questions in coordination with the lead agency's responsibility (crash/police activity - Law Enforcement, Fire - Fire Department, Road & Weather - CDOT).

### 10.1 Community Alert Notifications

Public notification distribution platforms include text, call, subscriber-based alerts, television, radio, social media, website, print, and variable messaging signs. A combination of some or all methods may be used depending on the nature of the event. **Figure 6** is a hierarchy chart for public messaging. Messaging can consist of descriptive content about the hazardous situation, evacuation notices, road closures, law enforcement activity, travel routes, traffic conditions, or prescriptive recommendations that indicate where to go and which route to take. They should also include appropriate translated messages (i.e., Spanish) to engage the entire community.

## Public Notification Methods

- Everbridge
- Integrated Public Alert & Warning System (IPAWS)
- Incident/roadway user messaging - GCECA (Text 77888)
- Government website
- Public radio
- Social media (Facebook, Instagram, Snapchat)
- Internal private business, schools, and tourist locations messaging systems
- CDOT messaging platforms - 511 system, VMS, real-time alerts through text/email messages, COTrip.org, and Facebook.

**Figure 6. Public Notification Flowchart**

Critical information will be disseminated by the various alert and warning systems at the request of the IC/UC through the GCECA. The GCECA will use Everbridge and IPAWS to send out information related to the incident. The IC/UC may request the GCECA issue an Everbridge or IPAWS notification, but the message must be approved by the GCECA authority prior to being disseminated. Pre-built templates should be considered for efficiency. See the information below for Everbridge and IPAWS Messaging.

Everbridge is used to communicate local emergency messages to relay critical information and instructions such as evacuation notices, shelter-in-place, law enforcement activity, etc.

Things to consider before requesting an Everbridge message:

- Time of day
- Population in the desired area
- Level of urgency
- Is a text sufficient?

Keep in mind that heavily populated areas may overload the system causing failures, so messages should be brief (120 characters).

For active events, the GCECA can create an “Event Code” for information dissemination. These codes are for use during major events where non-Garfield County residents need a way to get information or when residents may need updates on an ongoing major event such as a wildfire. As an example, GARCOROADS has already been created for roadway events (i.e., road closures) and the GCECA can run up to four active “Event Codes” simultaneously.

ReachWell is an Application (APP) that can be downloaded that will translate messages in over 100+ languages. After the APP is downloaded to your mobile device, add “GARCO911: Garfield County 911” as a user group to get messages translated into a selected language.

IPAWS will reach a significantly greater population due to the difference in method of delivery. The two primary methods of delivery are Wireless Emergency Alerts and the Emergency Alert System (Audio & Text)

Things to consider before requesting an IPAWS message:

- Does the hazardous situation require the community to take action?
- Does the hazardous situation pose a threat to life or property?
- Is there a high degree of probability a hazardous situation will occur?
- Do other means of information dissemination ensure rapid delivery of urgent information?

## 11 EVACUATION

The identification of a threat or hazard that could lead to an evacuation or a shelter-in-place order is the first phase in any evacuation procedure. Once a threat is identified, an evacuation order moves the most vulnerable, threatened population away from a potential area of impact. A shelter-in-place order shelters identified populations where they are, when and where conditions support the order.

### 11.1 Evacuation Decisions

Ordering a shelter-in-place, pre-evacuation warning, or evacuation order is the responsibility of the local authority having jurisdiction. Evacuation decisions should not be delayed if the time it would take to obtain the proper approvals would endanger lives. The IC/UC should monitor all incidents that may result in evacuations and activate the Emergency Operations Center (EOC) if it is anticipated additional support may be needed. The IC/UC will be the one(s) with the necessary situational awareness to recommend either an evacuation or shelter

order as the preferred method of protecting lives before, during, or after disasters or emergencies. This will vary depending on the hazard or the threat to public safety.

Primary life safety evacuation information will be disseminated by the various alert and warning systems at the request of the IC/UC through the GCECA. It is the responsibility of the IC/UC to notify the GCECA of any evacuation orders and provide geographic boundaries (Evacuation Zones), evacuation instructions, and any evacuation routes.

For slow-developing or pre-planned situations, evacuations may be planned and coordinated ahead of time.

Personnel (or their designee) who can order an evacuation in the City of Glenwood Springs and Garfield County are independent of one another and include the following:

- City of Glenwood Springs City Manager
- Garfield County Sheriff
- Glenwood Springs Fire Chief
- Glenwood Springs Chief of Police
- Garfield County Emergency Manager
- Governor of the State of Colorado

If the threat or incident exceeds the local response capabilities, the Garfield Emergency Manager be notified to assist with coordination of the efforts and provide supplemental assistance.

## 11.2 Pre-Evacuation Warning

A pre-evacuation warning is an alert to community members in a defined area of a potential threat to life and property in an emergency incident. Pre-evacuation warnings may require transportation and traffic control resources in addition to those utilized during normal conditions.

## 11.3 Shelter-in-Place

Depending on the incident type and location, an evacuation may not be required or recommended. A shelter-in-place order is appropriate when conditions require that individuals seek protection in their homes, places of employment, or other locations when a hazard or threat is imminent or occurring. People may not have enough time to evacuate from the hazard or threat and can shelter-in-place as a safer alternative. Additionally, this can minimize traffic impacts and help keep roads clear for those in the most immediate danger. Individuals without access and functional needs should be a priority for restoration of services and safety checks as they may be at greater risk throughout a prolonged shelter-in-place order. Pre-incident and post-incident shelter-in-place orders may occur simultaneously with life-saving response operations.

Factors to consider include:

- When sheltering in place, people generally feel safer, are better prepared, and recover faster from incidents.
- The consequences of putting people on the road during an event often far outweigh the risks of ordering them to shelter in place.
- Shelter-in-place orders should be communicated through the normal channels as in any disaster event. Incident PIOs may request assistance from the EOC to facilitate this.

- The IC/UC may assist with the dissemination of information to the public in accordance with the public information section.
- When sheltering in place is not enough to ensure the safety of residents and the public, evacuation orders may be issued. It is the responsibility of the IC/UC or EOC to determine the best course of action depending on the scope of the incident, type, time, and location.

## 11.4 Evacuation

The goal of an evacuation is to move as few people as needed the shortest distance to safety. An evacuation may require transportation and traffic control resources in addition to those utilized during normal conditions.

The decision to evacuate will be based on maximizing the preservation of life first, then protecting property, the environment, and the economy. Several factors will need to be considered including:

- The capacity to safely move all population groups.
- The transportation system and roadway conditions.
- The expected event duration.
- The weather forecast.
- The rate of spread (wildfire), level of flooding, and plume size (hazardous material).
- Review of the current and anticipated hazard behavior, such as a fire or flood.

Evacuations are recommended when one or more of the following conditions are met:

- Citizen safety is under continuing threat.
- First-response agencies cannot adequately address the needs of the residents while also responding to the incident.
- Public health concerns are significant and not sufficiently mitigated by shelter-in-place measures.
- Infrastructure cannot support residents, i.e., no food, clean water, or power for an extended period of time.
- The risks of sheltering in place outweigh the risks of evacuating.

## 11.5 Public Messaging and Information

Coordination with public and media information will be managed by the IC/UC as described in 10. Public messaging and information should be accomplished through the use of clear, consistent, and accessible methods. This will effectively relay information regarding any threat or hazard, as well as the actions being taken, and the assistance being made available for all communities.

## 11.6 Evacuation Zones

Evacuation zones promote phased, zone-based evacuation, which allows authorities to prioritize evacuation orders to the most vulnerable zones first and limit the need to evacuate large areas not under threat.

Pre-established evacuation zones help:

- Jurisdictions to understand transportation network capacity, critical transportation and resource needs, and shelter demand.

- Planners to develop planning factors and assumptions to determine goals and objectives.
- Community members to understand protective actions to take during an emergency.
- Shelters to limit traffic congestion and select locations suitable for the evacuated population.

Evacuation zones have been identified for the City of Glenwood Springs and the geographic boundaries of the GSFD. These zones were established with these considerations:

- Natural topography
- Major roadways and identified evacuation routes
- Existing neighborhoods
- US census data
- City of Glenwood Springs zone map

Each zone has been identified by a sequential number (GWS 7001). **Figure 7** shows the overall evacuation zone map with a link to provide more detail.

**Figure 7. Evacuation Zones**  
[Glenwood Springs Evacuation Zones](#)

## 11.7 Evacuation Routes

Within the City of Glenwood Springs and the geographic boundaries of the GSFD, several roads and highways have been identified as evacuation routes. All the evacuation routes are consistent with the alternate routes to manage traffic. Each evacuation route leads to I-70, US 6, or SH 82 and in many cases, serve as the only roadway from a specific area within the geographical boundaries of the GSFD. Although each evacuation route has been pre-determined, other routes may be developed as needed. **Table 9** and **Figure 8** show evacuation zones and evacuation routes.

The pre-identified evacuation routes are:

- US 6
- Donegan Road (GCR 130)
- Storm Creek Road - I-70 Access Line Break
- Mel Ray Road
- Midland Avenue
- West 1<sup>st</sup> Street - I-70 Access Line Break
- East 6<sup>th</sup> Street
- Grand Avenue, South Glenn Ave., (SH 82)
- 8<sup>th</sup> Street
- 27<sup>th</sup> Street
- 3-Mile Road (GCR 127)
- 4-Mile Road (GCR 117)
- Dry Park Road (GCR 125)

**Table 9. Evacuation Zones and Evacuation Routes They Serve**

| Evacuation Zone(s) | Primary Evacuation Route                                                 | Alternate Evacuation Route                                                | Alternate Evacuation Route                          |
|--------------------|--------------------------------------------------------------------------|---------------------------------------------------------------------------|-----------------------------------------------------|
| GWS 7001-7006      | WB US 6 to WB or EB I-70                                                 | WB US 6 towards New Castle                                                |                                                     |
| GWS 7007-7012      | Donegan Rd > Storm King Rd Access Point/Mel Ray Rd > US 6 > I-70         | Donegan Rd > US 6 > West 1st Access Point > I-70                          | Donegan Rd > US 6 > Grand Ave > SH 82               |
| GWS 7013-7016      | US 6 > West 1st Access Point > I-70                                      | US 6 > I-70 Exit 116                                                      | US 6 > Grand Ave. > SH 82                           |
| GWS 7017-7021      | Midland Ave. > I-70 Exit 114                                             | Midland Ave. > 8th St. > Grand Ave. > I-70 Exit 116                       | Midland Ave. > 8th St. > Grand Ave. > SH 82         |
| GWS 7022-7029      | Midland Ave. > 8th St. > Grand Ave. > I-70 Exit 116                      | Midland Ave. > 27th St. > S. Glen Ave. > SH 82/I-70                       | Midland Ave. > 8th St. > Grand Ave. > I-70 Exit 114 |
| GWS 7030-7044      | Grand Ave > 6 <sup>th</sup> St > I-70 Exit 116                           | Grand Ave. > 8th St. > Midland Ave. > I-70 Exit 114                       | Grand Ave. > SH 82                                  |
| GWS 7045-7048      | GCG 154 > SH 82                                                          |                                                                           |                                                     |
| GWS 7049-7061      | GCR 117 (4-Mile Rd) > Midland Ave. > 27th St > S. Glen Ave. > SH 82/I-70 | Midland Ave. > 8th St. > Grand Ave. > 6 <sup>th</sup> St. > I-70 Exit 116 | GCR 117 (4-Mile Rd) > GCR 125 (Dry Park Rd)         |

**Figure 8. Evacuation Routes**  
Glenwood Springs Evacuation Routes

Management of the evacuation routes rests primarily with the law enforcement and transportation agencies having jurisdictional authority. During a mass evacuation event, decisions on traffic flow and evacuation routes are determined by the IC/UC in conjunction with the law enforcement agency having jurisdiction. During an emergency, clearing the roads for emergency response and movement of resources becomes critical to operations. The City of Glenwood Springs Public Works, Garfield County Road & Bridge, and the Colorado Department of Transportation shall coordinate emergent road clearings and maintenance.

An overall guide which documents all the evacuation routes and zones, areas of refuge/safe zones, critical facilities, critical intersections, evacuation scenarios, and special considerations, has been developed. See **APPENDIX A: Evacuation Guide**.

### 11.8 I-70 Access Line Breaks

The Federal Highway Administration (FHWA) and CDOT have the authority to approve each access line break for emergency purposes only. Each access line break will be equipped with a locked gate controlled by a secured key/code. An agreement has been developed between CDOT and local jurisdictions concerning the operation and maintenance of the gates and related standard operating procedures.

Each break in the control of access to the Interstate System right-of-way is considered to be an access point. Each entrance to I-70, is considered to be an access point and controlled by a “locked gate”. **Table 10** indicates those agencies permitted to open each access gate and the gate lock key holders.

**Table 10. A-Line Break Gate Operations & Key Holders**

| Permitted to Open Access Line Break Gates | Permitted Key Holders                                                   |
|-------------------------------------------|-------------------------------------------------------------------------|
| Colorado Department of Transportation     | LTC Ops Hanging Lake Tunnel Operations<br>Resident and Program Engineer |
| Glenwood Springs Fire Department          | Glenwood Springs Fire Chief                                             |
| Glenwood Springs Police Department        | Police Chief and Lieutenants                                            |
| Glenwood Springs Public Works             | Glenwood Springs Public Works Director                                  |
| Garfield County Sheriff's Office          | Garfield County Emergency Manager                                       |
| Colorado State Patrol                     | Colorado State Patrol Captain                                           |

Two access line breaks along I-70 in Glenwood Springs are under design and are anticipated to be completed in 2023/2024; they are depicted in **Figure 9**. They provide a direct route onto I-70 from Storm King Road and West 1<sup>st</sup> Street to support saving lives and property. When necessary, the IC/UC will utilize the I-70 access line breaks from Storm King Road or West 1<sup>st</sup> Street for evacuation/emergency traffic management purposes.

**Figure 9. Access Line Break Locations along I-70**

#### 11.8.1 General guidelines for the use of I-70 Access Line Breaks

- The agreement between CDOT and local jurisdictions concerning the operation and maintenance of the gates designates the IC as one of the following:
  - Glenwood Springs Police Chief
  - Glenwood Springs Fire Chief
  - Garfield County Emergency Manager
  - Garfield County Sheriff
  - Other personnel as designated by the four listed above.
- The IC will determine when an evacuation will be initiated and coordinate with CDOT and the City of Glenwood Springs official(s).
- The IC will brief CDOT on the emergency situation and request traffic control assistance from CDOT and law enforcement.
- CDOT will make all necessary internal and public notifications and provide resources to close I-70 near the access line's access point with appropriate traffic control personnel and devices.
- Law enforcement will be present to provide traffic control support at each access line's access point.
- CDOT and law enforcement will take a position on I-70 at the access point as well as any appropriate ancillary roadways and authorized personnel will open the locked gate to allow traffic flow onto I-70.
- CDOT and law enforcement will appropriately direct traffic onto I-70 from Storm King Road/US 6 or West 1<sup>st</sup> Street.
- Traffic control channeling devices should be used, as needed, per CDOT's direction and plans.
- Once traffic congestion is mitigated and the emergency evacuation access point is no longer needed, the IC will notify CDOT and all necessary personnel.
- CDOT will acknowledge the request and take the necessary steps to securely close the access point, lock the gate, and return traffic flow to normal routes.

## 11.9 Counterflow Lane Reversal

Counterflow reverses the normal flow of traffic (typically one or more lanes in the opposing direction) to increase the flow of outbound vehicle traffic during an evacuation. Counterflow operations may cause issues at jurisdictional borders if the transition from counterflow lanes to normal lanes is uncoordinated, which can significantly slow the evacuation. Properly executed counterflow requires significant resources and time, and it is most applicable when an expedited large-scale evacuation is necessary. Generally, coordinating counterflow takes place at the Incident Command Post (ICP) or the EOC and requires considerable planning to avoid any interference with response operations.

During an emergency, clearing the roads for emergency response, evacuation, and movement of resources becomes critical to response and recovery operations. Counterflow operations may interfere with this important function. The City of Glenwood Springs Public Works, the Garfield County Road and Bridge Department, and the Colorado Department of Transportation shall coordinate emergent road debris clearing and maintenance within their jurisdiction.

## 11.10 Animal Evacuation and Sheltering Locations

Evacuation of pets and large animals is primarily the responsibility of the pet/animal owners. As soon as the need is identified, the IC/UC should request support from the Garfield County Fairgrounds to support evacuating housing animals. The GCECA should forward this request to the appropriate resource for approval and acceptance. If necessary, the City of Glenwood Springs and Garfield County Animal Control can assist in the evacuation of animals, small and large, from a hazardous zone.

Assumptions regarding animal evacuation and sheltering:

- Spontaneous volunteers may arise during evacuations, specifically to assist in the evacuation of large animals. The IC/UC should be hesitant to officially deploy these volunteers into active hazardous zones as private citizens.
- Owners are encouraged to have evacuation plans in place and utilize available resources when evacuating large animals. Any pet evacuation plans should also include any food and medication needed for the duration of the evacuation.
- Recovery of animals “let loose or lost” during an evacuation, either by private citizens or response agencies, is primarily the responsibility of the animal owners. Service animals will evacuate with their owners as part of the general population.

## 11.11 Evacuation Check-in / Check-out Procedures

Check-in and out operations will be conducted by the law enforcement agency having jurisdiction or their designee. Required check-in information will consist of the date checked in, evacuee’s name, address evacuated from, contact phone number(s), special needs, check-out date, and destination. Evacuees may be assigned to shelters based on the area of their residence. An evacuation check-in / check-out checklist is provided in **APPENDIX I: EVACUATION CHECK IN CHECK OUT PROCEDURES**.

## 11.12 Evacuee Tracking and Accountability

Accountability of evacuated persons focuses on the timely and accurate accounting of evacuees. Clear communication, activation of appropriate and sufficient support resources, and eventual safe re-entry of the affected public to an area impacted by a natural or manmade disaster is critical. Through the use of a pre-established evacuee check-in and out

system, the City of Glenwood Springs expects to ease the process of identity verification and accountability of evacuated residents.

Citizens who self-evacuate or evacuate by public transportation may be asked to indicate they have already vacated their residence by displaying a door tag or sign indicating the home is vacant. These self-evacuated signs should be visible, conspicuous, and in the front (street-side) of their home.

### 11.13 Areas of Refuge, Safe Zones (Large Groups of People)

Areas of refuge are primarily for displaced populations. These locations may temporarily and safely hold people for short-term relief during a wildfire or other emergency when evacuation routes have been compromised and may not be safe or possible. Affected populations should go to a preplanned safe zone, as directed by IC/UC, such as a large field, parking lot, athletic field, park, open greenspace or previously burned areas with no flammable overstory/canopy that is clear of all hazards.

Areas of refuge have been identified; however, they are not limited to these locations. A list or pre-determined areas are included in **APPENDIX E: AREAS OF REFUGE / SAFE ZONES**. They should be staffed and monitored by emergency personnel, provide timely and accurate information to the population, identify transportation needs, as well as provide needed supplies or resources.

### 11.14 Evacuation Area Security

Following an evacuation, law enforcement agencies will coordinate security for the evacuated area. A combination of resources from the Glenwood Springs Police Department (GSPD), Garfield County Sheriff's Office (GCSO), the Colorado State Patrol (CSP), and other law enforcement resources will provide security. Coordination of these efforts should be managed by the appropriate agency having jurisdiction or the IC/UC.

Other security considerations are:

- Officers, deputies, and troopers should be briefed on evacuation plans, notices, and their responsibilities.
- Any law enforcement officer or personnel responding from outside agencies are under the operational control of the IC or EOC while conducting operations for the incident.
- Access control points (ACP) will be established to ensure only properly identified and credentialed personnel have access to the evacuated area.
- Patrols of the evacuated areas, when appropriate, will be coordinated by the proper authority having jurisdiction.

The IC/UC or the EOC will coordinate movement of evacuees back into a community once the threat or hazard dissipates and the event causing the evacuation ends. Re-entry will begin once first responders have stabilized the area to a point where residents can return, and this will initiate the recovery phase of the hazard.

### 11.15 Re-entry and Recovery

Every effort will be made to allow evacuees to return to their homes and businesses. Re-entry and recovery planning should incorporate input from the IC/UC and/or the EOC. The status of the incident will weigh heavily on returning residents and the public to the impacted area.

Restricted re-entry into a damaged area will be at the discretion of the authority having jurisdiction.

When an evacuation has been ordered, it is recommended that the IC and the EOC establish appropriate and respective recovery functions. Planning for re-entry into an evacuated or affected area should be started early during an operation to ensure all hazards have been mitigated and there is no continuing threat to the public.

Once an incident has stabilized, the need for a damage assessment and re-establishment of basic infrastructure may affect the ability to re-occupy an area. Law enforcement should be consulted to address access limitations, traffic flows, and accountability as the area is re-populated.

The IC should consider information from all recovery partners when determining whether it is safe for the public to re-enter the affected area and how it will be done.

Once it is determined that re-entry is safe, the IC will determine how re-entry of the public into the affected area will take place. The IC will often control re-entry into the impacted area for a short period of time to ensure residents can access their properties without the area being open to the public. Public information announcements will be made regarding the re-entry operations.

A pre-established credentialing and re-entry process will allow the IC to control entry into the area, maintain scene and site security, and disseminate public information to media and evacuees promptly.

Re-entry will be scheduled by priority as listed below or at the direction of the controlling authority.

1. Emergency services, Public Works/Road and Bridge, utility and damage assessment officials
2. Residents
3. Non-resident personnel (insurance adjusters, repair personnel, etc.)
4. Unrestricted access

### **11.16 Incident Termination and Demobilize**

Once the incident has been terminated, the demobilization process of releasing resources and equipment is scalable depending on the size of the incident. The demobilization of personnel or equipment should be approved by the IC or designee and properly documented.

## **12 TRANSPORTATION RESOURCE ASSESSMENT AND NEEDS**

The ability to identify and allocate transportation resources can be an essential function during an emergency situation for the City of Glenwood Springs and Garfield County. The following agencies/organizations may be able to assist, and the procedure to request these assets is described below.

## 12.1 Roaring Fork Transportation Authority (RFTA)

The IC will request RFTA bus services either directly or through the GCECA. Contact will be made to the Transportation Director either directly or through RFTA's dispatch center. The request should include the objective, the number of buses needed, the method of communication to be used, where to report, and who to contact for further directions and assignments. Each asset used will not leave the incident assignment until the IC or designee relieves them from the incident.

## 12.2 RE-1 School District

The IC will request RE-1 bus services either directly or through the GCECA. Contact will be made to the Transportation Director. The request should include the objective, the number of buses needed, a method of communication to each driver, where to report, and who to contact for further directions and assignments. Each asset used will not leave the incident assignment until the IC or designee relieves them from the incident.

## 12.3 Rafting Companies

The IC will request bus services either directly or through the GCECA. Contact will be made to Glenwood Adventure Company and/or Blue Sky Adventures. The request should include the objective, the number of buses needed, a method of communication to each driver, where to report, and who to contact for further directions and assignments. Each asset used will not leave the incident assignment until the IC or designee relieves them from the incident.

# 13 VULNERABLE AND SPECIAL NEEDS POPULATIONS

Residents with special needs may require additional support when evacuating. Populations requiring assistance may include assisted living facilities, Valley View Hospital (VVH), isolated people with significant health and mobility concerns, or residents without transportation. Excluding the assisted living facilities and VVH, Garfield County Public Health will coordinate with organizations in the county that do home health visits to maintain an internal vulnerable population list. These organizations will be the main contacts in the event of an evacuation.

Often residents who need assistance evacuating call 911 for help. If this occurs the GCECA will advise the IC/UC who will, in turn, provide appropriate resources if possible. When activated, the EOC can assist in coordinating those requests with available local, county, state, and federal resources.

A key to successfully evacuating vulnerable populations is neighborhood preparedness. It is understood that the first and best option for evacuating those who live at home without family or transportation support will be concerned neighbors and friends.

Assisted living facilities and VVH should maintain evacuation plans for their populations. To ensure the safety of everyone, staff responsible for those facilities should not delay implementing their evacuation plans. It is recommended to issue evacuation notices early to all these types of facilities to allow time for evacuations to take place.

If an EOC is activated, it is recommended that a representative from VVH and Garfield County Public Health respond to the EOC to act as liaison and provide evacuation and incident information for those populations.

Evacuation of those without transportation should be considered a priority. Evacuee collection points may be required. In the event collection points are needed, the IC/UC shall coordinate resources for those evacuees and transport them to the nearest emergency shelter.

### 13.1 School Evacuations

There are nine public schools within the boundaries of this plan. Per city and state requirements, schools maintain emergency plans that outline their response to natural and manmade disasters. Due to the highly complex nature of evacuating a school while it is in session, the policy of most schools is to shelter their students in place whenever possible. The school districts or independent schools may order their staff to shelter in place independently or at the recommendation of the IC or the EOC. In the event a school must be evacuated, staff shall follow school policies and procedures and manage their evacuation operations following those plans.

Some schools have evacuation plans in place that identify locations to which students may be transported, see **Table 11**. Schools are responsible for activating internal emergency notification procedures for parents and staff. In the event of a school evacuation, schools are advised to notify the appropriate authorities, law enforcement, or emergency management to begin coordinating operations. This coordination will include the identification of student reunification sites, the route to reunification sites, student pick-up locations, and special instructions provided to responsible adults. The IC/UC or EOC will assist when needed or requested by the area schools. Local emergency leaders are encouraged to actively review and coordinate evacuation plans for schools within their jurisdictions. For additional information on each school, see APPENDIX G: **APPENDIX G: SCHOOL RESOURCE & CONTACT INFORMATION**.

**Table 11. School Evacuation Summary**

| School                             | Evacuation Plan (Y/N) | Transportation Needed (Y/N) | Re-Unification Sites Identified (Y/N) |
|------------------------------------|-----------------------|-----------------------------|---------------------------------------|
| Two Rivers Community School        | Y                     | N                           | Y                                     |
| Riverview K8 School                | Y                     | N                           | Y                                     |
| Glenwood Springs Middle School     | Y                     | N                           | Y                                     |
| Yampa Mountain School              | Y                     | N                           | Y                                     |
| Glenwood Springs Elementary School | Y                     | N                           | Y                                     |
| Glenwood Springs High School       | Y                     | N                           | Y                                     |
| St. Stephen Catholic School        | Y                     | Y                           | TBD                                   |
| Sopris Elementary School           | Y                     | N                           | Y                                     |
| Colorado Mountain College          | Y                     | N                           | TBD                                   |

## 13.2 Assisted Living Facilities

Residents within the boundary of the Glenwood Springs Fire Department may have functional needs that may require additional support when evacuating. Assisted living facilities should maintain evacuation plans for their residents. The need for evacuation notices to those facilities will be determined by the IC as soon as possible. This information may be provided by an Everbridge notification or direct contact from the GCECA. If needed, the IC or EOC will collaborate with each facility's emergency contact to provide pertinent information and assess the needs of that facility. To ensure residents are safe, staff responsible for those facilities should not delay implementing their evacuation plans. Assisted living facilities are listed in **APPENDIX H: VULNERABLE POPULATION FACILITIES**.

## 13.3 Valley View Hospital

Valley View Hospital (VVH) is an independent, nonprofit health system with a 21-acre medical campus with 78 beds and an additional 400,000 square feet of advanced hospital and medical offices. VVH has an active evacuation plan and will be proactive in patient removal when needed. They mobilize an internal Incident Command to start moving patients upon notification. All internal communication for VVH will be dictated by their local plan for patient tracking and notifications. Patient conditions are identified by a color code, and they will discharge many walking patients home or with family. VVH has an MOU in place with RFTA for transporting patients. The Cancer Center entrance on Blake Avenue is the main pick-up location. RFTA has a designated evacuation route utilizing 20<sup>th</sup> Street, Blake Ave., and 19<sup>th</sup> Street, see evacuation routes for details.

Ambulatory patient ground transportation will utilize the Emergency Department entrance. Ground transportation assets consist of local Fire/EMS agencies, EMS Unlimited, Eagle County Paramedics, and Aspen Valley Hospital. VVH will contact other medical facilities directly to arrange patient relocation.

Most air transport will utilize Classic Air Medical (Western Slope), Care Flight (Grand Junction and Northern CO), and Flight for Life (Front Range). Transports by air will be one patient per air ambulance. Classic and Care Flight can have 5-8 air ambulances within a one-hour time frame. Air ambulances will drop at the nearest hospital/medical center and return for more patient transports as needed. Fixed-wing transports will be from Rifle Garfield County Airport via ground transport. Coordination through air operations with air ambulance pilots will be coordinated with the IC or EOC. Air Ambulances will need to check any flight restrictions before departure.

VVH can be used as a shelter for community populations; however, this should be a last resort. Hospital surges will naturally occur during an emergency and the ability to take on a greater population is limited.

During a power outage, VVH can run for 5-6 days based on the current burn rate of generators, and if they curtail resources the facility can run for a longer period of time.

For emergency notification, call the "House Supervisor" phone at [REDACTED]. Valley View Hospital can also be contacted via DTR radio on the VVH HOSP channel, and the Emergency Manager Director can monitor [REDACTED] for direct contact.

If an EOC is set up, Valley View Hospital can send a representative to help liaison with hospital staff, priorities, and transportation issues.

### 13.4 Tourist Populations

Evacuation of the tourist population will occur with the general population, and they will self-evacuate along with the community. Some areas have detailed evacuation plans while others do not. Each tourist facility should have critical staff members signed up to receive Everbridge alerts so that they receive notifications and updates promptly. To notify non-Garfield County residents of an emergency/hazardous situation, the CGECA can be contacted by the IC to send out a text alert with a corresponding event code, i.e., GARCORADS.

Some tourist facilities may have transportation requirements, i.e., The Glenwood Adventure Park, to facilitate an evacuation. If that is the case, each facility should have a transportation plan and if additional transportation is needed, they will need to contact the IC/UC for assistance.

The Glenwood Chamber Resort Association can be used as a liaison between Everbridge emergency notifications and Glenwood Springs businesses and the visitor population. They can utilize information sharing from the IC and/or PIO to disseminate critical emergency and travel information to visitors through their website.

## 14 EMERGENCY SHELTERS / HEATING & COOLING CENTERS

Shelters must be opened as soon as possible so evacuees or those who need heating and cooling facilities may go to for information and assistance. Locations of designated shelters will be determined largely by the type and location of the event or emergency.

If it is determined that sheltering or a heating and cooling center is needed, the IC/UC can make this request through the GCECA. The IC/UC shall identify what shelter(s) will be needed, and coordinate activities with those selected shelters before designating them as “Open.” During the coordination effort, the IC or designee will determine who is the primary contact for the facility, identify what agency/organization will complete the check-in / check-out process, and coordinate other requests during sheltering operations.

Shelter location information shall be widely disseminated by the incident PIO with support from the EOC if activated.

A Heating and Cooling Center can be activated during periods of extreme heat or cold temperatures, power outages, or rolling utility blackouts. These centers provide for resident safety and a place of comfort. These types of centers provide the community restrooms, food and beverage, and information. See **APPENDIX F: SHELTERS / HEATING & COOLING CENTERS**.

## 14.1 Cooling Center Triggers and Activation

The City of Glenwood Springs monitors for any combination of anticipated prolonged power outages and excessive heat watch issued 2-3 days out (will transition to heat advisory or excessive heat warning @ 24 hours) primarily from June through mid-September with a special focus on July and August. This is a regional forecast for the Grand Valley so the city will have to interpret what it may mean locally. The city also monitors iNWS warnings and will receive a notification (24 hours in advance) from Excel/PSCO stating they need to shut down a particular power draw in the city over a certain duration of time.

The activation of a cooling center begins with the mobilization of a cooling center team. Once the team is identified, the IC is established. The IC determines action items involving public notification, estimated time frame, daily time frame, facility specifics, power grid triage, generator hook-up (if needed), logistical needs, and ongoing public information.

The IC and the consultant team will determine when to deactivate and/or demobilize a cooling center by analyzing a combination of weather patterns and anticipating the power system returning to normal.

### Sources of information for cooling center triggers and activation:

1. GWS Historical Temp Trends:  
<https://www.extremeweatherwatch.com/cities/glenwood-springs/year-2021>
2. Experimental Heat Risk: <https://www.wrh.noaa.gov/wrh/heatrisk/#close>
3. iNWS Warnings: Limited access sign up at <https://inws.ncep.noaa.gov/>
4. Combination of weather events and potential power outages

## 14.2 Heating Center Triggers and Activation

Throughout the winter months, October through March, the City of Glenwood Springs and Garfield County may experience periods of extreme cold temperatures or a loss of resources that provide heat to community members. The City of Glenwood Springs monitors the Winter Storm Severity Index and the NWS forecast and warnings. **Table 12** is the Potential Winter Storm Index. It can be used as a guide for the activation of a heating center.

The activation of a heating center begins with the mobilization of a heating center team. Once the team is identified, the IC is established. The IC determines action items involving public notification, estimated time frame, daily time frame, facility specifics, power grid triage, generator hook-up (if needed), logistical needs, and ongoing public information.

The IC and the established Glenwood Springs consultant team will determine when to deactivate and/or demobilize a heating center by analyzing a combination of weather patterns and NWS forecasting,

## 15 AFTER ACTION REVIEW AND REPORT

The primary purpose of an after-action review (AAR) is to identify successes and deficiencies in the response plan and determine necessary actions to correct the deficiencies or repeat successes. The AAR can often reveal which response procedures, equipment, and techniques were effective, which were not, and the reason(s) why. These reviews can lead to “lessons learned” and should be reflected in the response plan, training efforts, and future exercise objectives. They also create a culture of continuous performance improvement and adaptive learning.

At a minimum, AAR checklists should include:

- Type of AAR to conduct (debrief, hot wash, formal, informal, internal, external).
- Determine a lead or team to conduct the AAR.
- Conduct and compile research on the incident and review all relevant information.
- Identify key stakeholders.
- Invite stakeholders and solicit input (in person/virtual/phone).
- Develop findings, highlight successes, provide lessons learned, and make recommendations.
- Communicate findings to all stakeholders.
- Implement lessons learned and recommendations.

Scheduling and completing an AAR should be done immediately after an incident and no later than two weeks if possible. Triggers for AARs should be fluid and the request for an AAR can be requested from any invested stakeholder.

## 16 TRAINING

Training regarding the Emergency Operations / Traffic Emergency Management Plan is recommended to provide all responders and stakeholders an opportunity to refresh their knowledge and increase their awareness and capabilities. Senior leadership should work towards continuous training to assess capabilities and strategies that may lead to plan updates and revisions.

Hot washes along with table-top and functional exercises are valuable metrics of plan implementation. They offer a dual benefit of assessing the plan itself and an agency's understanding of their respective duties during plan execution. Training tools can be located in Homeland Security's "Homeland Security Exercise and Evaluation Program (HSEEP)", January 2020. [Homeland Security Exercise and Evaluation Program \(HSEEP\) \(fema.gov\)](https://www.fema.gov/hseep)

## 17 APPENDICES

## APPENDIX A: EVACUATION GUIDE

|                                                                   |                                                                                                                                                                                                                       |                                  |                                                                                                                                      |

| Special Considerations for this Zone                        | Follow access line break procedure. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County), and SH 82 at CR 154 (MP 5). Evacuate by evacuation zones based on the direction of the hazard/threat. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes.                                                                                                                                                                                                              |                            |                                                                                                                                        |
| Estimated Number of Vehicles to Evacuate (2030)             | 1,450                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                            |                                                                                                                                        |

| Special<br>Considerations for<br>this Zone                        | Red Mountain trails may have cyclists or pedestrians. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes. The 27 <sup>th</sup> Street roundabouts need to be monitored by traffic control personnel. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County) and SH 82 at CR 154 (MP 5).                                                                                                                                                                                                                                                                             |                                  |                                                                                                                   |

| <b>Special Considerations for this Zone</b>                           | Critical facilities is high in this area. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes to both I-70 and south on SH 82 towards Carbondale. Doc Holiday Trail may have pedestrians, check trailhead. Evacuate by evacuation zones based on the direction of hazard/threat. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County) and SH 82 at CR 154 (MP 5).                                                                                                                                                                                                                                                                                                                                                                                                        |                                   |                                         |
| <b>Estimated Number of Vehicles to Evacuate (2030)</b>                | 7,760                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                   |                                         |
| <b>Estimated Population (2030)</b>                                    | 4,500<br>*The population is much lower than the expected number of vehicles to evacuate due to the large amount of infrastructure and the hotels/tourist attractions in this area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                   |                                         |

## **Assumptions for Evacuation Volumes**

- Daily traffic volumes were received from the CDOT Statewide Model for 2015 and 2030.
- The average daily trips per household, as inferred from daily traffic volumes, was assumed to be 2 trips per day.
- For each group of zones, the largest 2030 one-way daily volume (BA\_DY\_FLOW) on the major road was documented; this volume was divided by the assumed average number of trips per vehicle per day (2 trips) to calculate the estimated number of vehicles that would be leaving these zones during an evacuation.
- All traffic within the evacuation zones will be completely redirected towards the designated evacuation routes.
- In the case of routes passing through both primary and secondary roads at a junction, the allocation of traffic will be determined based on engineering evaluations; most route volumes were split with primary routes accounting for 70% of the vehicles for scenario 1 and 50% of the vehicles for scenario 2.
- Evacuations of zone groups are assumed to be occurring without background traffic and not during other zone group evacuations.
- The evacuation duration was estimated based on the capacity of the major roadways in the zone groups (1,000 VPH for two-lane roads and 2,000 VPH for four-lane roads).

## **Zone Group Scenarios, Routes, Volumes, and Evacuation Durations**

Table 13: Zones 7001-7006 Evacuation Information

| Scenario   | Route                    | % of Total Traffic | # of Vehicles to Evacuate | 2-Hour Evacuation (hourly volume) | 4-Hour Evacuation (hourly volume) | Shortest Time to Evacuate (hrs) | Evacuation Duration |
|------------|--------------------------|--------------------|---------------------------|-----------------------------------|-----------------------------------|---------------------------------|---------------------|
| Scenario 1 | WB US 6 to I-70 Exit 109 | 100%               | 420                       | 210                               | 105                               | 0.42                            | 1 hour              |

Table 14: Zones 7007-7012 Evacuation Information

| Scenario   | Route                                 | % of Total Traffic | # of Vehicles to Evacuate | 2-Hour Evacuation (hourly volume) | 4-Hour Evacuation (hourly volume) | Shortest Time to Evacuate (hrs) | Evacuation Duration |

## APPENDIX B: ABBREVIATIONS AND ACRONYMS

AHJ - Authority Having Jurisdiction

CDOT - Colorado Department of Transportation

CMV - Commercial Motor Vehicle

COGS - City of Glenwood Springs

CSP - Colorado State Patrol

DTR - Digital Trunk Radio

EAS - Emergency Alert System

EMS - Emergency Medical Services

EOC - Emergency Operations Center

ES - Emergency Services

ETA - Estimated Time of Arrival

GCECA - Garfield County Emergency Communications Authority

GCR - Garfield County Road

GCSO - Garfield County Sheriff's Office

GSFD - Glenwood Springs Fire Department

GSPD - Glenwood Springs Police Department

GSPW - Glenwood Springs Public Works

IC - Incident Commander

ICP - Incident Command Post

ICS - Incident Command System

IGA - Intergovernmental Agreement

iNWS - Interactive National Weather Service

IPAWS - Integrated Public Alert & Warning System

JIC - Joint Information Center

MAC - Mutual Aid Channel

MOU - Memorandum of Understanding

NIMS - National Incident Management System

NWNET - Northwest Net

PCA - Personal Care Alternative

PIO - Public Information Officer

RFTA - Roaring Fork Transportation Authority

SH - State Highway

TIMP - Traffic Incident Management Plan

TMC - Traffic Management Center

UC - Unified Command

US - United States

VHF - Very High Frequency

VMS - Variable Message Sign

VVH - Valley View Hospital

## APPENDIX I: EVACUATION CHECK IN CHECK OUT PROCEDURES

Evacuation Center Check-in and Check-out operations will be conducted by the law enforcement agency having jurisdiction or their designee. Required check-in information will consist of the date checked in, evacuee's name, address evacuated from, number of people, contact phone number(s), special needs, and check-out date. Evacuees may be assigned to shelters based on the area of their residence.

| Check-in Date/Time | Contact Name | Address Evacuated from | Contact Phone Number | Special Needs/ Medication | Check out Date / Time | Destination |
|--------------------|--------------|------------------------|----------------------|---------------------------|-----------------------|-------------|
|                    |              |                        |                      |                           |                       |             |

## APPENDIX M: RECOMMENDATIONS AND OPPORTUNITIES

Resulting from the development of this plan recommendations are summarized as the following:

- Identify an Emergency Operations Center (EOC) location for the City of Glenwood Springs.
- Enhance local response capabilities through improved communications, equipment, and training.
- Continue to pursue a second bridge to access SH 82 which will help manage traffic from the southern end of the city to help serve communities on 4-Mile Road, 3-Mile Road, and South Glenwood Springs.
- Conduct community outreach activities to raise awareness of evacuation and sheltering actions for individuals and the community.
- Work to expand the City of Glenwood Springs' agreement with RFTA (Ride Glenwood) to include the use of RFTA buses in an emergency situation or establish an MOU/IGA.
- Research the use of Salamander as a credentialing system.
- Identify additional locations for Public Works to store key traffic control devices (cones, barrels, barricades) for quick access to critical traffic control locations.
- Explore funding for additional DTR portable radios to be deployed on an as-needed basis or convert Public Works over to the DTR System.
- Develop a community poster to display in public buildings (post office) referencing alternate routes, evacuation routes, Everbridge sign-up information, and general safety information about this plan and the Garfield TIMP.
- Explore a digital sign-up for the Everbridge Emergency Notification System.
- Research and identify cell phone coverage gaps on 4-Mile Road.
- Disseminate Everbridge Emergency Notification System cards to area businesses.
- Review the special event application process to include a safety/medical plan for event coordinators.
- Conduct a special meeting with the Glenwood Chamber Resort Association to enhance community and business information sharing.
- Critical infrastructures that are critical for traffic management should be further investigated to provide better traffic flow, i.e., 27<sup>th</sup> Street roundabouts.
- After action review (AAR) triggers should be discussed and documented by agency leads to create a culture of continuous improvement.

## **Document Accessibility**

If you are having issues accessing any portion of the content or functionality of this document, please contact us at [ADAteam@cogs.us](mailto:ADAteam@cogs.us) or 970-384-6441.

### **Accessibility Policy**

The City of Glenwood Springs ensures meaningful access to City programs, services, and activities to comply with the Americans with Disabilities Act (ADA) and reasonably provides: translation, interpretation, modifications, accommodations, alternative formats, auxiliary aids, and services. To request these services, email [ADAteam@cogs.us](mailto:ADAteam@cogs.us) or call 970-384-6441. Please submit requests as soon as possible but no later than three business days (Monday-Thursday, excludes holidays) before scheduled events.

| Special Considerations for this Zone                        | Follow access line break procedure. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County), and SH 82 at CR 154 (MP 5). Evacuate by evacuation zones based on the direction of the hazard/threat. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes.                                                                                                                                                                                                        |                            |                                                                                                                                        |

| Special Considerations for this Zone                        | Follow access line break process. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County) and SH 82 at CR 154 (MP 5). Evacuate by evacuation zones based on the direction of hazard/threat. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes.                                                                                                                                                                                                                 |                            |                                                                                                                             |
| Estimated Number of Vehicles to Evacuate (2030)             | 2,070                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                            |                                                                                                                             |

| Special<br>Considerations for<br>this Zone                        | Trails behind Glenwood Meadows may have cyclists or pedestrians. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes. Traffic control may be needed to access I-70 at Exit 114 (West Glenwood) and Exit 116 (Glenwood). It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County) and SH 82 at CR 154 (MP 5). |                                  |                                   |

| Special<br>Considerations for<br>this Zone                           | Red Mountain trails may have cyclists or pedestrians. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes. The 27 <sup>th</sup> Street roundabouts need to be monitored by traffic control personnel. It may be necessary to close I-70 EB at Exit 109 (Canyon Creek) and WB at Exit 119 (No Name), Exit 133 (Dotsero in Eagle County) and SH 82 at CR 154 (MP 5).                                                                                                                                                                                                                                                                              |                                  |                                                                                                                   |

| Special<br>Considerations for<br>this Zone                           | The 27 <sup>th</sup> Street roundabouts need to be monitored by traffic control personnel. GCR 125 (Dry Park Road) may be impassable dependent on road and weather conditions. Evacuation may require a split of egress traffic on both the primary and alternate evacuation routes to I-70, south on SH 82 towards Carbondale, and on GCR 125 towards Carbondale.                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                  |                                                                                                                                                                                                              |
| Estimated Number<br>of Vehicles to<br>Evacuate (2030)                | 1,090                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                  |                                                                                                                                                                                                              |
| Estimated<br>Population (2030)                                       | Unknown                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                  |                                                                                                                                                                                                              |

# GLENWOOD SPRINGS EVACUATION GUIDE

# GLENWOOD SPRINGS EVACUATION GUIDE

## Assumptions for Evacuation Volumes

- Daily traffic volumes were received from the CDOT Statewide Model for 2015 and 2030.
- The average daily trips per household, as inferred from daily traffic volumes, was assumed to be 2 trips.
- For each group of zones, the largest 2030 one-way daily volume (BA\_DY\_FLOW) on the major road was documented; this volume was divided by the assumed average number of trips per vehicle per day (2 trips) to calculate the estimated number of vehicles that would be leaving these zones during an evacuation.
- All traffic within the evacuation zones will be completely redirected towards the designated evacuation routes.
- In the case of routes passing through both primary and secondary roads at a junction, the allocation of traffic will be determined based on engineering evaluations; most route volumes were split with primary routes accounting for 70% of the vehicles for scenario 1 and 50% of the vehicles for scenario 2.
- Evacuations of zone groups are assumed to be occurring without background traffic and not during other zone group evacuations.
- The evacuation duration was estimated based on the capacity of the major roadways in the zone groups (1,000 VPH for two-lane roads and 2,000 VPH for four-lane roads).

## Zone Group Scenarios, Routes, Volumes, and Evacuation Durations

Table 1: Zones 7001-7006 Evacuation Information

| Scenario   | Route                    | % of Total Traffic | # of Vehicles to Evacuate | 2-Hour Evacuation (hourly volume) | 4-Hour Evacuation (hourly volume) | Shortest Time to Evacuate (hrs) | Evacuation Duration |
|------------|--------------------------|--------------------|---------------------------|-----------------------------------|-----------------------------------|---------------------------------|---------------------|
| Scenario 1 | WB US 6 to I-70 Exit 109 | 100%               | 420                       | 210                               | 105                               | 0.42                            | 1 hour              |

Table 2: Zones 7007-7012 Evacuation Information

| Scenario   | Route                                 | % of Total Traffic | # of Vehicles to Evacuate | 2-Hour Evacuation (hourly volume) | 4-Hour Evacuation (hourly volume) | Shortest Time to Evacuate (hrs) | Evacuation Duration |
|------------|---------------------------------------|--------------------|---------------------------|-----------------------------------|-----------------------------------|---------------------------------|---------------------|

# Glenwood Springs

## Emergency Operations / Traffic Emergency Management Plan

Prepared for:

City of Glenwood Springs

Prepared by:

# Outreach

---

- In 2023 City commissioned an evacuation plan through outside contractor
- May 2024 plan was presented to the Council
- The evacuation plan was made available at the FD open house – Spring 2024
- A community meeting was offered/held at the Recreation Center – Sept. 2024
- Materials available on the FD web site
- May look for another opportunity for community meeting

# Public Expectations

- There is no water system in the U.S. that could've effectively handled the L.A. fires
- In a conflagration and very high wind driven event it is difficult to keep up (i.e. Louisville, CO Fires)
- As you continue to open hydrants that affects other hydrants, pressures etc.
- Large diameter pipes required in order to sufficiently provide resources to fight the fire
- In turn that compromises the pressures needed to effectively address fires – may have to shut off water to other neighborhoods

# Public safety training/Preparedness

- This last Tues. Pub. Safety Chief and Dep. Chief attended training with Federal, state, Garfield, Larimer, and Mesa county fire authorities
- Understanding of each FD and agency responsibilities/costs
- Included County emergency managers, Communications personnel and stakeholders
- This occurs annually in preparation of fire season/wildland fires
- Ensures mutual aid and other agreements are current

# Water access

Widely reported LA fire crews challenged with limited water sources:

GWS hosts several water tanks/sources

Many of these exceed 1 million gallons of water and others north of 500,000 gallons of water

Water Dept. has ability to re direct, shut off zones to allow for more directed water and pressure to a fire scene

City has more than 700 hydrants and large capacity tanks supported by water plant and equipment (tenders etc)

## City of Glenwood Springs Facility Flows

# Coverage area

---

- GSFD covers 72 square miles
  - Typical staffing is:
  - 8 Firefighters and 1 Battalion Chief
  - That includes Paramedics/EMT's
- 

**Figure 7. Evacuation Zones**  
[Glenwood Springs Evacuation Zones](#)

# Polygons

- Incident commander determines evac zones by polygons
- Communications staff messages this to affected neighborhoods
- Law Enforcement/Public works initiates evac and traffic egress

# Next steps

PUBLIC SAFETY PERSONNEL AND  
PUBLIC WORKS STAFF TO WORK  
THROUGH TABLETOP EXERCISES IN  
PREPARATION

A- LINE BREAKS ARE IN PLACE

PUBLIC WORKS STAFF TO PROCURE  
DEDICATED MATERIALS FOR EVACS IN  
STORAGE AT THE M.O.C.

## APPENDIX E: AREAS OF REFUGE / SAFE ZONES

| #  | Areas of Refuge                      |
|----|--------------------------------------|
| 1  | New Creation Church                  |
| 2  | CPW Office                           |
| 3  | Orchard Creek Ranch                  |
| 4  | Canyon Creek Estates                 |
| 5  | South Canyon Landfill                |
| 6  | Upper Mitchell Creek Open Ranch Land |
| 7  | Diemoz Pasture                       |
| 8  | Glenwood Springs Mall                |
| 9  | GSMS Ball Fields                     |
| 10 | Glenwood Springs Golf Club           |
| 11 | Highlands Ranchland                  |
| 12 | Meadows Mall                         |
| 13 | Oasis Creek Park                     |
| 14 | Transfer Trail Parking               |
| 15 | Two Rivers Park                      |

| 30 | Oak Meadows Park & Tennis Court      |
| 31 | Dry Park Road                        |
| 32 | Bersheni Ranch                       |
| 33 | Sunlight Ski Area                    |

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Ordinance 2025-04; Model Traffic Code Cell Phones

**Action Requested:** Adopt on First Reading

**Department:** Police Department

**Presented By:** Karl Hanlon

**Strategic Goals:** Ensure Public Safety

**Background Info:** Last year the General Assembly enacted SB24-065 which prohibits the use of a mobile device such as a cell phone while operating a motor vehicle. The City has duly adopted the 2020 version of the Model Traffic Code which gives the City the authority to enforce state rules of the road. With the addition of this provision to the City's version of the Model Traffic Code, it can now enforce the prohibition of mobile device use while operating a motor vehicle.

**Issues:** Public Safety and Conforming with State Law

**Fiscal Impact:** N/A

**Legal Review:** Drafted by City Attorney

**Staff Recommendation:** Approve on First Reading

## ORDINANCE NO. 4

Series of 2025

### **AN ORDINANCE OF THE CITY OF GLENWOOD SPRINGS, COLORADO, AMENDING SECTION 120.040.020 OF THE GLENWOOD SPRINGS MUNICIPAL CODE TO PROHIBIT USE OF A MOBILE DEVICE WHILE DRIVING.**

**WHEREAS**, the City of Glenwood Springs (“Glenwood Springs” or the “City”) is a home-rule municipality organized under Article XX of the Colorado Constitution and with the authority of the Glenwood Springs Home Rule Charter (the “Charter”); and

**WHEREAS**, Section 120.040.020 of the Glenwood Springs Municipal Code (the “Code”) sets forth local additions, deletions, or modifications to the Model Traffic Code; and

**WHEREAS**, the State passed a law, Section 42-4-239, C.R.S., effective January 1, 2025, that regulates the use of a mobile electronic device while operating a motor vehicle; and

**WHEREAS**, City Staff has recommended adopting this new law and adding it to the local additions, deletions, or modifications to the Model Traffic Code under Section 120.040.020 of the Code; and

**WHEREAS**, the City Council finds and declares that the Code amendments as set forth in **Exhibit A** attached hereto and incorporated by this reference are necessary to protect the health, safety, and welfare of the citizens of the City.

### **NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENWOOD SPRINGS, COLORADO, ORDAINS:**

**Section 1.**     **Recitals.** The foregoing recitals are incorporated herein as if set forth in full.

**Section 2.**     **Amendments.** The Code is hereby amended as set forth in the attached **Exhibit A**.

INTRODUCED, READ ON FIRST READING, PASSED AND ORDERED PUBLISHED BY  
TITLE ONLY THIS \_\_\_\_ DAY OF \_\_\_\_\_ 2025.

## EXHIBIT A

The following sections of the Municipal Code are amended as follows with double underlined text added and ~~strike through text~~ deleted.

### TITLE 120 – CRIMINAL PROVISIONS

#### ARTICLE 120.010 – TRAFFIC REGULATIONS

#### ARTICLE 120.040 – Additions, deletions, or modifications to the Model Traffic Code.

\* \* \* \*

- (2) Part ~~62~~, Subsection 225(3) of the Model Traffic Code is hereby amended as follows:

"(3) Any person who violates subsection (1) of this section commits a class B traffic infraction. Any person who violates subsection (1.5) of this section shall, upon conviction, be punished by a fine of five hundred dollars (\$500.00)."

- (2.5) Part 2, Section 239 of the Model Traffic Code is hereby replaced by the text of Section 42-4-239 C.R.S. effective January 1, 2025, as follows:

Section 239. Use of a mobile electronic device - definitions - penalty.

- (1) As used in this section, unless the context otherwise requires:

(a) "Emergency" means a circumstance in which an individual:

- (I) Has reason to fear for the individual's life or safety or believes that a criminal act may be perpetrated against the individual or another individual, requiring the use of a mobile electronic device when the individual is driving a motor vehicle; or
- (II) Reports a fire, a traffic accident in which one or more injuries are apparent, a serious road hazard, a medical or hazardous materials emergency, or an individual who is driving in a reckless, careless, or unsafe manner.

(b) "First responder" means:

- (I) A peace officer, as described in section 16-2.5-101;
- (II) A firefighter, as defined in section 29-5-203 (10);
- (III) A volunteer firefighter, as defined in section 31-30-1102 (9)(a);
- (IV) An emergency medical service provider, as defined in section 25-3.5-103 (8); or
- (V) Any other individual who responds in a professional capacity to a public safety emergency.

(c) "Hands-free accessory" means an accessory with a feature or function that enables an individual to use a mobile electronic device without using either hand, except to activate, deactivate, or initiate the feature or function with a single touch or single swipe.

(d) (I) "Mobile electronic device" means a handheld or portable electronic device capable of providing voice communication between two or more persons, amusement, or the wireless transfer of data.

(II) "Mobile electronic device" does not include:

(A) A radio, citizens band radio, or citizens band radio hybrid;

(B) A commercial two-way radio communication device or its functional equivalent;

(C) A subscription-based emergency communication device;

(D) A prescribed medical device;

(E) An amateur or ham radio device; or

(F) Systems that are designed for and installed within the vehicle's electronics, such as an in-vehicle security, navigation, communications, or remote diagnostics system.

(e) "Operating a motor vehicle" means driving a motor vehicle on a public highway. "Operating a motor vehicle" does not include maintaining the instruments of control of a motor vehicle while the motor vehicle is at rest in a shoulder lane or lawfully parked.

(f) "Use" or "using" means:

(I) Physically holding a mobile electronic device in the driver's hand or pinning a mobile electronic device to a driver's ear to conduct voice-based communication; except that an individual may use a speaker or other listening device that is built into protective headgear or a device or portion of a device that only covers all or a portion of one ear and that is connected to a wireless, handheld telephone as provided in section 42-4-1411;

(II) Watching a video or movie on a mobile electronic device, other than watching data related to the navigation of the motor vehicle; or

(III) Writing, sending, or reading text-based communication, including a text message, instant message, e-mail, or internet data, on a mobile electronic device; except that text-based communication does not include:

(A) A voice-based communication that is automatically converted by the mobile electronic device to be sent as a message in written form; or

(B) Communication concerning the navigation of a motor vehicle.

(2) Except as specified in subsection (3) of this section, an individual shall not use a mobile electronic device while operating a motor vehicle.

(3) It is not a violation of subsection (2) of this section to use a mobile electronic device:

(a) To contact a public safety entity;

(b) During an emergency;

(c) When an employee or contractor of a utility is acting within the scope of the employee's or contractor's duties when responding to a utility emergency;

(d) When an employee or contractor of a city or county is acting within the scope of the employee's or contractor's duties as a code enforcement officer or animal protection officer; or

(e) During the performance of a first responder's official duties.

- (4) (a) Except as provided in subsection (4)(b) of this section, an individual who violates this section commits a class A traffic infraction, and the court shall assess a penalty as follows:
- (I) A fine of seventy-five dollars and a surcharge of ten dollars for the first offense within the immediately preceding twenty-four months;
  - (II) A fine of one hundred fifty dollars and a surcharge of ten dollars for the second offense within the immediately preceding twenty-four months; or
  - (III) A fine of two hundred fifty dollars and a surcharge of ten dollars for the third or subsequent offense within the immediately preceding twenty-four months.
- (b) (I) An individual charged with violating subsection (2) of this section shall not be convicted if the individual:
- (A) Produces a hands-free accessory or proof of purchase of a hands-free accessory; and
  - (B) Affirms under penalty of perjury that the individual has not previously had a charge dismissed under this subsection (4)(b).
- (II) The court clerk may dismiss the charge if the clerk verifies that the individual has complied with both subsections (4)(b)(I)(A) and (4)(b)(I)(B) of this section.
- (c) If the individual's actions are the proximate cause of bodily injury to another, the individual commits a class 1 misdemeanor traffic offense and shall be punished as provided in section 42-4-1701 (3)(a)(II).
- (d) If the individual's actions are the proximate cause of death to another, the individual commits a class 1 misdemeanor traffic offense and shall be punished as provided in section 42-4-1701 (3)(a)(II).
- (5) This section does not apply to an individual with a commercial driver's license who is operating a commercial vehicle.
- (6) An individual operating a motor vehicle shall not be cited for a violation of subsection (2) of this section unless a law enforcement officer saw the individual use a mobile electronic device in a manner that caused the individual to drive in a careless and imprudent manner, without due regard for the width, grade, curves, corners, traffic, and use of the streets and highways and all other attendant circumstances, as prohibited by section 42-4-1402.
- (7) This section does not authorize the seizure and forfeiture of a mobile electronic device, unless otherwise provided by law.

**City Council**  
**STAFF REPORT**  
**City of Glenwood Springs**  
**February 6, 2025**

**Agenda Item:** Financial Advisory Board (FAB) Grant Direction

**Action Requested:** Expecting more requests than money, FAB has asked for Council direction on funding preferences.,

**Department:** City Administration

**Presented By:** Steve Boyd

**Strategic Goals:** Protect and Preserve our Quality of Life

**Background Info:** Anything Council wants is on the table, a couple of specific questions:  
1. Does Council want to award money for Summer of Music and/or Strawberry Days off the top?  
2. Would you like to have a time limit? For example we don't fund more than three years so that no one other than the two above starts to count on this as part of their operating budget.  
3. Are there causes you would like FAB to not fund or limit funding for this year?

**Issues:** NA

**Fiscal Impact:** Roughly \$201,000 is available in the A&I Fund and \$81,250 in Tourism.

**Legal Review:** NA

**Staff Recommendation:** NA
